1 Font notation

$a, b, c, \ldots, A, B, C, \ldots$	Scalars
a, b, c, \dots	Vectors
A, B, C, \dots	Matrices
$\mathcal{A}, \mathcal{B}, \mathcal{C}, \dots$	Tensors
$A, B, C, \ldots, A, B, C, \ldots, A, B, C, \ldots$	Sets

2 Signals and functions

2.1 Time indexing

x(t)	Continuous-time t
$x[n], x[k], x[m], x[i], \dots$	Discrete-time n, k, m, i, \ldots (parenthe-
$x_n, x_k, x_m, x_i, \dots$	sis should be adopted only if there
$x(n), x(k), x(m), x(i), \dots$	are no continuous-time signals in the
	context to avoid ambiguity)
$x[((n-m))_N][31], x((n-m))_N[25]$	Circular shift in m samples within a
	N-samples window

2.2 Common signals

$\delta(t)$	Delta function
$\delta[n], \delta_{i,j}$	Kronecker function $(n = i - j)$
h(t), h[n]	Impulse response (continuous and
	discrete time)
$\tilde{x}[n], \tilde{x}(t)$	Periodic discrete- or continuous-time
	signal
$\hat{x}[n], \hat{x}(t)$	Estimate of $x[n]$ or $x(t)$
$\dot{x}[m]$	Interpolation of $x[n]$

2.3 Common functions

$\mathcal{O}(\cdot), O(\cdot)$	Big-O notation
$\Gamma(\cdot)$	Gamma function
$Q(\cdot)$	Quantization function
$\operatorname{sgn}(\cdot)$	Signum function
$\tanh(\cdot)$	Hyperbolic tangent function
$I_{\alpha}(\cdot)$	Modified Bessel function of the first
	kind and order α

$\binom{n}{n}$	Rinomial goofficient
$\setminus k$	Dinomiai coenicient

2.4 Operations and symbols

$f: A \to B$	A function f whose domain is A and
	codomain is B
$\mathbf{f}:A\to\mathbb{R}^n$	A vector-valued function \mathbf{f} , i.e., $n \geq 2$
$f^n, x^n(t), x^n[k]$	<i>n</i> th power of the function f , $x[n]$ or
, (// E]	x(t)
$f^{(n)}, x^{(n)}(t)$	nth derivative of the function f or
•	x(t)
$f', f^{(1)}, x'(t)$	1th derivative of the function f or
	x(t)
$f'', f^{(2)}, x''(t)$	2th derivative of the function f or
	x(t)
$ \operatorname{argmax}_{x \in \mathcal{A}} f(x) $	Value of x that minimizes x
$ \frac{x \in \mathcal{A}}{\arg\min f(x)} $ $ x \in \mathcal{A} $	Value of x that minimizes x
$f(\mathbf{x}) = \inf_{\mathbf{y} \in A} g(\mathbf{x}, \mathbf{y})$	Infimum, i.e., $f(\mathbf{x}) =$
$\mathbf{y} {\in} \mathcal{A}$	$\min \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g) \},\$
	which is the greatest lower bound of
	this set [10]
$f(\mathbf{x}) = \sup g(\mathbf{x}, \mathbf{y})$	Supremum, i.e., $f(\mathbf{x}) =$
$\mathbf{y} \in \mathcal{A}$	$\max \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g) \}$
	which is the least upper bound of
	this set $[10]$
$f \circ g$	Composition of the functions f and
	g
*	Convolution (discrete or continuous)
⊗ [17], N [31]	Circular convolution

2.5 Digital signal processing

W_N	Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [25]
N	Number of samples in the DFT/FFT
Ω [25]	Continuous angular frequency (in rad/s)
	1au/5)

	Diamete exemples frequency Ag () is
ω	Discrete angular frequency. As ω is
	also used to denote continuous angular fraguency, autoida the DCB con
	lar frequency outside the DSP con-
	text, it is always convenient to state
	that it denotes the discrete frequency
	when it does
f_c	Continuous linear frequency (in Hz)
f	Discrete linear frequency. As f is also
	used to denote continuous linear fre-
	quency outside the DSP context, it
	is always convenient to state that it
	denotes the discrete frequency when
	it does
$\mathcal{R}_N[n]$	Rectangular window used to cut off
	the discrete sequences [25]
$T[31], T_s$	Sampling period
$\frac{f_s}{\Omega_s}$	Sampling frequency (in Hz), i.e., $1/T$
Ω_s	Sampling frequency (in rad/s), i.e.,
	$2\pi f_s$
Ω_N [31], B	One-sided effective bandwidth of the
	continuous-time signal spectrum
ω_s	Stop frequency [25]
$\overline{\omega_p}$	Pass frequency [25]
$\Delta \omega$	$\omega_s - \omega_p$ [25]
ω_c	Cutoff frequency [25]
s(t)	Impulse train
$gdr \left[H(e^{j\omega}) \right] [31]$	Group delay of $H(e^{j\omega})$
$\angle H(e^{j\omega})$ [31]	Phase response of $H(e^{j\omega})$
$H(e^{j\omega})$ [31]	Magnitude (or gain) of $H(e^{j\omega})$
$x_c(t)$ [31], $x(t)$	Continuous-time signal
$x_s(t)$	Sampled version of $x(t)$, i.e., $x(t)s(t)$
$\frac{3}{x_r(t)}$	Reconstruction of $x(t)$ from interpo-
,	lation
$-\tilde{x}[n]$	Periodic extension of the the aperi-
	odic signal $x[n]$
	[]

2.6 Transformations

$\mathcal{F}\left\{ \cdot ight\}$	Fourier transform (FT)
$\overline{\mathrm{DTFT}\left\{\cdot\right\},\mathrm{DFS}\left\{\cdot\right\},\mathrm{FFT}\left\{\cdot\right\}}$	Discrete-time Fourier Transform
	(DTFT), Discrete Fourier Transform (DFT), Discrete Fourier Series
	(DFS), respectively

