Notation

Rubem Vasconcelos Pacelli rubem.engenharia@gmail.com

Department of Teleinformatics Engineering, Federal University of Ceará. Fortaleza, Ceará, Brazil. Version: May 3, 2023

Font notation

$a, b, c, \ldots, A, B, C, \ldots$	Scalars
a, b, c, \dots	Vectors
A, B, C, \dots	Matrices
A, B, C, \dots	Tensors
$A, B, C, \ldots, A, B, C, \ldots, A, B, C, \ldots$	Sets

2 Signals and functions

2.1 Time indexing

1

x(t)	Continuous-time t
$x[n], x[k], x[m], x[i], \dots$	Discrete-time n, k, m, i, \ldots (parenthe-
$x_n, x_k, x_m, x_i, \dots$	sis should be adopted only if there
$x(n), x(k), x(m), x(i), \dots$	are no continuous-time signals in the
	context to avoid ambiguity)
$x[((n-m))_N], x((n-m))_N$	Circular shift in m samples within a
	N-samples window [11, 15]

2.2 Common functions

$\delta(t)$	Delta function
$\delta[n], \delta_{i,j}$	Kronecker function $(n = i - j)$
h(t), h[n]	Impulse response (continuous and
	discrete time)

$\tilde{x}[n], \tilde{x}(t)$	Periodic discrete- or continuous-time
	signal
$\hat{x}[n], \hat{x}(t)$	Estimate of $x[n]$ or $x(t)$
$\dot{x}[m]$	Interpolation of $x[n]$

2.3 Operations and symbols

$f:A\to B$	A function f whose domain is A and codomain is B
$\mathbf{f}:A\to\mathbb{R}^n$	A vector-valued function \mathbf{f} , i.e., $n \ge 2$
$f^n, x^n(t), x^n[k]$	<i>n</i> th power of the function f , $x[n]$ or $x(t)$
$f^{(n)}, x^{(n)}(t)$	nth derivative of the function f or $x(t)$
$f', f^{(1)}, x'(t)$	1th derivative of the function f or $x(t)$
$f'', f^{(2)}, x''(t)$	2th derivative of the function f or $x(t)$
$\underset{x \in A}{\operatorname{arg max}} f(x)$	Value of x that minimizes x
$ \frac{x \in \mathcal{A}}{\arg\min f(x)} $ $ x \in \mathcal{A} $	Value of x that minimizes x
$\frac{\mathbf{x} \in \mathcal{A}}{f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})}$	Infimum, i.e., $f(\mathbf{x}) = \min \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\},$ which is the greatest lower bound of this set [3]
$f(\mathbf{x}) = \sup_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$	Supremum, i.e., $f(\mathbf{x}) = \max\{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\},$ which is the least upper bound of this set [3]
$f \circ g$	Composition of the functions f and g
*	Convolution (discrete or continuous)
*, N	Circular convolution [7, 15]

2.4 Transformations

W_N	Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [11]
$\mathcal{F}\left\{\cdot\right\}$	Fourier transform
$\mathcal{L}\left\{ \cdot \right\}$	Laplace transform
$\overline{\mathcal{Z}\left\{ \cdot \right\}}$	z-transform
$\hat{x}(t), \hat{x}[n]$	Hilbert transform of $x(t)$ or $x[n]$

T7 ()	T 1 (C ()
X(s)	Laplace transform of $x(t)$
X(f)	Fourier transform (FT) (in linear fre-
	quency, Hz) of $x(t)$
$X(j\omega)$	Fourier transform (FT) (in angular
	frequency, rad/sec) of $x(t)$
$X(e^{j\omega})$	Discrete-time Fourier transform
	(DTFT) of $x[n]$
$X[k], X(k), X_k$	Discrete Fourier transform (DFT) or
	fast Fourier transform (FFT) of $x[n]$,
	or even the Fourier series (FS) of the
	periodic signal $x(t)$
$\widetilde{X}[k], \widetilde{X}(k), \widetilde{X}_k$	Discrete Fourier series (DFS) of $\tilde{x}[n]$
X(z)	z-transform of $x[n]$

3 Probability, statistics, and stochastic processes

3.1 Operators and symbols

$\mathrm{E}\left[\cdot ight],\mathbf{E}\left[\cdot ight],E\left[\cdot ight]$	Statistical expectation operator [6,
	14]
$\mathbf{E}_{u}\left[\cdot\right],\mathbf{E}_{u}\left[\cdot\right],E_{u}\left[\cdot\right],\mathbb{E}_{u}\left[\cdot\right]$	Statistical expectation operator with
	respect to u
$\overline{\langle \cdot \rangle}$	Ensamble average
$\operatorname{var}\left[\cdot\right], \operatorname{VAR}\left[\cdot\right]$	Variance operator [2, 10, 13, 17]
$\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$	Variance operator with respect to u
$cov[\cdot], COV[\cdot]$	Covariance operator [2]
$\operatorname{cov}_{u}[\cdot], \operatorname{COV}_{u}[\cdot]$	Covariance operator with respect to
	и
μ_x	Mean of the random variable x
μ_{x}, m_{x}	Mean vector of the random variable
	x [4]
μ_n	nth-order moment of a random vari-
	able
$\frac{\sigma_x^2, \kappa_2}{\mathcal{K}_x, \mu_4}$	Variance of the random variable x
\mathcal{K}_x, μ_4	Kurtosis (4th-order moment) of the
	random variable x
κ_n	nth-order cumulant of a random vari-
	able
$\rho_{x,y}$	Pearson correlation coefficient be-
	tween x and y
$a \sim P$	Random variable a with distribution
	P
$\overline{\mathcal{R}}$	Rayleigh's quotient

