1 Font notation

$a, b, c, \ldots, A, B, C, \ldots$	Scalars
a, b, c, \dots	Vectors
$\overline{\mathbf{A}, \mathbf{B}, \mathbf{C}, \dots}$	Matrices
$\mathcal{A}, \mathcal{B}, \mathcal{C}, \dots$	Tensors
ABC ABC ABC	Sets

2 Signals and functions

2.1 Time indexing

x(t)	Continuous-time t
$x[n],x[k],x[m],x[i],\ldots$	Discrete-time n, k, m, i, \ldots (parenthe-
$x_n, x_k, x_m, x_i, \dots$	sis should be adopted only if there
$x(n), x(k), x(m), x(i), \dots$	are no continuous-time signals in the
	context to avoid ambiguity)
$x[((n-m))_N][26], x((n-m))_N[20]$	Circular shift in m samples within a
	N-samples window

2.2 Common signals

$\delta(t)$	Delta function
$\delta[n], \delta_{i,j}$	Kronecker function $(n = i - j)$
h(t), h[n]	Impulse response (continuous and
	discrete time)
$\tilde{x}[n], \tilde{x}(t)$	Periodic discrete- or continuous-time
	signal
$\hat{x}[n], \hat{x}(t)$	Estimate of $x[n]$ or $x(t)$
$\dot{x}[m]$	Interpolation of $x[n]$

2.3 Common functions

$\mathcal{O}(\cdot), O(\cdot)$	Big-O notation
$\Gamma(\cdot)$	Gamma function
$Q(\cdot)$	Quantization function
$\operatorname{sgn}(\cdot)$	Signum function
$\tanh(\cdot)$	Hyperbolic tangent function
$I_{\alpha}(\cdot)$	Modified Bessel function of the first
	kind and order α

	n	Binomial coefficient
- (k	Dinomai coemcient

2.4 Operations and symbols

$f:A\to B$	A function f whose domain is A and codomain is B
$\mathbf{f}:A o\mathbb{R}^n$	A vector-valued function \mathbf{f} , i.e., $n \ge 2$
$\frac{f^n, x^n(t), x^n[k]}{f^n, x^n(t), x^n[k]}$	n th power of the function f, x[n] or x(t)
$f^{(n)}, x^{(n)}(t)$	nth derivative of the function f or $x(t)$
$f', f^{(1)}, x'(t)$	1th derivative of the function f or $x(t)$
$f^{\prime\prime}, f^{(2)}, x^{\prime\prime}(t)$	2th derivative of the function f or $x(t)$
$\underset{x \in \mathcal{A}}{\arg\max} \ f(x)$	Value of x that minimizes x
arg min f(x)	Value of x that minimizes x
$f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$	Infimum, i.e., $f(\mathbf{x}) = \min \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\},$ which is the greatest lower bound of this set [6]
$f(\mathbf{x}) = \sup_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$	Supremum, i.e., $f(\mathbf{x}) = \max \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\}$, which is the least upper bound of this set [6]
$f \circ g$	Composition of the functions f and g
*	Convolution (discrete or continuous)
	Circular convolution

2.5 Digital signal processing

W_N	Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [20]
N	Number of samples in the DFT/FFT
Ω [20]	Continuous angular frequency (in rad/s)

ω	Discrete angular frequency. As ω is
	also used to denote continuous angu-
	lar frequency outside the DSP con-
	text, it is always convenient to state
	that it denotes the discrete frequency
	when it does
f_c	Continuous linear frequency (in Hz)
f	Discrete linear frequency. As f is also
	used to denote continuous linear fre-
	quency outside the DSP context, it
	is always convenient to state that it
	denotes the discrete frequency when
	it does
$\mathcal{R}_N[n]$	Rectangular window used to cut off
	the discrete sequences [20]
$T[26], T_s$	Sampling period
f_s Ω_s	Sampling frequency (in Hz), i.e., $1/T$
Ω_s	Sampling frequency (in rad/s), i.e.,
	$2\pi f_s$
Ω_N [26], B	One-sided effective bandwidth of the
	continuous-time signal spectrum
ω_s	Stop frequency [20]
ω_p	Pass frequency [20]
$\Delta \omega$	$\omega_s - \omega_p$ [20]
ω_c	Cutoff frequency [20]
s(t)	Impulse train
$x_c(t)$ [26], $x(t)$	Continuous-time signal
$x_s(t)$	Sampled version of $x(t)$, i.e., $x(t)s(t)$
$x_r(t)$	Reconstruction of $x(t)$ from interpo-
	lation
$\tilde{x}[n]$	Periodic extension of the aperi-
	odic signal $x[n]$

2.6 Transformations

$\mathcal{F}\left\{ \cdot ight\}$	Fourier transform (FT)
$\overline{\mathrm{DTFT}\left\{\cdot\right\},\mathrm{DFS}\left\{\cdot\right\},\mathrm{FFT}\left\{\cdot\right\}}$	Discrete-time Fourier Transform
	(DTFT), Discrete Fourier Trans-
	form (DFT), Discrete Fourier Series
	(DFS), respectively
$\mathcal{L}\left\{ \cdot \right\}$	Laplace transform
$\mathcal{Z}\left\{\cdot\right\}$	z-transform
$\hat{x}(t), \hat{x}[n]$	Hilbert transform of $x(t)$ or $x[n]$

T7 ()	T 1 (C ()
X(s)	Laplace transform of $x(t)$
X(f)	Fourier transform (FT) (in linear fre-
	quency, Hz) of $x(t)$
$X(j\omega)$	Fourier transform (FT) (in angular
	frequency, rad/sec) of $x(t)$
$X(e^{j\omega})$	Discrete-time Fourier transform
	(DTFT) of $x[n]$
$X[k], X(k), X_k$	Discrete Fourier transform (DFT) or
	fast Fourier transform (FFT) of $x[n]$,
	or even the Fourier series (FS) of the
	periodic signal $x(t)$
$\widetilde{X}[k], \widetilde{X}(k), \widetilde{X}_k$	Discrete Fourier series (DFS) of $\tilde{x}[n]$
X(z)	z-transform of $x[n]$

3 Probability, statistics, and stochastic processes

3.1 Operators and symbols

$\mathrm{E}\left[\cdot\right],\mathbf{E}\left[\cdot\right]\left[25\right],E\left[\cdot ight],\mathbb{E}\left[\cdot ight]$	Statistical expectation operator [11]
$E_u [\cdot], \mathbf{E}_u [\cdot] [25], E_u [\cdot], \mathbb{E}_u [\cdot]$	Statistical expectation operator with
	respect to u
$\overline{\langle \cdot \rangle}$	Ensemble average
$var[\cdot], VAR[\cdot]$	Variance operator [5, 19, 24, 28]
$\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$	Variance operator with respect to u
$cov[\cdot], COV[\cdot]$	Covariance operator [5]
$\operatorname{cov}_{u}[\cdot], \operatorname{COV}_{u}[\cdot]$	Covariance operator with respect to
	и
μ_x	Mean of the random variable x
μ_{x}, m_{x}	Mean vector of the random variable
	x [7]
μ_n	nth-order moment of a random vari-
	able
$\frac{\sigma_x^2, \kappa_2}{\mathcal{K}_x, \mu_4}$	Variance of the random variable x
\mathcal{K}_x, μ_4	Kurtosis (4th-order moment) of the
	random variable x
κ_n	nth-order cumulant of a random vari-
	able
$\rho_{x,y}$	Pearson correlation coefficient be-
	tween x and y
$a \sim P$	Random variable a with distribution
	P
\mathcal{R}	Rayleigh's quotient