$\mathcal{L}\left\{ \cdot \right\}$	Laplace transform
$\mathcal{Z}\left\{ \cdot \right\}$	z-transform
$\hat{x}(t), \hat{x}[n]$	Hilbert transform of $x(t)$ or $x[n]$
X(s)	Laplace transform of $x(t)$
X(f)	Fourier transform (FT) (in linear fre-
	quency, Hz) of $x(t)$
$X(j\omega)$	Fourier transform (FT) (in angular
	frequency, rad/sec) of $x(t)$
$X(e^{j\omega})$	Discrete-time Fourier transform
	(DTFT) of $x[n]$
$X[k], X(k), X_k$	Discrete Fourier transform (DFT) or
	fast Fourier transform (FFT) of $x[n]$,
	or even the Fourier series (FS) of the
	periodic signal $x(t)$
$\tilde{X}[k], \tilde{X}(k), \tilde{X}_k$	Discrete Fourier series (DFS) of $\tilde{x}[n]$
X(z)	z-transform of $x[n]$

3 Probability, statistics, and stochastic processes

3.1 Operators and symbols

$\mathrm{E}\left[\cdot ight],\mathbf{E}\left[\cdot ight]\left[30 ight],E\left[\cdot ight],\mathbb{E}\left[\cdot ight]$	Statistical expectation operator [16]
$E_u[\cdot], \mathbf{E}_u[\cdot][30], E_u[\cdot], \mathbb{E}_u[\cdot]$	Statistical expectation operator with
	respect to u
$\overline{\langle \cdot \rangle}$	Ensemble average
$\operatorname{var}\left[\cdot\right], \operatorname{VAR}\left[\cdot\right]$	Variance operator [9, 24, 29, 33]
$\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$	Variance operator with respect to u
$\operatorname{cov}\left[\cdot\right],\operatorname{COV}\left[\cdot\right]$	Covariance operator [9]
$\operatorname{cov}_{u}[\cdot], \operatorname{COV}_{u}[\cdot]$	Covariance operator with respect to
	u
μ_x	Mean of the random variable x
μ_x, m_x	Mean vector of the random variable
	x [11]
μ_n	nth-order moment of a random vari-
	able
$\frac{\sigma_x^2, \kappa_2}{\mathcal{K}_x, \mu_4}$	Variance of the random variable x
\mathcal{K}_x, μ_4	Kurtosis (4th-order moment) of the
	random variable x
κ_n	nth-order cumulant of a random vari-
	able
$\rho_{x,y}$	Pearson correlation coefficient be-
	tween x and y

$a \sim P$	Random variable a with distribution P
$\overline{\mathcal{R}}$	Rayleigh's quotient

3.2 Stochastic processes

$r_X(\tau), R_X(\tau)$	Autocorrelation function of the signal
	x(t) or $x[n]$ [30]
$S_{x}(f), S_{x}(j\omega)$	Power spectral density (PSD) of $x(t)$
	in linear (f) or angular (ω) frequency
$S_{x,y}(f), S_{x,y}(j\omega)$	Cross PSD of $x(t)$ and $y(t)$ in linear
	or angular (ω) frequency
R _x	(Auto)correlation matrix of $\mathbf{x}(n)$
$r_{x,d}(\tau), R_{x,d}(\tau)$	Cross-correlation between $x[n]$ and
	d[n] or $x(t)$ and $d(t)$ [30]
R _{xy}	Cross-correlation matrix of $\mathbf{x}(n)$ and
	$\mathbf{y}(n)$
$\mathbf{p}_{\mathbf{x}d}$	Cross-correlation vector
	between $\mathbf{x}(n)$ and $d(n)$
	$[{\bf diniz Adaptive Filtering 1997}]$
$c_x(\tau), C_x(\tau)$	Autocovariance function of the signal
	x(t) or $x[n]$ [30]
$C_x, K_x, \Sigma_x, \text{cov}[x]$	(Auto)covariance matrix of x [9, 24,
	29, 33, 40
$c_{xy}(\tau), C_{xy}(\tau)$	Cross-covariance function of the sig-
	$\operatorname{nal} x(t) \text{ or } x[n] [30]$
$C_{xy}, K_{xy}, \Sigma_{xy}$	Cross-covariance matrix of x and y

3.3 Functions

$Q(\cdot)$	Q-function, i.e., $P[\mathcal{N}(0,1) > x]$ [33]
$erf(\cdot)$	Error function [33]
$erfc(\cdot)$	Complementary error function i.e.,
	$\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x)$ [33]
P[A]	Probability of the event or set A [29]
$p(\cdot), f(\cdot)$	Probability density function (PDF)
	or probability mass function (PMF)
	[29]
$p(x \mid A)$	Conditional PDF or PMF [29]
$F(\cdot)$	Cumulative distribution function
	(CDF)

$\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$	First characteristic function (CF) of $x [33, 39]$
$M_X(t), \Phi_X(-jt), E\left[e^{tX}\right]$	Moment-generating function (MGF)
	of $x [33, 39]$
$\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$	Second characteristic function
$K_X(t)$, $\ln E\left[e^{tx}\right]$, $\ln M_X(t)$	Cumulant-generating function
	(CGF) of x [24]

3.4 Distributions

$\mathcal{N}(\mu, \sigma^2)$	Gaussian distribution of a random variable with mean μ and variance σ^2
$\mathcal{CN}(\mu, \sigma^2)$	Complex Gaussian distribution of a random variable with mean μ and variance σ^2
$\mathcal{N}(\mu, \Sigma)$	Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ
$\mathcal{CN}(oldsymbol{\mu},oldsymbol{\Sigma})$	Complex Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ
$\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$	Uniform distribution from a to b
$\chi^2(n), \chi_n^2$	Chi-square distribution with n degree of freedom (assuming that the Gaussians are $\mathcal{N}(0,1)$)
$\operatorname{Exp}(\lambda)$	Exponential distribution with rate parameter λ
$\Gamma(\alpha, \beta)$	Gamma distribution with shape parameter α and rate parameter β
$\Gamma(lpha, heta)$	Gamma distribution with shape parameter α and scale parameter $\theta = 1/\beta$
$\operatorname{Nakagami}(m,\Omega)$	Nakagami-m distribution with shape parameter or fading figure m and spread, scale, or shape parameter Ω
Rayleigh(σ)	Rayleigh distribution with scale parameter σ
$\operatorname{Rayleigh}(\Omega)$	Rayleigh distribution with the second moment $\Omega = E[x^2] = 2\sigma^2$
$\mathrm{Rice}(s,\sigma)$	Rice distribution with noncentrality parameter s and σ . s^2 represent the specular component power