3.2 Stochastic processes

$r_X(au), R_X(au)$	Autocorrelation function of the signal
	x(t) or $x[n]$ [14]
$S_x(f), S_x(j\omega)$	Power spectral density (PSD) of $x(t)$
	in linear (f) or angular (ω) frequency
$S_{x,y}(f), S_{x,y}(j\omega)$	Cross PSD of $x(t)$ and $y(t)$ in linear
	or angular (ω) frequency
R _x	(Auto)correlation matrix of $\mathbf{x}(n)$
$r_{x,d}(\tau), R_{x,d}(\tau)$	Cross-correlation between $x[n]$ and
	d[n] or $x(t)$ and $d(t)$ [14]
R _{xy}	Cross-correlation matrix of $\mathbf{x}(n)$ and
	$\mathbf{y}(n)$
$\mathbf{p}_{\mathbf{x}d}$	Cross-correlation vector
	between $\mathbf{x}(n)$ and $d(n)$
	[dinizAdaptiveFiltering1997]
$c_x(\tau), C_x(\tau)$	Autocovariance function of the signal
	x(t) or $x[n]$ [14]
$\mathbf{C}_{\mathbf{x}}, \mathbf{K}_{\mathbf{x}}, \mathbf{\Sigma}_{\mathbf{x}}, \operatorname{cov}\left[\mathbf{x}\right]$	(Auto)covariance matrix of x [10, 13,
	17, 22
$c_{xy}(\tau), C_{xy}(\tau)$	Cross-covariance function of the sig-
	nal x(t) or x[n] [14]
$C_{xy}, K_{xy}, \Sigma_{xy}$	Cross-covariance matrix of \mathbf{x} and \mathbf{y}

3.3 Functions

$Q(\cdot)$	Q-function, i.e., $P[\mathcal{N}(0,1) > x]$ [17]
$erf(\cdot)$	Error function [17]
$erfc(\cdot)$	Complementary error function i.e.,
	$\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x)$ [17]
P[A]	Probability of the event or set A [13]
$p(\cdot), f(\cdot)$	Probability density function (PDF)
	or probability mass function (PMF)
	[13]
$p(x \mid A)$	Conditional PDF or PMF [13]
$F(\cdot)$	Cumulative distribution function
	(CDF)
$\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$	First characteristic
	function (CF) of x
	$[the odorid is Machine Learning Bayesian {\bf 2020} a,$
	17]

$M_X(t), \Phi_X(-jt), E[e^{tX}]$	Moment-generating	func-	
	tion (MGF)	of x	
	[theodoridisMachineI	LearningBayesi	an2020a,
	17]		
$\Psi_x(\omega), \ln \Phi_x(\omega), \ln E\left[e^{j\omega x}\right]$	Second characteristic fur	nction	
$K_x(t), \ln E\left[e^{tx}\right], \ln M_x(t)$	Cumulant-generating	function	
	(CGF) of x [10]		

3.4 Distributions

$\mathcal{N}(\mu,\sigma^2)$	Gaussian distribution of a random variable with mean μ and variance σ^2 . The same notation can be used to denote a real-valued white Gaussian process with mean equal to μ and power spectral density equal to $N_0/2$, e.g., $s(t) \sim \mathcal{N}(\mu, N_0/2)$
$\mathcal{CN}(\mu, \sigma^2)$	Complex Gaussian distribution of a
(4., 5.)	random variable with mean μ and
	variance σ^2 . The same notation can
	be used to denote a complex-valued
	white Gaussian process with mean
	equal to μ and power spectral density
	equal to N_0 , e.g., $s(t) \sim \mathcal{CN}(\mu, N_0)$
$\mathcal{N}(oldsymbol{\mu}, oldsymbol{\Sigma})$	Gaussian distribution of a vector ran-
	dom variable with mean μ and co-
	variance matrix Σ
$\mathcal{CN}(oldsymbol{\mu}, oldsymbol{\Sigma})$	Complex Gaussian distribution of a
	vector random variable with mean μ
	and covariance matrix Σ
$\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$	Uniform distribution from a to b
$\chi^2(n), \chi_n^2$	Chi-square distribution with n degree
	of freedom (assuming that the Gaus-
	sians are $\mathcal{N}(0,1)$)
$\operatorname{Exp}(\lambda)$	Exponential distribution with rate
	parameter λ
$\Gamma(lpha,oldsymbol{eta})$	Gamma distribution with shape pa-
	rameter α and rate parameter β
$\Gamma(lpha, heta)$	Gamma distribution with shape pa-
	rameter α and scale parameter θ =
	$1/\beta$

$\operatorname{Nakagami}(m,\Omega)$	Nakagami-m distribution with shape
	parameter or fading figure m and
	spread, scale, or shape parameter Ω
Rayleigh(σ)	Rayleigh distribution with scale pa-
	rameter σ
$Rayleigh(\Omega)$	Rayleigh distribution with the second
	moment $\Omega = E[x^2] = 2\sigma^2$
$\overline{\mathrm{Rice}(s,\sigma)}$	Rice distribution with noncentrality
	parameter s and σ . s^2 represent the
	specular component power
Rice(A, K)	Rice distribution with Rice factor
	$K = s^2/2\sigma^2$ and scale parameter $A =$
	$s^2 + 2\sigma^2$