3.2 Stochastic processes

$r_X(au), R_X(au)$	Autocorrelation function of the signal
	x(t) or $x[n]$ [25]
$S_X(f), S_X(j\omega)$	Power spectral density (PSD) of $x(t)$
	in linear (f) or angular (ω) frequency
$S_{x,y}(f), S_{x,y}(j\omega)$	Cross PSD of $x(t)$ and $y(t)$ in linear
	or angular (ω) frequency
R_x	(Auto)correlation matrix of $\mathbf{x}(n)$
$r_{x,d}(\tau), R_{x,d}(\tau)$	Cross-correlation between $x[n]$ and
	d[n] or $x(t)$ and $d(t)$ [25]
R_{xy}	Cross-correlation matrix of $\mathbf{x}(n)$ and
	$\mathbf{y}(n)$
$\mathbf{p}_{\mathbf{x}d}$	Cross-correlation vector
	between $\mathbf{x}(n)$ and $d(n)$
	between $\mathbf{x}(n)$ and $d(n)$ [dinizAdaptiveFiltering1997]
$c_x(\tau), C_x(\tau)$	
$c_x(\tau), C_x(\tau)$	[dinizAdaptiveFiltering1997]
$c_{x}(\tau), C_{x}(\tau)$ $C_{x}, K_{x}, \Sigma_{x}, \text{cov} [x]$	[dinizAdaptiveFiltering1997] Autocovariance function of the signal
	[dinizAdaptiveFiltering1997] Autocovariance function of the signal $x(t)$ or $x[n]$ [25]
	[dinizAdaptiveFiltering1997] Autocovariance function of the signal $x(t)$ or $x[n]$ [25] (Auto)covariance matrix of \mathbf{x} [5, 19,
$\mathbf{C}_{\mathbf{x}}, \mathbf{K}_{\mathbf{x}}, \mathbf{\Sigma}_{\mathbf{x}}, \operatorname{cov}\left[\mathbf{x}\right]$	[dinizAdaptiveFiltering1997] Autocovariance function of the signal $x(t)$ or $x[n]$ [25] (Auto)covariance matrix of \mathbf{x} [5, 19, 24, 28, 35]

3.3 Functions

$Q(\cdot)$	Q-function, i.e., $P[\mathcal{N}(0,1) > x]$ [28]
$\operatorname{erf}(\cdot)$	Error function [28]
$\operatorname{erfc}(\cdot)$	Complementary error function i.e.,
	$\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x) [28]$
P[A]	Probability of the event or set A [24]
$p(\cdot), f(\cdot)$	Probability density function (PDF)
	or probability mass function (PMF)
	[24]
$\frac{p(x \mid A)}{F(\cdot)}$	Conditional PDF or PMF [24]
$F(\cdot)$	Cumulative distribution function
	(CDF)
$\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$	First characteristic function (CF) of
	x [28, 34]
$M_X(t), \Phi_X(-jt), E[e^{tX}]$	Moment-generating function (MGF)
	of $x [28, 34]$
$\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$	Second characteristic function
$K_X(t), \ln E\left[e^{tX}\right], \ln M_X(t)$	Cumulant-generating function
	(CGF) of x [19]

3.4 Distributions

$\mathcal{N}(\mu, \sigma^2)$	Gaussian distribution of a random variable with mean μ and variance σ^2
$\mathcal{CN}(\mu, \sigma^2)$	Complex Gaussian distribution of a random variable with mean μ and variance σ^2
$\mathcal{N}(\pmb{\mu},\pmb{\Sigma})$	Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ
$\mathcal{CN}(oldsymbol{\mu}, oldsymbol{\Sigma})$	Complex Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ
$\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$	Uniform distribution from a to b
$\chi^2(n), \chi_n^2$	Chi-square distribution with n degree of freedom (assuming that the Gaussians are $\mathcal{N}(0,1)$)
$\operatorname{Exp}(\lambda)$	Exponential distribution with rate parameter λ
$\Gamma(\alpha, \beta)$	Gamma distribution with shape parameter α and rate parameter β
$\Gamma(\alpha, \theta)$	Gamma distribution with shape parameter α and scale parameter $\theta = 1/\beta$
$\operatorname{Nakagami}(m,\Omega)$	Nakagami-m distribution with shape parameter or fading figure m and spread, scale, or shape parameter Ω
$\operatorname{Rayleigh}(\sigma)$	Rayleigh distribution with scale parameter σ
$\operatorname{Rayleigh}(\Omega)$	Rayleigh distribution with the second moment $\Omega = E[x^2] = 2\sigma^2$
$\mathrm{Rice}(s,\sigma)$	Rice distribution with noncentrality parameter s and σ . s^2 represent the specular component power
$\overline{\mathrm{Rice}(A,K)}$	Rice distribution with Rice factor $K = s^2/2\sigma^2$ and scale parameter $A = s^2 + 2\sigma^2$

4 Machine learning, optimization theory, and statistical signal processing

4.1 Matrix Calculus

$\mathbf{g}, \nabla f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector, "used" in the steepest (or gradient) descent method
$\mathbf{g}_{\mathbf{x}}, \nabla_{\mathbf{w}} f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector with respect w [5]
$ \frac{\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}}{\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f [18]} $	Jacobian matrix.
$\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f$ [18]	Hessian matrix. The notation ∇^2 is sometimes used in Matrix Calculus to denote the second-order vector derivative. However, it must be avoided since, in Vector Calculus, ∇^2 also denotes the Laplacian operator which in turn may be scalar or vector Laplacian operator depending on whether f is scalar- or vector-valued, respectively. Some discussion about can be found in [1–3]