$\operatorname{Rice}(\Omega, K), \operatorname{Rice}(A, K)$	Rice distribution with Rice factor
	$K = s^2/2\sigma^2$ and scale parameter $\Omega =$
	$A = s^{2} + 2\sigma^{2} = 2\sigma^{2}(K+1)$ (\$\Omega\$ is pref-
	ered over A)

4 Machine learning, optimization theory, and statistical signal processing

4.1 Matrix Calculus

$\mathbf{g}, abla f, rac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector, "used" in the steepest (or gradient) descent method
$\mathbf{g}_{\mathbf{x}}, \nabla_{\mathbf{w}} f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector with respect \mathbf{w} [9]
$ \frac{\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}}{\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f} [23] $	Jacobian matrix.
$\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f$ [23]	Hessian matrix. The notation ∇^2 is sometimes used in Matrix Calculus to denote the second-order vector derivative. However, it must be avoided since, in Vector Calculus, ∇^2 also denotes the Laplacian operator which in turn may be scalar or vector Laplacian operator depending on whether f is scalar- or vector-valued, respectively. Some discussion about can be found in [5–7]

4.2 Estimated terms

\mathbf{g} (or $\hat{\mathbf{g}}$ if the gradient vector is $\mathbf{g})$	Stochastic gradient descent (SGD), i.e., instantaneous approximation of gradient descent vector
$\hat{x}(t) \text{ or } \hat{x}[n]$	Estimate of $x(t)$ or $x[n]$
$\hat{\mathbf{\mu}}_{x},\hat{\mathbf{m}}_{x}$	Sample mean of $x[n]$ or $x(t)$
$\hat{\mathbf{\mu}}_{\mathbf{x}},\hat{\mathbf{m}}_{\mathbf{x}}$	Sample mean vector of $\mathbf{x}[n]$ or $\mathbf{x}(t)$
$\hat{r}_X(au), \hat{R}_X(au)$	Estimated autocorrelation function of the signal $x(t)$ or $x[n]$ [30]
$\hat{S}_x(f), \hat{S}_x(j\omega)$	Estimated power spectral density (PSD) of $x(t)$ in linear (f) or angular (ω) frequency

$\hat{\mathbf{R}}_{\mathbf{x}}$	Sample (auto)correlation matrix
$\hat{r}_{x,d}(\tau), \hat{R}_{x,d}(\tau)$	Estimated cross-correlation between
	x[n] and $d[n]$ or $x(t)$ and $d(t)$
$\hat{S}_{x,y}(f), \hat{S}_{x,y}(j\omega)$	Estimated cross PSD of $x(t)$ and $y(t)$
	in linear or angular (ω) frequency
$\hat{\mathbf{R}}_{\mathbf{x}\mathbf{y}}$	Sample cross-correlation matrix of
•	$\mathbf{R}_{\mathbf{x}\mathbf{y}}$
$\hat{c}_x(\tau), \hat{C}_x(\tau)$	Estimated autocovariance function of
	the signal $x(t)$ or $x[n]$
$\frac{\hat{\mathbf{C}}_{\mathbf{x}}, \hat{\mathbf{K}}_{\mathbf{x}}, \hat{\mathbf{\Sigma}}_{\mathbf{x}}}{\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)}$	Sample (auto)covariance matrix
$\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)$	Estimated cross-covariance function
	of the signal $x(t)$ or $x[n]$
$\hat{ ext{C}}_{ ext{xy}}, \hat{ ext{K}}_{ ext{xy}}, \hat{ extstyle }_{ ext{xy}}$	Sample cross-covariance matrix
Ĥ	Estimate of the Hessian matrix

4.3 Signals, (hyper)parameters, system performance, and criteria

N	Number of instances (or samples),
	i.e., $n \in \{1, 2,, N\}$
$N_{ m trn}$	Number of instances in the training
••••	set, i.e., $n \in \{1, 2,, N_{\text{trn}}\}$
$N_{ m tst}$	Number of instances in the test set,
	i.e., $n \in \{1, 2, \dots, N_{\text{tst}}\}$
$N_{ m val}$	Number of instances in the validation
	set, i.e., $n \in \{1, 2,, N_{\text{val}}\}$
N_e	Number of epochs
N_a	Number os attributes
K [9]	Number of classes (which is the num-
	ber of outputs in multiclass prob-
	lems). Use k to iterate over it
L	Number of layers. Use l to iterate
	over it
m_l [9], M_l , J [9]	Number of neurons at the l th layer.
	You might prefer J in the case of the
	single-layer perceptron (use j to it-
	erate over it). If you want to iter-
	ate through it, a sensible variation
	of Haykin notation is M_l , where m_l
	can be used as an iterator. m_0 is the
	length of the input vector without the
	bias.