4 Statistical signal processing

$\frac{\nabla f, \mathbf{g}}{\nabla_{\mathbf{x}} f, \mathbf{g}_{\mathbf{x}}}$	Gradient descent vector
$\nabla_x f, \mathbf{g}_x$	Gradient descent vector with respect
	x
\mathbf{g} (or $\hat{\mathbf{g}}$ if the gradient vector is \mathbf{g})	Stochastic gradient descent (SGD)
$J(\cdot), \mathcal{E}(\cdot)$	Cost-function or objective function
$\Lambda(\cdot)$	Likelihood function
$\Lambda_l(\cdot)$	Log-likelihood function
$\hat{x}(t)$ or $\hat{x}[n]$	Estimate of $x(t)$ or $x[n]$
$\hat{\boldsymbol{\mu}}_{\scriptscriptstyle \mathcal{X}},\hat{\mathbf{m}}_{\scriptscriptstyle \mathcal{X}}$	Sample mean of $x[n]$ or $x(t)$
$\frac{\hat{\boldsymbol{\mu}}_{x}, \hat{\mathbf{m}}_{x}}{\hat{\boldsymbol{\mu}}_{x}, \hat{\mathbf{m}}_{x}}$ $\hat{r}_{x}(\tau), \hat{R}_{x}(\tau)$	Sample mean vector of $\mathbf{x}[n]$ or $\mathbf{x}(t)$
$\hat{r}_{\scriptscriptstyle X}(au), \hat{R}_{\scriptscriptstyle X}(au)$	Estimated autocorrelation function
	of the signal $x(t)$ or $x[n]$
$\hat{S}_{x}(f), \hat{S}_{x}(j\omega)$	Estimated power spectral density
	(PSD) of $x(t)$ in linear (f) or angular
	(ω) frequency
$\hat{\mathbf{R}}_{\mathbf{x}}$	Sample (auto)correlation matrix
$\hat{r}_{x,d}(au), \hat{R}_{x,d}(au)$	Estimated cross-correlation between
	x[n] and $d[n]$ or $x(t)$ and $d(t)$
$\hat{S}_{x,y}(f), \hat{S}_{x,y}(j\omega)$	Estimated cross PSD of $x(t)$ and $y(t)$
	in linear or angular (ω) frequency
$\hat{\mathbf{R}}_{\mathbf{x}\mathbf{y}}$	Sample cross-correlation matrix of
-	$\mathbf{R}_{\mathbf{x}\mathbf{y}}$
$\hat{ ho}_{x,y}$	Estimated Pearson correlation coeffi-
	cient between x and y

$\hat{c}_x(\tau), \hat{C}_x(\tau)$	Estimated autocovariance function of
	the signal $x(t)$ or $x[n]$
$\frac{\hat{\mathbf{C}}_{\mathbf{x}}, \hat{\mathbf{K}}_{\mathbf{x}}, \hat{\boldsymbol{\Sigma}}_{\mathbf{x}}}{\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)}$	Sample (auto)covariance matrix
$\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)$	Estimated cross-covariance function
	of the signal $x(t)$ or $x[n]$
$\hat{\mathbf{C}}_{\mathrm{xy}}, \hat{\mathbf{K}}_{\mathrm{xy}}, \hat{\mathbf{\Sigma}}_{\mathrm{xy}}$	Sample cross-covariance matrix
w, θ	Parameters, coefficients, or weights
	vector
$\mathbf{w}_o, \mathbf{w}^{\star}, \mathbf{\theta}_o, \mathbf{\theta}^{\star}$	Optimum value of the parameters,
	coefficients, or weights vector
W	Matrix of the weights
J	Jacobian matrix
H	Hessian matrix
Ĥ	Estimate of the Hessian matrix

5 Linear Algebra

5.1 Common matrices and vectors

W, D	Diagonal matrix
P	Projection matrix; Permutation ma-
	trix
J	Jordan matrix
L	Lower matrix
U	Upper matrix
$\overline{\mathbf{C}}$	Cofactor matrix
$\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$	Cofactor matrix of A
S	Symmetric matrix
Q	Orthogonal matrix
\mathbf{I}_N	$N \times N$ -dimensional identity matrix
$0_{M imes N}$	$M \times N$ -dimensional null matrix
0_N	N-dimensional null vector
$1_{M \times N}$	$M \times N$ -dimensional ones matrix
1_N	N-dimensional ones vector
0	Null matrix, vector, or tensor (di-
	mensionality understood by context)
1	Ones matrix, vector, or tensor (di-
	mensionality understood by context)

5.2 Indexing

$x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$	Element in the position
	(i_1, i_2, \ldots, i_N) of the tensor \mathcal{X}
$\mathcal{X}^{(n)}$	nth tensor of a nontemporal sequence
$\mathbf{x}_n, \mathbf{x}_{:n}$	nth column of the matrix X
\mathbf{x}_{n} :	nth row of the matrix X
$\mathbf{x}_{i_1,,i_{n-1},:,i_{n+1},,i_N}$	Mode- n fiber of the tensor \mathcal{X}
$X_{:,i_2,i_3}$	Column fiber (mode-1 fiber) of the
	thrid-order tensor \mathcal{X}
$X_{i_1,:,i_3}$	Row fiber (mode-2 fiber) of the thrid-
	order tensor \mathcal{X}
$X_{i_1,i_2,:}$	Tube fiber (mode-3 fiber) of the
	thrid-order tensor \mathcal{X}
$X_{i_1,:,:}$	Horizontal slice of the thrid-order
	tensor \mathcal{X}
$\mathbf{X}_{:,i_2,:}$	Lateral slices slice of the thrid-order
	tensor \mathcal{X}
$\mathbf{X}_{i_3}, \mathbf{X}_{:,:,i_3}$	Frontal slices slice of the thrid-order
	tensor \mathcal{X}