4.2 Estimated terms

\mathbf{g} (or $\hat{\mathbf{g}}$ if the gradient vector is \mathbf{g})	Stochastic gradient descent (SGD),
	i.e., instantaneous approximation of
	gradient descent vector
$\hat{x}(t) \text{ or } \hat{x}[n]$	Estimate of $x(t)$ or $x[n]$
$\hat{\boldsymbol{\mu}}_{\chi}, \hat{\mathbf{m}}_{\chi}$	Sample mean of $x[n]$ or $x(t)$
$\frac{\hat{\boldsymbol{\mu}}_{\mathbf{x}}, \hat{\mathbf{m}}_{\mathbf{x}}}{\hat{r}_{x}(\tau), \hat{R}_{x}(\tau)}$	Sample mean vector of $\mathbf{x}[n]$ or $\mathbf{x}(t)$
$\hat{r}_{\scriptscriptstyle X}(au),\hat{R}_{\scriptscriptstyle X}(au)$	Estimated autocorrelation function
	of the signal $x(t)$ or $x[n]$ [25]
$\hat{S}_x(f), \hat{S}_x(j\omega)$	Estimated power spectral density
	(PSD) of $x(t)$ in linear (f) or angular
	(ω) frequency
$\hat{\mathbf{R}}_{\mathbf{x}}$	Sample (auto)correlation matrix
$\hat{r}_{x,d}(\tau), \hat{R}_{x,d}(\tau)$	Estimated cross-correlation between
	x[n] and $d[n]$ or $x(t)$ and $d(t)$
$\hat{S}_{x,y}(f), \hat{S}_{x,y}(j\omega)$	Estimated cross PSD of $x(t)$ and $y(t)$
	in linear or angular (ω) frequency
$\hat{\mathbf{R}}_{\mathbf{x}\mathbf{y}}$	Sample cross-correlation matrix of
·	$\mathbf{R}_{\mathbf{x}\mathbf{y}}$
$\hat{c}_{x}(au), \hat{C}_{x}(au)$	Estimated autocovariance function of
	the signal $x(t)$ or $x[n]$
$\hat{ ext{C}}_{ ext{x}},\hat{ ext{K}}_{ ext{x}},\hat{ ext{\Sigma}}_{ ext{x}}$	Sample (auto)covariance matrix
$\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)$	Estimated cross-covariance function
	of the signal $x(t)$ or $x[n]$

$\hat{ ext{C}}_{ ext{xy}}, \hat{ ext{K}}_{ ext{xy}}, \hat{ extsup}$	Sample cross-covariance matrix
$\hat{\mathbf{H}}$	Estimate of the Hessian matrix

4.3 Signals, (hyper)parameters, system performance, and criteria

N	Number of instances (or samples),
	i.e., $n \in \{1, 2,, N\}$
$N_{ m trn}$	Number of instances in the training
	set, i.e., $n \in \{1, 2,, N_{\text{trn}}\}$
$N_{ m tst}$	Number of instances in the test set,
	i.e., $n \in \{1, 2, \dots, N_{\text{tst}}\}$
$N_{ m val}$	Number of instances in the validation
	set, i.e., $n \in \{1, 2,, N_{\text{val}}\}$
$ \begin{array}{c} N_e \\ N_a \\ K [5] \end{array} $	Number of epochs
$\overline{N_a}$	Number os attributes
K [5]	Number of classes (which is the num-
	ber of outputs in multiclass prob-
	lems). Use k to iterate over it
L	Number of layers. Use l to iterate
	over it
m_l [5], M_l , J [5]	Number of neurons at the l th layer.
	You might prefer J in the case of the
	single-layer perceptron (use j to it-
	erate over it). If you want to iter-
	ate through it, a sensible variation
	of Haykin notation is M_l , where m_l
	can be used as an iterator. m_0 is the
	length of the input vector without the
	bias.
$\mathbf{x}(n), \mathbf{x}_n$	Input signal (in \mathbb{R}^{N_a+1})
$x_0(n)$	Dummy input of the bais, which is
	usually ± 1 . $+1$ is preferred [5, 18].
$\frac{\varphi(\cdot)[18], h(\cdot)[5]}{\varphi'(v_{m_l}^{(l)}(n))[18], \frac{\partial y_{m_l}^{(l)}(n)}{\partial v_{m_l}^{(n)}(n)}} [18]$	Activation function
$(\alpha'(v^{(l)}(n))[18] = \frac{\partial y_{m_l}^{(l)}(n)}{\partial y_{m_l}^{(l)}}[18]$	Partial derivative of the activation
φ $(v_{m_l}(n))[10], \partial v_{m_l}^{(l)}(n)$	function with respect to $v_{m_l}^{(l)}(n)$ (m_l)
	neuron at l th layer)
$u^{(l)}(z) = \left(u^{(l)}(z)\right)$	* /
$y_{m_l}^{(l)}(n), \varphi\left(v_{m_l}^{(l)}(n)\right)$	Output signal of the m_l th neuron at
(I)(x)	the lth layer
$\frac{\mathbf{y}^{(l)}(n)}{\mathbf{y}(n),\mathbf{y}^{(L)}(n)}$	Output signal of the <i>l</i> th layer
$\mathbf{y}(n), \mathbf{y}^{(L)}(n)$	Output of the neural network

$\mathbf{d}(n), \mathbf{d}_{n}$ Desired label (in case of super learning). For multiclass cla cation, one-hot encoding is us used. For binary (scalar) cla cation, however antipodal enco i.e., $\{-1,1\}$ is more recomme [18]. $e_{m_{l}}(n)$ Error signal of the neuron m_{l} a l th layer	ually ussifi- ding, nded
cation, one-hot encoding is us used. For binary (scalar) cla cation, however antipodal enco i.e., $\{-1,1\}$ is more recomme [18]. $e_{m_l}(n)$ Error signal of the neuron m_l a l th layer	ually assifi- ding, nded
used. For binary (scalar) classifier cation, however antipodal encomposition i.e., $\{-1,1\}$ is more recommes [18]. $e_{m_l}(n)$ Error signal of the neuron m_l and l th layer	ding,
$\begin{array}{c} \text{cation, however antipodal enco} \\ \text{i.e., } \{-1,1\} \text{ is more recomme} \\ [18]. \\ e_{m_l}(n) \\ \text{Error signal of the neuron } m_l \text{ a} \\ l\text{th layer} \end{array}$	ding, nded
i.e., $\{-1,1\}$ is more recomme [18]. $e_{m_l}(n)$ Error signal of the neuron m_l a l th layer	nded
lth layer	t tha
·	t the
$\mathbf{r}(\mathbf{r}) = \mathbf{r}(\mathbf{r})$ Ermon signal	
$\mathbf{e}(n), \mathbf{d}(n) - \mathbf{y}(n)$ Error signal	
$\mathbf{w}_{m_l}^{(l)}(n), \mathbf{\theta}_{m_l}^{(l)}(n)$ Parameters, coefficients, or we	ights
$\begin{bmatrix} w^{(l)}_{m_l,0}(n) & w^{(l)}_{m_l,1}(n) & \dots & w^{(l)}_{m_l,m_{l-1}}(n) \end{bmatrix}$ vector in the <i>l</i> th layer. In the	case
$[m_{l,0}, m_{l,1}, $	ıdap-
tive filters, the superscript is om	itted
$w_{m_l,0}^{(l)}(n), b_{m_l}^{(l)}(n)$ Bias (the first term of the weight	vec-
tor) of the l th layer	
$\mathbf{W}(n), \begin{bmatrix} \mathbf{w}(1) & \mathbf{w}(2) & \cdots & \mathbf{w}(N) \end{bmatrix}^{\top}$ Matrix of the weights	
$\widetilde{\mathbf{W}}(n)$ Matrix of the weights, but with	hout
the bias	
$v_{m_l}^{(l)}(n), \mathbf{w}_{m_l}^{(l)\top}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$ Induced local field or activation	1 po-
tential. At the first layer $\mathbf{y}_{m_0}^{(0)}$	
$\mathbf{x}(n)$ [5])
$\mathbf{v}^{(l)}(n), \mathbf{W}^{(l)}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$ Vector of the local fields at the	 e <i>I</i> th
	0 1011
$\mathbf{w}^{\star}, \mathbf{w}_{o}, \mathbf{\theta}^{\star}, \mathbf{\theta}_{o}$ Optimum value of the parame	eters,
coefficients, or weights vector (
also used [5] but it is not re	
mended as it may be confused	
the conjugation operator)	
$\delta_{m_l}^{(l)}(n), \frac{\partial \mathscr{E}(n)}{\partial v_{m_l}^{(l)}(n)}$ Local gradient of the m_l th neurons the l th lever	$\frac{1}{1}$ on of
$\partial v_{m_l}^{(r)}(n)$ the <i>l</i> th layer.	
$\boldsymbol{\delta}^{(l)}(n)$ Vector of the local gradients of	of all
neurons at the l th layer	
$\mathbf{X}, \begin{bmatrix} \mathbf{x}(1) & \mathbf{x}(2) & \cdots & \mathbf{x}(N) \end{bmatrix}$ Data matrix	
$\eta(n)$ Learning rate hyperparameter [5
\mathscr{R} Bayes risk or average risk [5]	
c_{ij}, C_{ij} Misclassification cost in deciding	ng in
favor of class \mathscr{C}_i (represented in	
subspace \mathcal{H}_i) when the \mathcal{C}_j is the	true
1 1/	
class (used in Bayes classifiers/d	etec-
	etec-