$\mathbf{x}(n), \mathbf{x}_n$	Input signal (in \mathbb{R}^{N_a+1})
$x_0(n)$	Dummy input of the bais, which is
	usually ± 1 . ± 1 is preferred [9, 23].
$\varphi(\cdot)[23], h(\cdot)[9]$	Activation function
$\varphi(\cdot)[23], h(\cdot)[9]$ $\varphi'(v_{m_l}^{(l)}(n))[23], \frac{\partial y_{m_l}^{(l)}(n)}{\partial v_{m_l}^{(l)}(n)} [23]$	Partial derivative of the activation function with respect to $v_{m_l}^{(l)}(n)$ $(m_l$ neuron at l th layer)
$y_{m_l}^{(l)}(n), \varphi\left(v_{m_l}^{(l)}(n)\right)$	Output signal of the m_l th neuron at the l th layer
$\mathbf{y}^{(l)}(n)$ $\mathbf{y}(n), \mathbf{y}^{(L)}(n)$ $\mathbf{d}(n), \mathbf{d}_n$	Output signal of the l th layer
$\mathbf{y}(n),\mathbf{y}^{(L)}(n)$	Output of the neural network
$\mathbf{d}(n), \mathbf{d}_n$	Desired label (in case of supervised learning). For multiclass classification, one-hot encoding is usually used. For binary (scalar) classification, however antipodal encoding, i.e., $\{-1,1\}$ is more recommended [23].
$e_{m_l}(n)$	Error signal of the neuron m_l at the
	lth layer
$\mathbf{e}(n), \mathbf{d}(n) - \mathbf{y}(n)$	Error signal
	Parameters, coefficients, or synaptic weights vector in the <i>l</i> th layer. In the case of Single Layer Perceptrons or adaptive filters, the superscript is omitted
$w_{m_l,0}^{(l)}(n), b_{m_l}^{(l)}(n)$	Bias (the first term of the weight vector) of the <i>l</i> th layer
$\mathbf{W}(n), \begin{bmatrix} \mathbf{w}(1) & \mathbf{w}(2) & \cdots & \mathbf{w}(N) \end{bmatrix}^{T}$	Matrix of the synaptic weights
$\widetilde{\mathbf{W}}(n)$	Matrix of the synaptic weights, but without the bias
$v_{m_l}^{(l)}(n), \mathbf{w}_{m_l}^{(l)\top}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$	Induced local field or activation potential. At the first layer $\mathbf{y}_{m_0}^{(0)}(n) = \mathbf{x}(n)$ [9]
$\mathbf{v}^{(l)}(n), \mathbf{W}^{(l)}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$	Vector of the local fields at the l th layer
$\mathbf{w}^{\star}, \mathbf{w}_{o}, \mathbf{\theta}^{\star}, \mathbf{\theta}_{o}$	Optimum value of the parameters, coefficients, or synaptic weights vector (w * is also used [9] but it is not recommended as it may be confused with the conjugation operator)

$S(l)$ (n) $\partial \mathcal{E}(n)$	I seel and dient of the auth norman of
$\delta_{m_l}^{(l)}(n), rac{\partial \mathscr{E}(n)}{\partial v_{m_l}^{(l)}(n)}$	Local gradient of the m_l th neuron of
s (1)()	the lth layer.
$\boldsymbol{\delta}^{(l)}(n)$	Vector of the local gradients of all
TT (1) (2) (37)	neurons at the <i>l</i> th layer
$\mathbf{X}, \begin{bmatrix} \mathbf{x}(1) & \mathbf{x}(2) & \cdots & \mathbf{x}(N) \end{bmatrix}$	Data matrix
$\eta(n)$	Learning rate hyperparameter [9]
R	Bayes risk or average risk [9]
c_{ij}, C_{ij}	Misclassification cost in deciding in
	favor of class \mathscr{C}_i (represented in the
	subspace \mathcal{H}_i) when the \mathcal{C}_j is the true
	class (used in Bayes classifiers/detec-
	tors) [9, 12]
$rac{\mathscr{C}_k}{\mathscr{T}}$	kth class [9]
${\mathscr T}$	Training set, i.e., the set $\{\mathbf{x}(n), d(n)\}$
	that is used in the training phase [9]
\mathcal{H}_k	Subspace of the training vector be-
	longing to the class \mathscr{C}_k
\mathcal{H}	Complete space of the input vector,
	i.e., $\mathcal{H}_1 \cup \mathcal{H}_2 \cup \cdots \mathcal{H}_K$
\mathcal{X} [23]	Set of all vectors in the training,
	batch, validation, or test dataset that
	was misclassified
$\mathscr{E}(\mathbf{w}), \mathscr{E}(\mathbf{w}(n)), \mathscr{E}(n)$	Cost function or objective function
	(the way it is written depends on the
	purpose of the text)
$J(\mathbf{w}), J(\mathbf{w}(n)), J(n)$	Alternative to the cost function
$\Delta \mathscr{E}(\mathbf{w}(n)), \Delta \mathscr{E}(n), \mathscr{E}(\mathbf{w}(n+1))$ -	Cost function or objective function
$\mathscr{E}(\mathbf{w}(n))$	(the way it is written depends on the
	purpose of the text)
$\mathscr{E}_{\mathrm{av}}(\cdot)$	Error energy averaged over the train-
	ing sample or the empirical risk [9]
$\Lambda(\cdot)$	Likelihood function
$\Lambda_l(\cdot)$	Log-likelihood function
$\hat{ ho}_{x,y}$	Estimated Pearson correlation coeffi-
	cient between x and y
ho	Distance of the margin of separation
	between two classes (Support Vector
	Machine, SVM)
$g(\cdot)$	Discriminant function, i.e., $g(\mathbf{w}^*) = 0$

5 Linear Algebra

5.1 Common matrices and vectors

W, D	Diagonal matrix
P	Projection matrix; Permutation ma-
	trix
J	Jordan matrix
L	Lower matrix
U	Upper matrix
C	Cofactor matrix
$\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$	Cofactor matrix of A
S	Symmetric matrix
Q	Orthogonal matrix
$\overline{\mathbf{I}_N}$	$N \times N$ -dimensional identity matrix
$0_{M imes N}$	$M \times N$ -dimensional null matrix
0_N	N-dimensional null vector
$1_{M imes N}$	$M \times N$ -dimensional ones matrix
$\overline{1}_N$	N-dimensional ones vector
0	Null matrix, vector, or tensor (di-
	mensionality understood by context)
1	Ones matrix, vector, or tensor (di-
	mensionality understood by context)

5.2 Indexing

$x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$	Element in the position
1927	(i_1, i_2, \ldots, i_N) of the tensor \mathcal{X}
$\mathcal{X}^{(n)}$	<i>n</i> th tensor of a nontemporal sequence
$\mathbf{x}_n, \mathbf{x}_{:n}$	nth column of the matrix X
\mathbf{x}_{n} :	nth row of the matrix X
$\mathbf{x}_{i_1,,i_{n-1},:,i_{n+1},,i_N}$	Mode- n fiber of the tensor \mathcal{X}
$\mathbf{X}_{:,i_2,i_3}$	Column fiber (mode-1 fiber) of the
	thrid-order tensor \mathcal{X}
$\mathbf{x}_{i_1,:,i_3}$	Row fiber (mode-2 fiber) of the thrid-
	order tensor \mathcal{X}
$\mathbf{x}_{i_1,i_2,:}$	Tube fiber (mode-3 fiber) of the
	thrid-order tensor \mathcal{X}
$X_{i_1,:,:}$	Horizontal slice of the thrid-order
	tensor \mathcal{X}
$\mathbf{X}_{:,i_2,:}$	Lateral slices slice of the thrid-order
	tensor \mathcal{X}