5.3 General operations

$\left\langle \mathbf{a},\mathbf{b} ight angle ,\mathbf{a}^{ op}\mathbf{b},\mathbf{a}\cdot\mathbf{b}$	Inner or dot product
$\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{ op}$	Outer product
\otimes	Kronecker product
· ·	Hadamard (or Schur) (elementwise)
	product
.⊙n	nth-order Hadamard power
$\circ \frac{1}{n}$	nth-order Hadamard root
Ø	Hadamard (or Schur) (elementwise)
	division
♦	Khatri-Rao product
\otimes	Kronecker Product
\times_n	<i>n</i> -mode product

5.4 Operations with matrices and tensors

\mathbf{A}^{-1}	Inverse matrix
$\mathbf{A}^+, \mathbf{A}^\dagger$	Moore-Penrose left pseudoinverse
\mathbf{A}^{T}	Transpose
$\mathbf{A}^{-\top}$	Transpose of the inverse, i.e.,
	$(\mathbf{A}^{-1})^{\top} = (\mathbf{A}^{\top})^{-1} [8, 16]$
A *	Complex conjugate

H	TT 111
A ^H	Hermitian
$\left\ \mathbf{A} ight\ _{ ext{F}}$	Frobenius norm
$\ \mathbf{A}\ $	Matrix norm
$ \mathbf{A} , \det(\mathbf{A})$	Determinant
$\operatorname{diag}\left(\mathbf{A}\right)$	The elements in the diagonal of $\bf A$
E [A]	Vectorization: stacks the columns of
	the matrix A into a long column vec-
	tor
$\mathbf{E}_d\left[\mathbf{A}\right]$	Extracts the diagonal elements of a
	square matrix and returns them in a
	column vector
$\overline{\mathbf{E}_{l}\left[\mathbf{A} ight]}$	Extracts the elements strictly below
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_{u}\left[\mathbf{A}\right]$	Extracts the elements strictly above
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_b\left[\mathbf{A} ight]$	Block vectorization operator: stacks
	square block matrices of the input
	into a long block column matrix
unvec (A)	Reshapes a column vector into a ma-
,	trix
$-\mathrm{tr}\{\mathbf{A}\}$	trace
$\frac{\mathbf{X}_{(n)}}{\mathbf{X}_{(n)}}$	<i>n</i> -mode matricization of the tensor \mathcal{X}
2 (n)	m mode mannerzanom or one ocusor a

5.5 Operations with vectors

$\ \mathbf{a}\ $	l_1 norm, 1-norm, or Manhatan norm
$\ \mathbf{a}\ , \ \mathbf{a}\ _2$	l_2 norm, 2-norm, or Euclidean norm
$\ \mathbf{a}\ _p$	l_p norm, p -norm, or Minkowski norm
$\ \mathbf{a}\ _{\infty}$	l_{∞} norm, ∞ -norm, or Chebyshev
	norm
diag (a)	Diagonalization: a square, diagonal matrix with entries given by the vec-
	tor a

5.6 Decompositions

Q	Eigenvectors matrix; Orthogonal ma-
•	trix of the QR decomposition[20]
R	Upper triangular matrix of the QR
	decomposition[20]
U	Left singular vectors[20]
$\overline{\mathbf{U}_r}$	Left singular nondegenerated vectors
$\frac{\mathrm{U}_r}{\Sigma}$	Singular value matrix
Σ_r	Singular value matrix with nonzero
	singular values in the main diagonal
Σ^+	Singular value matrix of the pseu-
	doinverse [20]
Σ_r^+	Singular value matrix of the pseu-
	doinverse with nonzero singular val-
	ues in the main diagonal
V	Right singular vectors [20]
$\overline{\mathrm{V}_r}$	Right singular nondegenerated vec-
	tors
$\operatorname{eig}\left(\mathbf{A} ight)$	Set of the eigenvalues of A [5, 13, 16]
$\overline{[\![\mathbf{A},\mathbf{B},\mathbf{C},\ldots]\!]}$	CANDECOMP/PARAFAC (CP) de-
	composition of the tensor \mathcal{X} from the
	outer product of column vectors of \mathbf{A} ,
	B, C,
$[\![\pmb{\lambda};\mathbf{A},\mathbf{B},\mathbf{C},\ldots]\!]$	Normalized CANDE-
	COMP/PARAFAC (CP) decom-
	position of the tensor \mathcal{X} from the
	outer product of column vectors of
	A, B, C, \dots

5.7 Spaces

$\mathrm{span}\left\{\mathbf{a}_1,\mathbf{a}_2,\ldots,\mathbf{a}_n\right\}$	Vector space spanned by the argu-
	ment vectors [8]
$C(\mathbf{A})$, columnspace(\mathbf{A}), range(\mathbf{A}),	Columnspace, range or image, i.e.,
$\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$	the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$, where
	\mathbf{a}_i is the ith column vector of the ma-
	trix A [14, 20]
$C(\mathbf{A}^{H})$	Row space (also called left
	columnspace) [14, 20]
$N(\mathbf{A})$, nullspace(\mathbf{A}), null(\mathbf{A}), kernel(\mathbf{A})	Nullspace (or kernel space) [14, 20,
	21]
$N(\mathbf{A}^{H})$	Left nullspace
rank A	Rank, that is, $\dim(\operatorname{span}\{A\}) =$
	$\dim\left(\mathrm{C}\left(\mathbf{A}\right)\right)[14]$

nullity (A)	Nullity of \mathbf{A} , i.e., dim $(N(\mathbf{A}))$
$\mathbf{a} \perp \mathbf{b}$	a is orthogonal to b
a ⊥ b	a is not orthogonal to b