${\mathcal T}$	Training set, i.e., the set $\{\mathbf{x}(n), d(n)\}$
	that is used in the training phase [5]
\mathcal{H}_k	Subspace of the training vector be-
	longing to the class \mathcal{C}_k
\mathcal{H}	Complete space of the input vector,
	i.e., $\mathcal{H}_1 \cup \mathcal{H}_2 \cup \cdots \mathcal{H}_K$
\mathcal{X} [18]	Set of all vectors in the training,
	batch, validation, or test dataset that
	was misclassified
$\mathscr{E}(\mathbf{w}), \mathscr{E}(\mathbf{w}(n)), \mathscr{E}(n)$	Cost function or objective function
	(the way it is written depends on the
	purpose of the text)
$J(\mathbf{w}), J(\mathbf{w}(n)), J(n)$	Alternative to the cost function
$\Delta \mathscr{E}(\mathbf{w}(n)), \Delta \mathscr{E}(n), \mathscr{E}(\mathbf{w}(n+1))$	Cost function or objective function
$\mathscr{E}(\mathbf{w}(n))$	(the way it is written depends on the
	purpose of the text)
	r · r · · · · · · · · · · · · · · · · ·
$\mathscr{E}_{\mathrm{av}}(\cdot)$	Error energy averaged over the train-
$\mathscr{E}_{\mathrm{av}}(\cdot)$,
$\mathscr{C}_{\operatorname{av}}(\cdot)$ $\Lambda(\cdot)$	Error energy averaged over the train-
$\Lambda(\cdot)$	Error energy averaged over the training sample or the empirical risk [5]
$\frac{\Lambda(\cdot)}{\Lambda_l(\cdot)}$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function
$\Lambda(\cdot)$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function Log-likelihood function
$\frac{\Lambda(\cdot)}{\Lambda_l(\cdot)}$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function Log-likelihood function Estimated Pearson correlation coeffi-
$\Lambda(\cdot)$ $\Lambda_{l}(\cdot)$ $\hat{\rho}_{x,y}$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function Log-likelihood function Estimated Pearson correlation coefficient between x and y
$\Lambda(\cdot)$ $\Lambda_{l}(\cdot)$ $\hat{\rho}_{x,y}$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function Log-likelihood function Estimated Pearson correlation coefficient between x and y Distance of the margin of separation between two classes (Support Vector
$\Lambda(\cdot)$ $\Lambda_{l}(\cdot)$ $\hat{\rho}_{x,y}$	Error energy averaged over the training sample or the empirical risk [5] Likelihood function Log-likelihood function Estimated Pearson correlation coefficient between x and y Distance of the margin of separation

5 Linear Algebra

5.1 Common matrices and vectors

\mathbf{W}, \mathbf{D}	Diagonal matrix
P	Projection matrix; Permutation ma-
	trix
J	Jordan matrix
L	Lower matrix
U	Upper matrix
$\overline{\mathbf{C}}$	Cofactor matrix
$\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$	Cofactor matrix of A
S	Symmetric matrix
Q	Orthogonal matrix
\mathbf{I}_N	$N \times N$ -dimensional identity matrix

$0_{M imes N}$	$M \times N$ -dimensional null matrix
0_N	N-dimensional null vector
$\overline{1_{M imes N}}$	$M \times N$ -dimensional ones matrix
$\overline{1_N}$	N-dimensional ones vector
0	Null matrix, vector, or tensor (di-
	mensionality understood by context)
1	Ones matrix, vector, or tensor (di-
	mensionality understood by context)

5.2 Indexing

$x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$	Element in the position
	(i_1, i_2, \ldots, i_N) of the tensor \mathcal{X}
$\mathcal{X}^{(n)}$	<i>n</i> th tensor of a nontemporal sequence
$\mathbf{x}_n, \mathbf{x}_{:n}$	nth column of the matrix X
\mathbf{x}_{n} :	nth row of the matrix X
$\mathbf{x}_{i_1,\ldots,i_{n-1},:,i_{n+1},\ldots,i_N}$	Mode- n fiber of the tensor \mathcal{X}
$X_{:,i_2,i_3}$	Column fiber (mode-1 fiber) of the
	thrid-order tensor \mathcal{X}
$\mathbf{x}_{i_1,:,i_3}$	Row fiber (mode-2 fiber) of the thrid-
	order tensor \mathcal{X}
$\mathbf{x}_{i_1,i_2,:}$	Tube fiber (mode-3 fiber) of the
	thrid-order tensor \mathcal{X}
$X_{i_1,:,:}$	Horizontal slice of the thrid-order
	tensor \mathcal{X}
$\mathbf{X}_{:,i_2,:}$	Lateral slices slice of the thrid-order
	tensor \mathcal{X}
$\mathbf{X}_{i_3}, \mathbf{X}_{:,:,i_3}$	Frontal slices slice of the thrid-order
	tensor \mathcal{X}

5.3 General operations

$\langle \mathbf{a}, \mathbf{b} angle , \mathbf{a}^ op \mathbf{b}, \mathbf{a} \cdot \mathbf{b}$	Inner or dot product
$\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{ op}$	Outer product
8	Kronecker product
· ·	Hadamard (or Schur) (elementwise)
	product
.⊙n	nth-order Hadamard power
$. \odot \frac{1}{n}$	nth-order Hadamard root
Ø	Hadamard (or Schur) (elementwise)
	division
♦	Khatri-Rao product