$X_{i_3}, X_{:,:,i_3}$	Frontal slices slice of the thrid-order
	tensor \mathcal{X}

5.3 General operations

$\langle \mathbf{a}, \mathbf{b} angle , \mathbf{a}^ op \mathbf{b}, \mathbf{a} \cdot \mathbf{b}$	Inner or dot product
$\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{ op}$	Outer product
⊗	Kronecker product
\odot	Hadamard (or Schur) (elementwise)
	product
.⊙n	nth-order Hadamard power
$\odot \frac{1}{n}$	nth-order Hadamard root
\oslash	Hadamard (or Schur) (elementwise)
	division
♦	Khatri-Rao product
\otimes	Kronecker Product
$\overline{\times_n}$	<i>n</i> -mode product

5.4 Operations with matrices and tensors

$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	\mathbf{A}^{-1}	Inverse matrix
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\mathbf{A}^{+},\mathbf{A}^{\dagger}$	Moore-Penrose left pseudoinverse
$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\mathbf{A}^{T}, \mathbf{A}^{T}, \mathbf{A}^{t}, \mathbf{A}^{'}$ [36]	Transpose
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\mathbf{A}^{-\top}$	
$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$		$\left(\mathbf{A}^{-1}\right)^{\top} = \left(\mathbf{A}^{\top}\right)^{-1} \left[21, 32\right]$
	A *	Complex conjugate
	\mathbf{A}^{H}	Hermitian
	$\ \mathbf{A}\ _{\mathrm{F}}$	Frobenius norm
$\begin{array}{c} \operatorname{diag}\left(\mathbf{A}\right) & \operatorname{The\ elements\ in\ the\ diagonal\ of\ A} \\ \mathbf{E\left[A\right]} & \operatorname{Vectorization:\ stacks\ the\ columns\ of} \\ & \operatorname{the\ matrix\ A\ into\ a\ long\ column\ vector} \\ \mathbf{E}_{d\left[A\right]} & \operatorname{Extracts\ the\ diagonal\ elements\ of\ a\ square\ matrix\ and\ returns\ them\ in\ a\ column\ vector} \\ \mathbf{E}_{l\left[A\right]} & \operatorname{Extracts\ the\ elements\ strictly\ below\ the\ main\ diagonal\ of\ a\ square\ matrix\ in\ a\ column\ wise\ manner\ and\ returns} \end{array}$	$\ \mathbf{A}\ $	Matrix norm
	$ \mathbf{A} , \det(\mathbf{A})$	Determinant
the matrix \mathbf{A} into a long column vector $\mathbf{E}_{d}\left[\mathbf{A}\right] \qquad \qquad \text{Extracts the diagonal elements of a square matrix and returns them in a column vector}$ $\mathbf{E}_{l}\left[\mathbf{A}\right] \qquad \qquad \text{Extracts the elements strictly below the main diagonal of a square matrix in a column-wise manner and returns}$	$\operatorname{diag}\left(\mathbf{A}\right)$	The elements in the diagonal of A
	E [A]	Vectorization: stacks the columns of
$\mathbf{E}_{d}\left[\mathbf{A}\right]$ Extracts the diagonal elements of a square matrix and returns them in a column vector $\mathbf{E}_{l}\left[\mathbf{A}\right]$ Extracts the elements strictly below the main diagonal of a square matrix in a column-wise manner and returns		the matrix A into a long column vec-
$\begin{array}{c} \text{square matrix and returns them in a} \\ \text{column vector} \\ \hline \textbf{E}_{l}\left[\mathbf{A}\right] \\ \text{Extracts the elements strictly below} \\ \text{the main diagonal of a square matrix} \\ \text{in a column-wise manner and returns} \end{array}$		tor
${f column\ vector}$ ${f E}_l\left[{f A} ight]$ ${f Extracts\ the\ elements\ strictly\ below}$ ${f the\ main\ diagonal\ of\ a\ square\ matrix}$ ${f in\ a\ column\hbox{-wise\ manner\ and\ returns}}$	$\mathbf{E}_{d}\left[\mathbf{A}\right]$	Extracts the diagonal elements of a
$\mathbf{E}_{l}\left[\mathbf{A}\right]$ Extracts the elements strictly below the main diagonal of a square matrix in a column-wise manner and returns		square matrix and returns them in a
the main diagonal of a square matrix in a column-wise manner and returns		column vector
in a column-wise manner and returns	$\mathbf{E}_l\left[\mathbf{A} ight]$	Extracts the elements strictly below
		the main diagonal of a square matrix
them into a column vector		in a column-wise manner and returns
		them into a column vector

$\mathbf{E}_{u}\left[\mathbf{A}\right]$	Extracts the elements strictly above
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_b\left[\mathbf{A}\right]$	Block vectorization operator: stacks
	square block matrices of the input
	into a long block column matrix
unvec (A)	Reshapes a column vector into a ma-
	trix
$-\operatorname{tr}\{\mathbf{A}\}$	trace
$\mathbf{X}_{(n)}$	n -mode matricization of the tensor $\mathcal X$

5.5 Operations with vectors

$\ \mathbf{a}\ $	l_1 norm, 1-norm, or Manhattan norm
$\ \mathbf{a}\ , \ \mathbf{a}\ _2$	l_2 norm, 2-norm, or Euclidean norm
$\ \mathbf{a}\ _p$	l_p norm, p -norm, or Minkowski norm
$\ \mathbf{a}\ _{\infty}$	l_{∞} norm, ∞ -norm, or Chebyshev
	norm
diag (a)	Diagonalization: a square, diagonal
	matrix with entries given by the vec-
	tor \mathbf{a}

5.6 Decompositions

Λ	Eigenvalue matrix [38]
Q	Eigenvectors matrix; Orthogonal ma-
	trix of the QR decomposition[38]
R	Upper triangular matrix of the QR
	decomposition[38]
U	Left singular vectors[38]
$\frac{\mathrm{U}_r}{\Sigma}$	Left singular nondegenerated vectors
Σ	Singular value matrix
Σ_r	Singular value matrix with nonzero
	singular values in the main diagonal
Σ^+	Singular value matrix of the pseu-
	doinverse [38]
Σ_r^+	Singular value matrix of the pseu-
	doinverse with nonzero singular val-
	ues in the main diagonal
V	Right singular vectors [38]