5.8 Inequalities

$\mathcal{X} \le 0$	Nonnegative tensor
$\mathbf{a} \leq_K \mathbf{b}$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the conic subset K in
	the space $\mathbb{R}^n[3]$
$a <_K b$	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the interior of
	the conic subset K in the space $\mathbb{R}^n[3]$
$a \le b$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-
	thant conic subset, \mathbb{R}^n_+ , in the space
	\mathbb{R}^n .[3]
a < b	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-
	thant conic subset, \mathbb{R}^n_{++} , in the space
	$\mathbb{R}^n[3]$
$\mathbf{A} \leq_K \mathbf{B}$	Generalized inequality meaning that
	${\bf B}-{\bf A}$ belongs to the conic subset K
	in the space $\mathbb{S}^n[3]$
$\mathbf{A} \prec_K \mathbf{B}$	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the interior of
	the conic subset K in the space $\mathbb{S}^n[3]$
$\mathbf{A} \leq \mathbf{B}$	Generalized inequality meaning that
	$\mathbf{B} - \mathbf{A}$ belongs to the positive semidef-
	inite conic subset, \mathbb{S}_{+}^{n} , in the space
	$\mathbb{S}^n[3]$
A < B	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the positive or-
	thant conic subset, \mathbb{S}_{++}^n , in the space
	$\mathbb{S}^n[3]$

6 Communication systems

6.1 Symbols

В	One-sided bandwidth of the trans-
	mitted signal, in Hz

\overline{W}	One-sided bandwidth of the trans-
	mitted signal, in rad/s
x_i	Real or in-phase part of x
x_q	Imaginary or quadrature part of x
f_c, f_{RF}	Carrier frequency (in Hertz)
$\frac{f_L}{f_L}$	Carrier frequency in L-band (in
JL	Hertz)
f_{IF}	Intermediate frequency (in Hertz)
f_s	Sampling frequency or sampling rate
	(in Hertz)
T_s	Sampling time interval/duration/pe-
	riod
R	Bit rate
T	Bit interval/duration/period
T_c	Chip interval/duration/period
T_{sy}, T_{sym}	Symbol/signaling[17] interval/dura-
	tion/period
S_{RF}	Transmitted signal in RF
S_{FI}	Transmitted signal in FI
S, S_l	Lowpass (or baseband) equivalent
	signal or envelope complex of trans-
	mitted signal
r_{RF}	Received signal in RF
r_{FI}	Received signal in FI
r, r_l	Lowpass (or baseband) equivalent
	signal or envelope complex of re-
	ceived signal
$\overline{\phi}$	Signal phase
ϕ_0	Initial phase
η_{RF}, w_{RF}	Noise in RF
η_{FI}, w_{FI}	Noise in FI
η , w	Noise in baseband
τ	Timing delay
Δau	Timing error (delay - estimated)
arphi	Phase offset
$\Delta arphi$	Phase error (offset - estimated)
f_d	Linear Doppler frequency
Δf_d	Frequency error (Doppler frequency -
	estimated)
ν	Angular Doppler frequency
$\Delta \nu$	Frequency error (Doppler frequency -
	estimated)
γ, A	Transmitted signal amplitude

γ_0, A_0	Combined effect of the path loss and
	antenna gain

6.2 Fading multipath channels

$ \begin{array}{c} \tau \overset{\mathcal{F}}{\leftrightarrow} f & \text{Second support temporal of the signal } (c(t) \text{ varies with with the input at the time } \tau). \ f \text{ is obtained after taking the Fourier transform on } \tau. \\ c(t,\tau) & \text{Complex envelope of the channel response at the time } t \text{ due to an impulse applied at the } t-\tau \\ \hline C(f,t) & \text{Transfer function of } c(t,\tau) \text{ in } \tau \\ \alpha(t,\tau) & \text{Attenuation of } c(t,\tau), \text{ i.e., } c(t,\tau) = \\ \alpha(t,\tau)e^{e\pi f_c\tau} \\ \hline R_c(\tau_1,\tau_2,\Delta t) & \text{Autocorrelation function of } c(t,\tau), \text{ i.e., } R_c(\tau_1,\tau_2,\Delta t) = \\ E\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right] \\ R_c(\tau,\Delta t) & \text{Autocorrelation function of } c(t,\tau) \text{ assuming uncorrelated scattering} \\ R_c(\tau),R_c(\tau,\Delta t)\Big _{\Delta t=0} & \text{Multipath intensity profile or delay power spectrum} \\ R_C(\Delta f,\Delta t),R_C(f_1,f_2;\Delta t), & \text{Spaced-frequency, spaced-time correlation function } (\Delta f=f_2-f_1) \\ F_{\tau}\left\{R_c(\tau,\Delta t)\right\} \\ R_C(\Delta f),R_C(\Delta f,\Delta t)\Big _{\Delta t=0},F\left\{R_c(\tau)\right\} & \text{Spaced-frequency correlation function} \\ (\Delta f)_c & \text{Coherence bandwidth of } c(t), \text{ that is, the frequency interval in which } R_C(\Delta f) \text{ is nonzero} \\ T_m & \text{Multipath spread of the channel, that is, the time interval in which } R_c(\tau) \text{ is nonzero} \\ C_{C}(\Delta f),R_C(\Delta f,\Delta t)\Big _{\Delta f=0} & \text{Spaced-time correlation function} \\ S_C(\lambda),\mathcal{F}\left\{R_C(\Delta t)\right\} & \text{Doppler power spectrum} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) is no$	$t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda$	Support temporal of the signal. λ is obtained after taking the Fourier transform on t .
	$\tau \stackrel{\mathcal{F}}{\leftrightarrow} f$	nal $(c(t))$ varies with with the input at the time τ). f is obtained after
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	c(t, au)	sponse at the time t due to an impulse