\otimes	Kronecker Product
\times_n	<i>n</i> -mode product

5.4 Operations with matrices and tensors

\mathbf{A}^{-1}	Inverse matrix
$\mathbf{A}^{+},\mathbf{A}^{\dagger}$	Moore-Penrose left pseudoinverse
$\frac{\mathbf{A}^{T}, \mathbf{A}^{T}, \mathbf{A}^{t}, \mathbf{A}^{t} [31]}{\mathbf{A}^{-T}}$	Transpose
$\mathbf{A}^{-\top}$	Transpose of the inverse, i.e.,
	$(\mathbf{A}^{-1})^{T} = (\mathbf{A}^{T})^{-1} [16, 27]$
\mathbf{A}^*	Complex conjugate
\mathbf{A}^{H}	Hermitian
$\ \mathbf{A}\ _{\mathrm{F}}$	Frobenius norm
A	Matrix norm
$ \mathbf{A} , \det(\mathbf{A})$	Determinant
$\operatorname{diag}\left(\mathbf{A}\right)$	The elements in the diagonal of A
E [A]	Vectorization: stacks the columns of
	the matrix \mathbf{A} into a long column vec-
	tor
$\mathbf{E}_d\left[\mathbf{A}\right]$	Extracts the diagonal elements of a
	square matrix and returns them in a
	column vector
$\mathbf{E}_{l}\left[\mathbf{A} ight]$	Extracts the elements strictly below
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_{u}\left[\mathbf{A}\right]$	Extracts the elements strictly above
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_b\left[\mathbf{A} ight]$	Block vectorization operator: stacks
	square block matrices of the input
	into a long block column matrix
$\operatorname{unvec}\left(\mathbf{A}\right)$	Reshapes a column vector into a ma-
	trix
$\operatorname{tr}\{\mathbf{A}\}$	trace
$\mathbf{X}_{(n)}$	<i>n</i> -mode matricization of the tensor \mathcal{X}

5.5 Operations with vectors

$\ \mathbf{a}\ $	l_1 norm, 1-norm, or Manhattan norm
$\ \mathbf{a}\ , \ \mathbf{a}\ _2$	l_2 norm, 2-norm, or Euclidean norm

$\ \mathbf{a}\ _p$	l_p norm, p -norm, or Minkowski norm
$\ \mathbf{a}\ _{\infty}$	l_{∞} norm, ∞ -norm, or Chebyshev
	norm
diag (a)	Diagonalization: a square, diagonal
	matrix with entries given by the vec-
	tor a

5.6 Decompositions

Λ	Eigenvalue matrix [33]
Q	Eigenvectors matrix; Orthogonal ma-
	trix of the QR decomposition[33]
\mathbf{R}	Upper triangular matrix of the QR
	decomposition[33]
U	Left singular vectors[33]
$egin{array}{c} U_r \ \Sigma \ \Sigma_r \ \end{array}$	Left singular nondegenerated vectors
Σ	Singular value matrix
Σ_r	Singular value matrix with nonzero
	singular values in the main diagonal
Σ^+	Singular value matrix of the pseu-
	doinverse [33]
Σ_r^+	Singular value matrix of the pseu-
	doinverse with nonzero singular val-
	ues in the main diagonal
V	Right singular vectors [33]
$\overline{\mathbf{V}_r}$	Right singular nondegenerated vec-
	tors
$\operatorname{eig}\left(\mathbf{A} ight)$	Set of the eigenvalues of A [9, 24, 27]
$\llbracket \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots bracket$	CANDECOMP/PARAFAC (CP) de-
	composition of the tensor \mathcal{X} from the
	outer product of column vectors of \mathbf{A} ,
	B, C,
$\llbracket oldsymbol{\lambda}; \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots bracket$	Normalized CANDE-
	COMP/PARAFAC (CP) decom-
	position of the tensor \mathcal{X} from the
	outer product of column vectors of A , B , C ,

5.7 Spaces and sets

5.7.1 Common spaces and sets

\mathbb{R}	Set of real numbers
a,b	Closed interval of a real set from a to
	b
(a,b)	Opened interval of a real set from a
	to b
$\boxed{[a,b),(a,b]}$	Half-opened intervals of a real set
	from a to b
\mathbb{C}	Set of complex numbers
\mathbb{Z}	Set of integer number
$\boxed{\{1,2,\ldots,n\}}$	Discrete set containing the integer el-
	ements $1, 2, \ldots, n$
$\mathbb{B} = \{0, 1\}$	Boolean set
Ø	Empty set
N	Set of natural numbers
$\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$	Real or complex space (field)
$\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$	$I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or
	complex) space
K ₊	Nonnegative real (or complex) space
	[6]
K++	Positive real (or complex) space, i.e.,
	$\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [6]$
U	Universe
2^A	Power set of A

5.7.2 Convex sets (or spaces)

\mathbb{S}^n [10], \mathcal{S}^n [6]	Conic set of the symmetric matrices
	in $\mathbb{R}^{n \times n}$
$\mathbb{S}^n_+,\mathcal{S}^n_+$	Conic set of the symmetric positive
	semidefinite matrices in $\mathbb{R}^{n \times n}$ [6]
$\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$	Conic set of the symmetric positive
	definite matrices in $\mathbb{R}^{n\times n}$, i.e., \mathbb{S}^n_{++} =
	$\mathbb{S}^n_+ \setminus \{0\} \ [6]$
\mathbb{H}^n	Set of all hermitian matrices in $\mathbb{C}^{n\times n}$
conv C	Convex hull
$\operatorname{aff} C$	Affune hull
\mathcal{R}	Ray
\mathcal{H}	Hyperplane
$\mathcal{H}_+, \mathcal{H}$	Positive/negative halfspace
$B(\mathbf{x}_{c},r)$	Euclidean ball with radium r and
	centered at \mathbf{x}_c
$\overline{\mathcal{E}}$	Ellipsoid
C	Norm cone

K	Proper cone
K^*	Dual cone
\mathcal{P}	Polyhedra
S	Simplex
C_{α}	α -sublevel set
epi f	Epigraph of the function f
hypo f	Hypograph of the function f

5.7.3 Spaces from matrices or vectors

$\mathrm{span}\left\{\mathbf{a}_{1},\mathbf{a}_{2},\ldots,\mathbf{a}_{n}\right\}$	Vector space spanned by the argument vectors [16]
$C(\mathbf{A})$, columnspace(\mathbf{A}), range(\mathbf{A}),	Columnspace, range or image, i.e.,
$\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$	the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$, where
	\mathbf{a}_i is the ith column vector of the ma-
	trix A [25, 33]
$C(\mathbf{A}^{H})$	Row space (also called left
	columnspace) [25, 33]
$\overline{N(\mathbf{A})}$, nullspace(\mathbf{A}), null(\mathbf{A}), kernel(\mathbf{A}	Nullspace (or kernel space) [25, 33,
	34]
$N(\mathbf{A}^{H})$	Left nullspace
rank A	Rank, that is, $\dim(\operatorname{span}\{A\}) =$
	$\dim \left(\mathrm{C} \left(\mathbf{A} \right) \right) \left[25 \right]$
nullity (A)	Nullity of \mathbf{A} , i.e., dim $(N(\mathbf{A}))$