$\overline{\mathrm{V}_r}$	Right singular nondegenerated vec-
	tors
eig (A)	Set of the eigenvalues of A [13, 29,
	32]
$\llbracket A, B, C, \ldots bracket$	CANDECOMP/PARAFAC (CP) de-
	composition of the tensor \mathcal{X} from the
	outer product of column vectors of \mathbf{A} ,
	B, C,
$-$ [[λ ; A, B, C,]]	· · · · · · · · · · · · · · · · · · ·
$\llbracket \pmb{\lambda}; \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots bracket$	В, С,
$\llbracket \lambda; A, B, C, \ldots bracket$	B, C, Normalized CANDE-
$\llbracket \lambda; A, B, C, \ldots bracket$	B, C, Normalized CANDE- COMP/PARAFAC (CP) decom-

5.7 Spaces and sets

5.7.1 Common spaces and sets

\mathbb{R}	Set of real numbers
$\overline{[a,b]}$	Closed interval of a real set from a to
	b
(a,b)	Opened interval of a real set from a
	to b
$\overline{[a,b),(a,b]}$	Half-opened intervals of a real set
	from a to b
C	Set of complex numbers
\mathbb{Z}	Set of integer number
$\overline{\{1,2,\ldots,n\}}$	Discrete set containing the integer el-
	ements $1, 2, \ldots, n$
$\mathbb{B} = \{0, 1\}$	Boolean set
Ø	Empty set
N	Set of natural numbers
$\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$	Real or complex space (field)
$\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$	$I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or
	complex) space
	Nonnegative real (or complex) space
	[10]
K ₊₊	Positive real (or complex) space, i.e.,
	$\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [10]$
U	Universe
2^A	Power set of A

5.7.2 Convex sets (or spaces)

\mathbb{S}^n [15], \mathcal{S}^n [10]	Conic set of the symmetric matrices
	in $\mathbb{R}^{n \times n}$
$\mathbb{S}^n_+,\mathcal{S}^n_+$	Conic set of the symmetric positive
	semidefinite matrices in $\mathbb{R}^{n \times n}$ [10]
$\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$	Conic set of the symmetric positive
	definite matrices in $\mathbb{R}^{n\times n}$, i.e., \mathbb{S}^n_{++} =
	$\mathbb{S}^n_+ \setminus \{0\} \ [10]$
\mathbb{H}^n	Set of all hermitian matrices in $\mathbb{C}^{n\times n}$
conv C	Convex hull
$\operatorname{aff} C$	Affune hull
$\overline{\mathcal{R}}$	Ray
\mathcal{H}	Hyperplane
$\mathcal{H}_+, \mathcal{H}$	Positive/negative halfspace
$B(\mathbf{x}_c, r)$	Euclidean ball with radium r and
	centered at \mathbf{x}_c
$\overline{\mathcal{E}}$	Ellipsoid
\overline{C}	Norm cone
K	Proper cone
<i>K</i> *	Dual cone
$\overline{\mathcal{P}}$	Polyhedra
S	Simplex
C_{α}	α -sublevel set
epi f	Epigraph of the function f
hypo f	Hypograph of the function f

5.7.3 Spaces from matrices or vectors

$\mathrm{span}\left\{\mathbf{a}_1,\mathbf{a}_2,\ldots,\mathbf{a}_n\right\}$	Vector space spanned by the argu-
	ment vectors [21]
$C(\mathbf{A})$, columnspace(\mathbf{A}), range(\mathbf{A}),	Columnspace, range or image, i.e.,
$\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$	the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$, where
	\mathbf{a}_i is the ith column vector of the ma-
	trix A [30, 38]
$C(\mathbf{A}^{H})$	Row space (also called left
	columnspace) [30, 38]
$\overline{\mathrm{N}\left(\mathbf{A}\right)}$, $\mathrm{nullspace}(\mathbf{A})$, $\mathrm{null}(\mathbf{A})$, $\mathrm{kernel}(\mathbf{A})$	Nullspace (or kernel space) [30, 38,
	39]
$N(\mathbf{A}^{H})$	Left nullspace
rank A	Rank, that is, $\dim(\operatorname{span}\{A\}) =$
	$\dim \left(\mathrm{C}\left(\mathbf{A}\right) \right) \left[30\right]$
nullity (A)	Nullity of \mathbf{A} , i.e., dim $(N(\mathbf{A}))$

5.8 Set operations

A + B	Set addition (Minkowski sum), i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$ [27]
A - B	Minkowski difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
$A \ominus B$	Pontryagin difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\}\ [27]$
$A \setminus B, A - B$	Set difference or set subtraction, i.e.,
	$A \setminus B = \{x x \in A \land x \notin B\}$ the set con-
	taining the elements of A that are not
	in B [35]
$A \cup B$	Set of union
$A \cap B$	Set of intersection
$A \times B$	Cartesian product
A^n	$A \times A \times \cdots \times A$
	n times
A^{\perp}	Orthogonal complement of A , e.g.,
	$N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [10]$
_a ⊥ b	${f a}$ is orthogonal to ${f b}$
a ∠ b	a is not orthogonal to b
$A \oplus B$	Direct sum, i.e., each $\mathbf{v} \in$
	$\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a
	unique representation of $\sum \mathbf{a}_i$ with
	$\mathbf{a}_i \in S_i$. That is, they expand to a
	space. Note that $\{S_i\}$ might not be
	orthogonal each other [21]
$A \stackrel{\frown}{\oplus} B$	Direct sum of two spaces that are or-
	thogonal and span a <i>n</i> -dimensional
	space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
	\mathbb{R}^n (this decomposition of \mathbb{R}^n is
	called the orthogonal decomposition
	induced by \mathbf{A}) [10]
\overline{A}, A^c	Complement set (given U)
#A, A	Cardinality of A
$a \in A$	a is element of A
$a \notin A$	a is not element of A

5.9 Inequalities

$\mathcal{X} \leq 0$	Nonnegative tensor
$\mathbf{a} \leq_K \mathbf{b}$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the conic subset K in
	the space $\mathbb{R}^n[10]$