	is, the frequency interval in which
	$S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$
$S_C(\tau,\lambda), \mathcal{F}_{\Delta f,\Delta t} \left\{ R_C(\Delta f,\Delta t) \right\}$	Scattering function

7 Discrete mathematics

7.1 Set theory

A + B	Set addition (Minkowski sum), i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
	[12]
A - B	Minkowski difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
$A\ominus B$	Pontryagin difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} $ [12]
$A \setminus B, A - B$	Set difference or set subtraction, i.e.,
	$A \setminus B = \{x x \in A \land x \notin B\}$ the set con-
	taining the elements of A that are not
	in B [18]
$A \cup B$	Set of union
$A \cap B$	Set of intersection
$A \times B$	Cartesian product
A^n	$A \times A \times \cdots \times A$
	n times
A^{\perp}	Orthogonal complement of A , e.g.,
	$N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [3]$
$A \oplus B$	Direct sum, i.e., each $\mathbf{v} \in$
	$\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a
	unique representation of $\sum \mathbf{a}_i$ with
	$\mathbf{a}_i \in S_i$. That is, they expand to a
	space. Note that $\{S_i\}$ might not be
	orthogonal each other [8]
$A \overset{\perp}{\oplus} B$	Direct sum of two space that are or-
	thogonal and span a <i>n</i> -dimensional
	space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
	\mathbb{R}^n (this decomposition of \mathbb{R}^n is
	called the orthogonal decomposition
	induced by A) [3]
\bar{A}, A^c	Complement set (given U)
#A, A	Cardinality
$a \in A$	a is element of A

$a \notin A$	a is not element of A
$\{1,2,\ldots,n\}$	Discrete set containing the integer el-
	ements $1, 2, \ldots, n$
U	Universe
2^A	Power set of A
\mathbb{R}	Set of real numbers
\mathbb{C}	Set of complex numbers
\mathbb{Z}	Set of integer number
$\mathbb{B} = \{0, 1\}$	Boolean set
Ø	Empty set
N	Set of natural numbers
$\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$	Real or complex space (field)
$\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$	$I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or
	complex) space
K+	Nonnegative real (or complex) space
	[3]
K++	Positive real (or complex) space, i.e.,
	$\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [3]$
$\mathbb{S}^n, \mathcal{S}^n$	Conic set of the symmetric matrices
	in $\mathbb{R}^{n \times n}$ [3]
$\mathbb{S}^n_+, \mathcal{S}^n_+$	Conic set of the symmetric positive
	semidefinite matrices in $\mathbb{R}^{n \times n}$ [3]
$\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$	Conic set of the symmetric positive
	definite matrices in $\mathbb{R}^{n \times n}$, i.e., $\mathbb{S}^n_{++} =$
	$\mathbb{S}^n_+ \setminus \{0\}$ [3]
\mathbb{H}^n	Set of all hermitian matrices in $\mathbb{C}^{n\times n}$
[a,b]	Closed interval of a real set from a to
	b
(a,b)	Opened interval of a real set from a
	to b
[a,b),(a,b]	Half-opened intervals of a real set
	from a to b

7.2 Quantifiers, inferences

\forall	For all (universal quantifier) [9]
3	There exists (existential quantifier)
	[9]
<u></u> ∄ ∃!	There does not exist [9]
∃!	There exist an unique [9]
€	Belongs to [9]
∉	Does not belong to [9]
:	Because [9]

<u> ,:</u>	Such that, sometimes that paranthe-
	ses is used [9]
$\overline{}$,,(\cdot)	Used to separate the quantifier with
	restricted domain from the its scope,
	e.g., $\forall x < 0 (x^2 > 0)$ or $\forall x < 0$
	$0, x^2 > 0$ [9]
·:	Therefore [9]

7.3 Propositional Logic

$\neg a$	Logical negation of a [18]
$a \wedge b$	Conjunction (logical AND) operator
	between a and $b[18]$
$a \lor b$	Disjunction (logical OR) operator be-
	tween a and $b[18]$
$a \oplus b$	Exclusive OR (logical XOR) operator
	between a and $b[18]$
$a \rightarrow b$	Implication (or conditional) state-
	ment[18]
$a \leftrightarrow b$	Bi-implication (or biconditional)
	statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$
	[18]
$a \equiv b, a \iff b, a \Leftrightarrow b$	Logical equivalence, i.e., $a \leftrightarrow b$ is a
	tautology[18]