5.8 Set operations

A + B	Set addition (Minkowski sum), i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
	[22]
A - B	Minkowski difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
$A\ominus B$	Pontryagin difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} $ [22]
$A \setminus B, A - B$	Set difference or set subtraction, i.e.,
	$A \setminus B = \{x x \in A \land x \notin B\}$ the set con-
	taining the elements of A that are not
	in $B[30]$
$A \cup B$	Set of union
$A \cap B$	Set of intersection
$A \times B$	Cartesian product

A^n	$A \times A \times \cdots \times A$
A	$A \times A \times \cdots \times A$
	n times
A^{\perp}	Orthogonal complement of A , e.g.,
	$N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [6]$
$\mathbf{a} \perp \mathbf{b}$	\mathbf{a} is orthogonal to \mathbf{b}
a ∠ b	a is not orthogonal to b
$A \oplus B$	Direct sum, i.e., each $\mathbf{v} \in$
	$\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a
	unique representation of $\sum \mathbf{a}_i$ with
	$\mathbf{a}_i \in S_i$. That is, they expand to a
	space. Note that $\{S_i\}$ might not be
	orthogonal each other [16]
	orthogonar each other [10]
$A \stackrel{\perp}{\oplus} B$	Direct sum of two spaces that are or-
$A \stackrel{\perp}{\oplus} B$	Direct sum of two spaces that are orthogonal and span a <i>n</i> -dimensional
$A \stackrel{\perp}{\oplus} B$	thogonal and span a n -dimensional
$A \stackrel{\perp}{\oplus} B$	thogonal and span a <i>n</i> -dimensional space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
$A \stackrel{\perp}{\oplus} B$	thogonal and span a n -dimensional space, e.g., $C(\mathbf{A}^{\top}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{\top})^{\perp} = \mathbb{R}^{n}$ (this decomposition of \mathbb{R}^{n} is
$A \stackrel{\perp}{\oplus} B$	thogonal and span a <i>n</i> -dimensional space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
$A \stackrel{\perp}{\oplus} B$ $\overline{A, A^c}$	thogonal and span a n -dimensional space, e.g., $C(\mathbf{A}^{\top}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{\top})^{\perp} = \mathbb{R}^{n}$ (this decomposition of \mathbb{R}^{n} is called the orthogonal decomposition
	thogonal and span a n -dimensional space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} = \mathbb{R}^{n}$ (this decomposition of \mathbb{R}^{n} is called the orthogonal decomposition induced by \mathbf{A}) [6]
$\overline{A,A^c}$	thogonal and span a n -dimensional space, e.g., $C(\mathbf{A}^{T}) \overset{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} = \mathbb{R}^{n}$ (this decomposition of \mathbb{R}^{n} is called the orthogonal decomposition induced by \mathbf{A}) [6] Complement set (given U)
$egin{array}{c} ar{A},A^c \ \#A, A \end{array}$	thogonal and span a n -dimensional space, e.g., $C(\mathbf{A}^{T}) \overset{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} = \mathbb{R}^n$ (this decomposition of \mathbb{R}^n is called the orthogonal decomposition induced by \mathbf{A}) [6] Complement set (given U) Cardinality of A

5.9 Inequalities

$\mathcal{X} \leq 0$	Nonnegative tensor
$\mathbf{a} \leq_K \mathbf{b}$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the conic subset K in
	the space $\mathbb{R}^n[6]$
$\mathbf{a} \prec_K \mathbf{b}$	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the interior of
	the conic subset K in the space $\mathbb{R}^n[6]$
$a \le b$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-
	thant conic subset, \mathbb{R}^n_+ , in the space
	\mathbb{R}^n .[6]
a < b	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-
	thant conic subset, \mathbb{R}^n_{++} , in the space
	$\mathbb{R}^n[6]$

$\mathbf{A} \leq_K \mathbf{B}$	Generalized inequality meaning that
	${f B}-{f A}$ belongs to the conic subset K
	in the space $\mathbb{S}^n[6]$
$\mathbf{A} \prec_K \mathbf{B}$	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the interior of
	the conic subset K in the space $\mathbb{S}^n[6]$
$A \leq B$	Generalized inequality meaning that
	$\mathbf{B} - \mathbf{A}$ belongs to the positive semidef-
	inite conic subset, \mathbb{S}_{+}^{n} , in the space
	$\mathbb{S}^n[6]$
A < B	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the positive or-
	thant conic subset, \mathbb{S}_{++}^n , in the space
	$\mathbb{S}^n[6]$

6 Communication systems

6.1 Common symbols

B	One-sided bandwidth of the trans-
	mitted signal, in Hz
\overline{W}	One-sided bandwidth of the trans-
	mitted signal, in rad/s
x_i	Real or in-phase part of x
x_q	Imaginary or quadrature part of x
f_c, f_{RF}	Carrier frequency (in Hertz)
f_L	Carrier frequency in L-band (in
	Hertz)
f_{IF}	Intermediate frequency (in Hertz)
f_s	Sampling frequency or sampling rate
	(in Hertz)
T_s	Sampling time interval/duration/pe-
	riod
R	Bit rate
T	Bit interval/duration/period
T_c	Chip interval/duration/period
T_{sy}, T_{sym}	Symbol/signaling[28] interval/dura-
	tion/period
S_{RF}	Transmitted signal in RF
s_{FI}	Transmitted signal in FI
S, S_l	Lowpass (or baseband) equivalent
	signal or envelope complex of trans-
	mitted signal

r_{RF}	Received signal in RF
r_{FI}	Received signal in FI
r, r_l	Lowpass (or baseband) equivalent
	signal or envelope complex of re-
	ceived signal
φ	Signal phase
ϕ_0	Initial phase
η_{RF}, w_{RF}	Noise in RF
$\overline{\eta_{FI}, w_{FI}}$	Noise in FI
$\overline{\eta, w}$	Noise in baseband
τ	Timing delay
$\Delta \tau$	Timing error (delay - estimated)
φ	Phase offset
$\frac{\Delta arphi}{f_d}$	Phase error (offset - estimated)
f_d	Linear Doppler frequency
Δf_d	Frequency error (Doppler frequency -
	estimated)
ν	Angular Doppler frequency
Δv	Frequency error (Doppler frequency -
	estimated)
γ, A	Transmitted signal amplitude
γ_0, A_0	Combined effect of the path loss and
	antenna gain

6.2 Fading multipath channels

$t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda \ [28]$	Support temporal of the signal. λ is obtained after taking the Fourier transform on t .
$\tau \stackrel{\mathcal{F}}{\longleftrightarrow} f \ [28]$	Second support temporal of the signal $(c(t))$ varies with with the input
	at the time τ). f is obtained after taking the Fourier transform on τ .
$c(t,\tau) [28]$	Complex envelope of the channel response at the time t due to an impulse applied at the $t-\tau$
C(f,t) [28]	Transfer function of $c(t, \tau)$ in τ
$\alpha(t,\tau)$ [28]	Attenuation of $c(t,\tau)$, i.e., $c(t,\tau) = \alpha(t,\tau)e^{e\pi f_c\tau}$
$R_c(\tau_1, \tau_2, \Delta t)$ [28]	Autocorrelation function of
	$c(t,\tau)$, i.e., $R_c(\tau_1,\tau_2,\Delta t) = $ $\mathbb{E}\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right]$