$\mathbf{a} \prec_K \mathbf{b}$	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the interior of
	the conic subset K in the space $\mathbb{R}^n[10]$
$a \le b$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-
	thant conic subset, \mathbb{R}^n_+ , in the space
	\mathbb{R}^n .[10]
a < b	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-
	thant conic subset, \mathbb{R}^n_{++} , in the space
	$\mathbb{R}^{n}[10]$
$A \leq_K B$	Generalized inequality meaning that
	${f B}-{f A}$ belongs to the conic subset K
	in the space $\mathbb{S}^n[10]$
$A <_K B$	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the interior of
	the conic subset K in the space $\mathbb{S}^n[10]$
$A \leq B$	Generalized inequality meaning that
	$\mathbf{B} - \mathbf{A}$ belongs to the positive semidef-
	inite conic subset, \mathbb{S}_{+}^{n} , in the space
	$\mathbb{S}^{n}[10]$
A < B	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the positive or-
	thant conic subset, \mathbb{S}_{++}^n , in the space
	$\mathbb{S}^{n}[10]$
	• •

6 Communication systems

6.1 Common symbols

B	One-sided bandwidth of the trans-
	mitted signal, in Hz
\overline{W}	One-sided bandwidth of the trans-
	mitted signal, in rad/s
$\overline{x_i}$	Real or in-phase part of x
x_q	Imaginary or quadrature part of x
f_c, f_{RF}	Carrier frequency (in Hertz)
f_L	Carrier frequency in L-band (in
	Hertz)
f_{IF}	Intermediate frequency (in Hertz)
f_s	Sampling frequency or sampling rate
	(in Hertz)

T_s	Sampling time interval/duration/pe-
~	riod
R	Bit rate
T	Bit interval/duration/period
$\overline{T_c}$	Chip interval/duration/period
T_{sy}, T_{sym}	Symbol/signaling[33] interval/dura-
29. 29	tion/period
S_{RF}	Transmitted signal in RF
S_{FI}	Transmitted signal in FI
S, S_l	Lowpass (or baseband) equivalent
	signal or envelope complex of trans-
	mitted signal
r_{RF}	Received signal in RF
r_{FI}	Received signal in FI
r, r_l	Lowpass (or baseband) equivalent
	signal or envelope complex of re-
	ceived signal
ϕ	Signal phase
ϕ_0	Initial phase
η_{RF}, w_{RF}	Noise in RF
η_{FI}, w_{FI}	Noise in FI
η , w	Noise in baseband
τ	Timing delay
$\Delta \tau$	Timing error (delay - estimated)
φ	Phase offset
$\Delta \varphi$	Phase error (offset - estimated)
f_d	Linear Doppler frequency
Δf_d	Frequency error (Doppler frequency -
	estimated)
ν	Angular Doppler frequency
$\Delta \nu$	Frequency error (Doppler frequency -
	estimated)
γ, A	Transmitted signal amplitude
γ_0, A_0	Combined effect of the path loss and
	antenna gain

6.2 Fading multipath channels

$t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda \ [33]$	Support temporal of the signal. λ
	is obtained after taking the Fourier
	transform on t .