7.4 Operations

a	Absolute value of a
log	Base-10 logarithm or decimal loga-
	rithm
ln	Natual logarithm
$\operatorname{Re}\left\{ x\right\}$	Real part of x
$\operatorname{Im}\left\{ x\right\}$	Imaginary part of x
۷٠	Phase (complex argument)
$x \mod y$	Remainder, i.e., $x - y \lfloor x/y \rfloor$, for $y \neq 0$
x div y	Quotient [18]
$x \equiv y \pmod{m}$	Congruent, i.e., $m \setminus (x - y)$ [18]
$\operatorname{frac}(x)$	Fractional part, i.e., $x \mod 1$ [9]
$a \setminus b, a \mid b$	b is a positive integer multiple of a ,
	i.e., $\exists n \in \mathbb{Z}_{++} \mid b = na \ [9, 18]$
$a \ \ b, a \ \ b$	b is not a positive integer multiple of
	$a, \text{ i.e., } \not\equiv n \in \mathbb{Z}_{++} \mid b = na \ [9, 18]$

[·]	Ceiling operation [9]
[.]	Floor operation [9]

8 Electromagnetic waves

Φ	Electric flux (scalar) (in V m)
J	Electric current density vector (in
	A/m^2)
Н	Magnetic field vector (in A/m)
В	Magnetic flux density vector (in
	$Wb/m^2 = T$
\overline{q}	Electric charge strength/magnitude
	(in C)
ho	Electric charge density (for volumes)
	$(in C/m^3)$
$ ho_s$	Electric charge density (for surface)
	$(in C/m^2)$
$ ho_l$	Electric charge density (for volumes)
	(in C/m)
f	Electrostatic force (Coulomb force),
	(in kg m/s^2)
${m \mathcal E}$	Electric permittivity(in F/m)
	[ramoFields Waves Communication 1994]
$\overline{\varepsilon_r}$	Relative electric permittivity
$arepsilon_r$	Relative electric permittivity or dielectric constant (in F/m)
$arepsilon_r$	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994]
$arepsilon_r$ $arepsilon_0$	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vac-
	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \mathrm{F/m}$
$arepsilon_0$	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, 8.854 × 10 ⁻¹² F/m [ramoFieldsWavesCommunication1994]
$oldsymbol{arepsilon}$ E	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, 8.854 × 10 ⁻¹² F/m [ramoFieldsWavesCommunication1994] Electric field vector (in V/m)
$arepsilon_0$	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, 8.854 × 10 ⁻¹² F/m [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric dis-
$oldsymbol{arepsilon}$ E	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, 8.854 × 10 ⁻¹² F/m [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vec-
ε ₀ E D	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m ²)
$oldsymbol{arepsilon}$ E	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m²) Electric polarization of the material
ε ₀ Ε D	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m²) Electric polarization of the material (in C/m²)
ε ₀ Ε D	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m²) Electric polarization of the material (in C/m²) Electric susceptibility (for linear and
ε ₀ Ε D	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m²) Electric polarization of the material (in C/m²) Electric susceptibility (for linear and isotropic materiais)
ε ₀ Ε D	Relative electric permittivity or dielectric constant (in F/m) [ramoFieldsWavesCommunication1994] Electric permittivity in vacuum, $8.854 \times 10^{-12} \text{F/m}$ [ramoFieldsWavesCommunication1994] Electric field vector (in V/m) Electric flux density, electric displacement, or electric induction vector (in C/m²) Electric polarization of the material (in C/m²) Electric susceptibility (for linear and

9 Calculus

abla	Vector differential operator (Nabla symbol), i.e., ∇f is the gradient of the scalar-valued function f , i.e., f : $\mathbb{R}^n \to \mathbb{R}$
t,(u,v)	Parametric variables commonly used, t for one variable, (u, v) for two variables[19]
$\mathbf{r}(t)$	Vector position $(x(t), y(t), z(t))$ parametrized by $t[19]$
$\mathbf{r}'(t)$	First derivative of $\mathbf{r}(t)$, i.e., the tangent vector of the curve $(x(t), y(t), z(t))$ [19]
$\mathbf{T}(t), \mathbf{u}(t)$	Tangent unit vector of $\mathbf{r}(t)$, i.e.,
$\mathbf{n}(t), \left(\frac{y'(t)}{ \mathbf{r}'(t) }, -\frac{x'(t)}{ \mathbf{r}'(t) }\right)$	Normal vector of $\mathbf{r}(t)$, i.e., $\mathbf{n}(t) \perp \mathbf{T}(t)[19]$
C	Contour that traveled by $\mathbf{r}(t)$, for $a \le t \le b$ [19]
L, L(C)	Total length of the contour C (which can be defined the vector \mathbf{r} , parametrized by t), i.e., $L_C =$
2(4)	$\int_{a}^{b} \mathbf{r}'(t) dt[19]$
s(t)	Length of the arc, which can be defined by the vector \mathbf{r} and t , that is, $s(t) = \int_{a}^{t} \mathbf{r}'(u) du \ (s(b) = L)[19]$
ds	$s(t) = \int_{a}^{t} \mathbf{r}'(u) du \ (s(b) = L)[19]$ Differential operator of the length of the contour C , i.e., $ds = \mathbf{r}'(t) dt$
$\int_C f(\mathbf{r}) \mathrm{d}s , \int_a^b f(\mathbf{r}(t)) \mathbf{r}'(t) \mathrm{d}t$	Line integral of the function $f: \mathbb{R}^n \to \mathbb{R}$ along the contour $C[1, 19]$
$\int_C \mathbf{F} \cdot d\mathbf{r} , \int_a^b \mathbf{F}(\mathbf{r}(t)) \cdot \mathbf{r}'(t) dt , \int_C \mathbf{F} \cdot \mathbf{T} ds$	Line integral of vector field \mathbf{F} along the contour C [1, 19]
$\int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F}, \int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{r}$	Alternative notation to the line integral, where the parametric variable t goes from a to b , making r goes from $\mathbf{r}(a) = \mathbf{a}$ to $\mathbf{r}(b) = \mathbf{b}$ [1]
\oint_C, \oint_C	Closed line integral along the contour C
$\mathbf{r}(u,v)$	Vector position $(x(u, v), y(u, v), z(u, v))$ parametrized by (u, v)
\mathbf{r}_u	$(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)$
\mathbf{r}_{v}	$(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$