$R_c(\tau, \Delta t)$ [28]	Autocorrelation function of $c(t, \tau)$ as-
	suming uncorrelated scattering
$R_c(\tau), R_c(\tau, \Delta t)\Big _{\Delta t=0}$ [28]	Multipath intensity profile or delay
	power spectrum
$R_C(\Delta f, \Delta t), R_C(f_1, f_2; \Delta t),$	Spaced-frequency, spaced-time corre-
$\mathrm{E}\left[C(f_1,t),C(f_2,t+\Delta t)\right],$	lation function $(\Delta f = f_2 - f_1)$
${\cal F}_{ au}\left\{R_c(au,\Delta t)\right\}\left[15 ight]$	
$R_C(\Delta f), \qquad R_C(\Delta f, \Delta t)\Big _{\Delta t=0} \qquad [28],$	Spaced-frequency correlation func-
$\mathcal{F}\left\{R_c(\tau)\right\}$ [15]	tion
$(\Delta f)_c$	Coherence bandwidth of $c(t)$, that
	is, the frequency interval in which
	$R_C(\Delta f)$ is nonzero [28]
T_m	Multipath spread of the channel, that
	is, the time interval in which $R_c(\tau)$ is
	nonzero $(T_m \approx 1/(\Delta f)_c)$ [28]
$ \left. \left$	Spaced-time correlation function [28]
$S_C(\lambda)$ [28], $\mathcal{F}\{R_C(\Delta t)\}$ [15]	Doppler power spectrum
$(\Delta t)_c$	Coherence time of $c(t)$, that is, the
	time interval in which $R_C(\Delta t)$ is
	nonzero [28]
B_m	Multipath spread of the channel, that
	is, the frequency interval in which
	$S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$ [28]
$S_C(\tau, \lambda)$ [28], $\mathcal{F}_{\Delta f, \Delta t} \left\{ R_C(\Delta f, \Delta t) \right\}$ [15]	Scattering function

7 Discrete mathematics

7.1 Quantifiers, inferences

Α	For all (universal quantifier) [17]
3	There exists (existential quantifier)
	[17]
<u></u> ∄ ∃!	There does not exist [17]
∃!	There exists an unique [17]
\exists_n	There exists exactly n [30]
	Belongs to [17]
∉	Does not belong to [17]
::	Because [17]
<u> </u> ,:	Such that, sometimes that parenthe-
	ses is used [17]

$\overline{},,(\cdot)$	Used to separate the quantifier with
	restricted domain from its scope, e.g.,
	$\forall x < 0 (x^2 > 0) \text{ or } \forall x < 0, x^2 > 0$
	[17]
·:	Therefore [17]

7.2 Propositional Logic

$\neg a$	Logical negation of a [30]
$a \wedge b$	Conjunction (logical AND) operator
	between a and $b[30]$
$a \lor b$	Disjunction (logical OR) operator be-
	tween a and $b[30]$
$a \oplus b$	Exclusive OR (logical XOR) operator
	between a and $b[30]$
$a \rightarrow b$	Implication (or conditional) state-
	ment[30]
$a \leftrightarrow b$	Bi-implication (or biconditional)
	statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$
	[30]
$a \equiv b, a \iff b, a \Leftrightarrow b$	Logical equivalence, i.e., $a \leftrightarrow b$ is a
	tautology[30]

7.3 Operations

a	Absolute value of a
log	Base-10 logarithm or decimal loga-
	rithm
ln	Natual logarithm
$\operatorname{Re}\left\{ x\right\}$	Real part of x
$\operatorname{Im}\left\{ x\right\}$	Imaginary part of x
<u> ۲۰</u>	Phase (complex argument)
$x \mod y$	Remainder, i.e., $x - y \lfloor x/y \rfloor$, for $y \neq 0$
x div y	Quotient [30]
$x \equiv y \pmod{m}$	Congruent, i.e., $m \setminus (x - y)$ [30]
$\operatorname{frac}(x)$	Fractional part, i.e., $x \mod 1$ [17]
$a \setminus b, a \mid b$	b is a positive integer multiple of a ,
	i.e., $\exists n \in \mathbb{Z}_{++} \mid b = na \ [17, 30]$
$a \ \ b, a \ \ b$	b is not a positive integer multiple of
	$a, \text{ i.e., } \nexists n \in \mathbb{Z}_{++} \mid b = na \ [17, \ 30]$
[·]	Ceiling operation [17]
[.]	Floor operation [17]

8 Vector Calculus

abla	Vector differential operator (Nabla symbol), i.e., ∇f is the gradient of the scalar-valued function f , i.e., f : $\mathbb{R}^n \to \mathbb{R}$
t,(u,v)	Parametric variables commonly used, t for one variable, (u, v) for two variables[32]
$\mathrm{d}\mathbf{l},\mathrm{d}\mathbf{r}$	Vector position, i.e., (x, y, z) . Stewart [32] utilizes the letter \mathbf{r} to denote it, but it appears in many electromagnetics books as dl
$\mathbf{l}(t)$	Vector position parametrized by t , i.e., $(x(t), y(t), z(t))$ [29, 32]
l'(t), dl/dt	First derivative of $I(t)$, i.e., the tangent vector of the curve $(x(t), y(t), z(t))$ [32]
$\mathbf{T}(t), \mathbf{u}(t)$	Tangent unit vector of $\mathbf{l}(t)$, i.e., $\mathbf{u}(t) = \mathbf{l}'(t)/ \mathbf{l}'(t) [23, 32]$
$\mathbf{n}(t), \left(\frac{y'(t)}{ l'(t) }, -\frac{x'(t)}{ l'(t) }\right)$	Normal vector of $\mathbf{l}(t)$, i.e., $\mathbf{n}(t) \perp \mathbf{T}(t)[32]$
C	Contour that traveled by $l(t)$, for $a \le t \le b$ [32]
L, L(C)	Total length of the contour C (which can be defined the vector \mathbf{l} , parametrized by t), i.e., $L_C = \int_a^b \mathbf{l}'(t) \mathrm{d}t[32]$
s(t)	Length of the arc, which can be defined by the vector l and t , that is, $s(t) = \int_a^t \mathbf{l}'(u) \mathrm{d}u \ (s(b) = L)[32]$
$\mathrm{d}s$	Differential operator of the length of the contour C , i.e., $ds = \mathbf{l}'(t) dt$ [32]
$\int_C f(1) \mathrm{d}s, \int_a^b f(1(t)) l'(t) \mathrm{d}t$	Line integral of the function $f: \mathbb{R}^n \to \mathbb{R}$ along the contour C [4, 32]
$\int_C \mathbf{F} \cdot d\mathbf{l}, \int_a^b \mathbf{F}(\mathbf{l}(t)) \cdot \mathbf{l}'(t) dt, \int_C \mathbf{F} \cdot \mathbf{T} ds$	Line integral of vector field \mathbf{F} along the contour C [4, 32]
$\int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F}, \int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{l}$	Alternative notation to the line integral, where the parametric variable t goes from a to b , making r goes from $\mathbf{l}(a) = \mathbf{a}$ to $\mathbf{l}(b) = \mathbf{b}$ [4]

\oint_C, \oint_C	Line integral (also called contour integral) along the closed contour C . The arrow indicates the contour integral orientation, which is counterclockwise, by default.
$ \oint_S $	Surface integral over the closed surface S
l(u,v)	Vector position $(x(u, v), y(u, v), z(u, v))$ parametrized by (u, v)
$\overline{1_u}$	$(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)$
$\overline{1_{\nu}}$	$(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$
$\mathrm{d}A$	Differential operator of a 2D area (denoted by D or R) in the \mathbb{R}^2 domain. This differential operator can
	be solved in different ways (rectangular, polar, cylindric, etc) [32]
D,R	Integration domain in which dA is integrated, i.e., $\iint_D f dA$ [32]
S	Smooth surface S , i.e., a 2D area in a 3D space (\mathbb{R}^3 domain)
$\mathrm{d}S$, $ \mathbf{l}_u \times \mathbf{l}_v $ $\mathrm{d}A$	Differential operator of a 2D area in a 3D domain (an surface). Note that $dS = \mathbf{l}_u \times \mathbf{l}_v dA$ should be accompanied with the change of the integration interval(from S to D)
$A(S), \iint_S dS, \iint_D \mathbf{l}_u \times \mathbf{l}_v dA$	Area of the surface S parametrized by (u, v) , in which dA is the area defined in the D domain (which is form by the u -by- v graph)
$\mathrm{d}V$	Differential operator of a shape volume (denoted by E) in \mathbb{R}^3 domain, i.e., $\iiint_E dV = V$
E	Integration domain in which dV is integrated, i.e., $\iiint_E f dV$ [32]
$V, \iint_D f \mathrm{d}A, \iiint_E f \mathrm{d}V$	Volume of the function f over the regions D (in the case of double integrals) or E (in the case of triple integrals)
$\frac{\iint_{S} f \mathrm{d}S, \iint_{D} f \mathbf{l}_{u} \times \mathbf{l}_{v} \mathrm{d}A}{\mathbf{n}(u, v), \frac{\mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v)}{ \mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v) }}$	Surface integral over S
$\mathbf{n}(u,v), \frac{\mathbf{l}_{u}(u,v) \times \mathbf{l}_{v}(u,v)}{ \mathbf{l}_{u}(u,v) \times \mathbf{l}_{v}(u,v) }$	Normal vector of of the smooth surface S

$ \iint_{S} \mathbf{F} \cdot \mathbf{n} dS, \iint_{S} \mathbf{F} \cdot d\mathbf{S}, \iint_{D} \mathbf{F} \cdot (\mathbf{l}_{u} \times \mathbf{l}_{v}) dA \iint_{S} \mathbf{F} \cdot \mathbf{n} dS, \iint_{S} \mathbf{F} \cdot d\mathbf{S}, $	Flux integral of vector field \mathbf{F} through the smooth surface S ($\mathbf{n} \mathrm{d} S \triangleq \mathrm{d} \mathbf{S}$)
$ \iint_{S} \mathbf{F} \cdot \mathbf{n} dS, \oiint_{S} \mathbf{F} \cdot d\mathbf{S}, \iint_{D} \mathbf{F} \cdot (\mathbf{l}_{u} \times \mathbf{l}_{v}) dA $	Flux integral of vector field \mathbf{F} through the smooth and closed surface S $(\mathbf{n} dS \triangleq d\mathbf{S})$
$\nabla \times \mathbf{F}$, curl \mathbf{F}	Curl (rotacional) of the vector field F
$\nabla \cdot \mathbf{F}, \operatorname{div} \mathbf{F}$	Divercence of the vector field F
$ \overline{\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,} \\ \frac{\partial^2 f}{\partial x^2} + \frac{\partial^2 f}{\partial y^2} + \frac{\partial^2 f}{\partial z^2} $	Scalar Laplacian operator (performed on a scalar-valued function $f: \mathbb{R}^n \to \mathbb{R}$)
$\nabla^{2}\mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla(\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$ $(\partial^{2}\mathbf{F}/\partial x^{2}, \partial^{2}\mathbf{F}/\partial y^{2}, \partial^{2}\mathbf{F}/\partial z^{2})$	Vector Laplacian operator (performed on a vector field, i.e., a vector-valued function, $\mathbf{F}: \mathbb{R}^n \to \mathbb{R}^n$). ∇^2 denotes the scalar (vector) Laplacian if the function is scalar-valued (vector-valued). The notation Δ must be avoided as it is overused in many contexts

9 Electromagnetic waves

Φ	Electric flux (scalar) (in V m)
J	Electric current density vector (in
	A/m^2)
H	Magnetic field vector (in A/m)
В	Magnetic flux density vector (in
	$Wb/m^2 = T$
$q_{ m free}$	Free electric charge (in C)
$q_{ m bound}$	Bound electric charge (in C)
$q, q_{\text{free}} + q_{\text{bound}}$	Electric charge (in C)
$ ho_{ ext{free}}$	Free electric charge density
$ ho_{ m bound}$	Electric charge density
$\rho, \rho_{\mathrm{free}} + \rho_{\mathrm{bound}}$	Electric charge density (it can be
	in C/m^3 , C/m^2 or C/m depending
	whether it is a volume, surface, or
	line shapes)
f	Electrostatic force (Coulomb force),
	(in kg m/s^2)
ε	Electric permittivity(in F/m) [29]
$\overline{\varepsilon_r}$	Relative electric permittivity or di-
	electric constant (in F/m) [29]

	Til - 4:: 14!: 4 :
$oldsymbol{arepsilon}_0$	Electric permittivity in vacuum,
	$8.854 \times 10^{-12} \mathrm{F/m}$ [29]
E	Electric field vector (in V/m)
D	Electric flux density, electric dis-
	placement, or electric induction vec-
	tor (in C/m^2)
$\Phi_D, \Psi, \oiint_S \mathbf{D} \mathrm{d}\mathbf{S}$	Electric flux (D -filed flux) [13]
$\Phi_E, \oiint_S \mathbf{E} \mathrm{d}\mathbf{S}$	Electric flux (E-filed flux) [14]
P	Electric polarization of the material
	(in C/m^2)
Χe	Electric susceptibility (for linear and
	isotropic materials)
μ	Magnetic permeability
μ_0	Magnetic permeability in vacuum

10 Generic mathematical symbols

	Q.E.D.
	Equal by definition
:=, ←	Assignment [30]
<i>≠</i>	Not equal
∞	Infinity
j	$\sqrt{-1}$

11 Abbreviations

PS: Only names of techniques and algorithms or usual abbreviations are considered.

wrt.	With respect to
st.	Subject to
iff.	If and only if
EVD	Eigenvalue decomposition, or eigen-
	decomposition [25]
SVD	Singular value decomposition
СР	CANDECOMP/PARAFAC
SGD	Stochastic gradient descent
SVM	Support vector machine
BPNN	Backpropagation neural network [21]
RBF	Radial basis function