	Diff. at 1
$\mathrm{d}A$	Differential operator of a 2D area
	(denoted by D or R) in the \mathbb{R}^2 do-
	main. This differential operator can
	be solved in different ways (rectangu-
	lar, polar, cylindric, etc) [19]
D,R	Integration domain in which dA is in-
	tegrated, i.e., $\iint_D f dA$ [19]
S	Smooth surface S, i.e., a 2D area in a
~	3D space (\mathbb{R}^3 domain)
$dS, \mathbf{r}_u \times \mathbf{r}_v dA$	Differential operator of a 2D area in
ab , $[u \times v]$ ar	a 3D domain (an surface). Note that
	$dS = \mathbf{r}_u \times \mathbf{r}_v dA$ should be accompa-
	nied with the change of the integra-
	$\frac{\text{tion interval(from } S \text{ to } D)}{\sum_{i=1}^{N} \frac{1}{N}}$
$A(S), \iint_S dS, \iint_D \mathbf{r}_u \times \mathbf{r}_v dA$	Area of the surface S parametrized by
	(u, v), in which dA is the area defined
	in the D domain (which is form by
	the u -by- v graph)
$\mathrm{d}V$	Differential operator of a shape vol-
	ume (denoted by E) in \mathbb{R}^3 domain,
	i.e., $\iiint_E dV = V$
E	Integration domain in which dV is in-
	tegrated, i.e., $\iiint_E f dV$ [19]
$V, \iint_D f \mathrm{d}A, \iiint_E f \mathrm{d}V$	Volume of the function f over the re-
30 D · 300 E ·	gions D (in the case of double inte-
	grais) or E (in the case of triple inte-
	grais)
$\iint_{\mathcal{S}} f dS$, $\iint_{\mathcal{D}} f \mathbf{r}_{\mu} \times \mathbf{r}_{\nu} dA$	Surface integral over S
$\frac{\iint_{S} f dS, \iint_{D} f \mathbf{r}_{u} \times \mathbf{r}_{v} dA}{\mathbf{n}(u, v), \frac{\mathbf{r}_{u}(u, v) \times \mathbf{r}_{v}(u, v)}{ \mathbf{r}_{u}(u, v) \times \mathbf{r}_{v}(u, v) }}$	Normal vector of of the smooth sur-
$ \mathbf{r}_{u}(u,v)\times\mathbf{r}_{v}(u,v) $	face S
$\iint_{S} \mathbf{F} \cdot \mathbf{n} \mathrm{d}S$, $\iint_{S} \mathbf{F} \cdot \mathrm{d}\mathbf{S}$,	Flux integral of vector field F through
$\frac{\iint_D \mathbf{F} \cdot (\mathbf{r}_u \times \mathbf{r}_v) \mathrm{d}A}{\nabla \times \mathbf{F}, \text{curl } \mathbf{F}}$	the smooth surface S ($\mathbf{n} \mathrm{d} S \triangleq \mathrm{d} \mathbf{S}$)
$\nabla \cdot \mathbf{F}$, div \mathbf{F}	Curl (rotacional) of the vector field F Divercence of the vector field F
$\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,$	Scalar Laplacian operator (per-
$\frac{\partial^2 f}{\partial x^2} + \frac{\partial^2 f}{\partial y^2} + \frac{\partial^2 f}{\partial z^2}$	formed on a scalar-valued function
	$f: \mathbb{R}^n \to \mathbb{R})$
$\nabla^{2}\mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla(\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$	Vector Laplacian operator (per-
$(\partial^2 \mathbf{F}/\partial x^2, \partial^2 \mathbf{F}/\partial y^2, \partial^2 \mathbf{F}/\partial z^2)$	formed on a vector field, i.e., a vector-
	valued function, $\mathbf{F} : \mathbb{R}^n \to \mathbb{R}^n$).
	∇^2 denotes the scalar (vector) Lapla-
	cian if the function is scalar-valued
	(vector-valued)

10 Generic mathematical symbols

	Q.E.D.
<u>*</u>	Equal by definition
:=, ←	Assignment [18]
≠	Not equal
∞	Infinity
j	$\sqrt{-1}$

11 Generic mathematical functions

$\mathcal{O}(\cdot), O(\cdot)$	Big-O notation
$\Gamma(\cdot)$	Gamma function
$Q(\cdot)$	Quantization function
$I_{\alpha}(\cdot)$	Modified Bessel function of the first
	kind and order α

12 Abbreviations

wrt.	With respect to
st.	Subject to
iff.	If and only if
EVD	Eigenvalue decomposition, or eigen-
	decomposition [14]
SVD	Singular value decomposition
CP	CANDECOMP/PARAFAC