$\tau \stackrel{\mathcal{F}}{\leftrightarrow} f [33] \qquad \qquad \text{Second support temporal of the signal } (c(t) \text{ varies with with the input at the time } \tau). \ f \text{ is obtained after taking the Fourier transform on } \tau.$ $c(t,\tau) [33] \qquad \qquad \text{Complex envelope of the channel response at the time } t \text{ due to an impulse applied at the } t - \tau$ $C(f,t) [33] \qquad \qquad \text{Transfer function of } c(t,\tau) \text{ in } \tau$ $\alpha(t,\tau) [33] \qquad \qquad \text{Attenuation of } c(t,\tau), \text{ i.e., } c(t,\tau) = \alpha(t,\tau)e^{xf_c\tau}$ $R_c(\tau_1,\tau_2,\Delta t) [33] \qquad \qquad \text{Autocorrelation function of } c(t,\tau), \text{ i.e., } R_c(\tau_1,\tau_2,\Delta t) = E[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)]$ $R_c(\tau,\Delta t) [33] \qquad \qquad \text{Autocorrelation function of } c(t,\tau) \text{ assuming uncorrelated scattering}$ $R_c(\tau), R_c(\tau,\Delta t) _{\Delta t=0} [33] \qquad \qquad \text{Multipath intensity profile or delay power spectrum}$ $R_C(\Delta f,\Delta t), R_C(f_1,f_2;\Delta t), \qquad \text{Spaced-frequency, spaced-time correlation function } (\Delta f = f_2 - f_1)$ $\mathcal{F}_{\tau} \{R_c(\tau,\Delta t)\} [20] \qquad \qquad \text{Spaced-frequency correlation function}$ $(\Delta f)_c \qquad \qquad \text{Coherence bandwidth of } c(t), \text{ that is, the frequency interval in which } R_C(\Delta f), R_C(\Delta f,\Delta t) _{\Delta t=0} \qquad \text{Spaced-time correlation function}$ $(\Delta f)_c \qquad \qquad \text{Coherence bandwidth of } c(t), \text{ that is, the time interval in which } R_c(\Delta f), \text{ is nonzero } [33]$ $R_C(\Delta f), R_C(\Delta f,\Delta t) _{\Delta f=0} \qquad \text{Spaced-time correlation function } [33]$ $S_C(\lambda) \ [33], \mathcal{F}_{R_C}(\Delta f) \ [20] \qquad \text{Doppler power spectrum}$ $(\Delta t)_c \qquad \qquad \text{Coherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero } [33]$ $B_m \qquad \qquad \text{Multipath spread of the channel, that is, the frequency interval in which } S_c(\lambda) \text{ is nonzero } (B_d \approx 1/(\Delta t)_c) \ [33]$ $S_C(\tau,\lambda) \ [33], \mathcal{F}_{A_f,\Delta t} \{R_C(\Delta f,\Delta t)\} \ \text{Scattering function}$		
$ \begin{array}{c} \text{nal } (c(t) \text{ varies with with the input} \\ \text{at the time } \tau). f \text{ is obtained after} \\ \text{taking the Fourier transform on } \tau. \\ \hline \\ c(t,\tau) \ [33] \\ \hline \\ c(t,\tau) \ [33] \\ \hline \\ a(t,\tau) \ [34] \\ \hline \\ a(t,\tau) \ [35] \\ \hline $	$\tau \stackrel{\mathcal{F}}{\leftrightarrow} f$ [33]	Second support temporal of the sig-
$c(t,\tau) \ [33] \qquad \text{complex envelope of the channel response at the time t due to an impulse applied at the $t-\tau$ \frac{C(f,t) \ [33]}{a(t,\tau) \ [33]} \qquad \text{Transfer function of $c(t,\tau)$ in τ} \\ a(t,\tau) \ [33] \qquad \text{Attenuation of $c(t,\tau)$ in τ} \\ Autocorrelation function of $c(t,\tau)$ is a due to an impulse applied at the $t-\tau$ \frac{c(t,\tau)e^{s\tau}f^{c\tau}}{a(t,\tau)e^{s\tau}f^{c\tau}} \qquad \text{Autocorrelation function of $c(t,\tau)$, i.e., $c(t,\tau) = $a(t,\tau)e^{s\tau}f^{c\tau}$} \\ Autocorrelation function of $c(t,\tau)$, i.e., $R_c(\tau_1,\tau_2,\Delta t) = E\left[e^*(t,\tau_1),e^*(t+\Delta t,\tau_2)\right]$} \\ R_c(\tau,\Delta t) \ [33] \qquad \text{Autocorrelation function of $c(t,\tau)$ assuming uncorrelated scattering}$} \\ R_c(\tau), R_c(\tau,\Delta t) \ [33] \qquad \text{Autocorrelation function of $c(t,\tau)$ assuming uncorrelated scattering}$} \\ R_c(\Delta f,\Delta t), R_c(f_1,f_2;\Delta t), \qquad Spaced-frequency, spaced-time correlation function (\Delta f = f_2 - f_1)$} \\ F_{\tau} \{R_c(\tau,\Delta t)\} \ [20] \qquad \text{Spaced-frequency correlation function}$} \\ R_c(\Delta f), R_c(\Delta f,\Delta t) _{\Delta t=0} \qquad [33], \qquad Spaced-frequency correlation function function (\Delta f)_c \qquad Coherence bandwidth of $c(t)$, that is, the frequency interval in which $R_c(\Delta f)$ is nonzero [33]} \\ T_m \qquad Multipath spread of the channel, that is, the time interval in which $R_c(\tau)$ is nonzero (T_m \approx 1/(\Delta f)_c) [33]} \\ R_c(\Delta t), R_c(\Delta f,\Delta t) _{\Delta f=0} \qquad Spaced-time correlation function [33]} \\ S_c(\lambda) \ [33], \mathcal{F}\{R_c(\Delta t)\} \ [20] \qquad Doppler power spectrum \\ Coherence time of $c(t)$, that is, the time interval in which $R_c(\Delta t)$ is nonzero [33]} \\ B_m \qquad Multipath spread of the channel, that is, the frequency interval in which $R_c(\Delta t)$ is nonzero [33]} \\ S_c(\lambda) \ [33], \mathcal{F}_{\Delta f,\Delta t} \{R_c(\Delta f,\Delta t)\} \qquad Scattering function (\Delta f)_c \approx 1/(\Delta t)_c = 1/(\Delta f)_c $

7 Discrete mathematics

7.1 Quantifiers, inferences

A	For all (universal quantifier) [22]
3	There exists (existential quantifier)
	[22]
∄	There does not exist [22]
3!	There exists an unique [22]
\exists_n	There exists exactly n [35]
∄ ∃! ∃ _n ∈ ∉	Belongs to [22]
∉	Does not belong to [22]
::	Because [22]
ļ,:	Such that, sometimes that parenthe-
	ses is used [22]
$\overline{}$,,(·)	Used to separate the quantifier with
	restricted domain from its scope, e.g.,
	$\forall x < 0 (x^2 > 0) \text{ or } \forall x < 0, x^2 > 0$
	[22]
:	Therefore [22]

7.2 Propositional Logic

$\neg a$	Logical negation of a [35]
$a \wedge b$	Conjunction (logical AND) operator
	between a and $b[35]$
$a \lor b$	Disjunction (logical OR) operator be-
	tween a and $b[35]$
$a \oplus b$	Exclusive OR (logical XOR) operator
	between a and $b[35]$
$a \rightarrow b$	Implication (or conditional) state-
	ment[35]
$a \leftrightarrow b$	Bi-implication (or biconditional)
	statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$
	[35]
$a \equiv b, a \iff b, a \Leftrightarrow b$	Logical equivalence, i.e., $a \leftrightarrow b$ is a
	tautology[35]

7.3 Operations

Absolute value of a
Base-10 logarithm or decimal loga-
rithm
Natual logarithm
Real part of x
Imaginary part of x
Phase (complex argument)

$x \mod y$	Remainder, i.e., $x - y \lfloor x/y \rfloor$, for $y \neq 0$
x div y	Quotient [35]
$x \equiv y \pmod{m}$	Congruent, i.e., $m \setminus (x - y)$ [35]
$\operatorname{frac}(x)$	Fractional part, i.e., $x \mod 1$ [22]
$a \backslash b, a \mid b$	b is a positive integer multiple of a ,
	i.e., $\exists n \in \mathbb{Z}_{++} \mid b = na \ [22, 35]$
$a \not \setminus b, a \not \mid b$	b is not a positive integer multiple of
	$a, \text{ i.e., } \not\equiv n \in \mathbb{Z}_{++} \mid b = na \ [22, 35]$
[·]	Ceiling operation [22]
[.]	Floor operation [22]

8 Vector Calculus

$\nabla f[37], \operatorname{grad} f[34]$	Vector differential operator (Nabla
	symbol), i.e., ∇f is the gradient of
	the scalar-valued function f , i.e., f :
	$\mathbb{R}^n o \mathbb{R}$
t,(u,v)	Parametric variables commonly used,
	t for one variable, (u, v) for two vari-
	ables[37]
$\frac{1(x, y, z) [34], \mathbf{r}(x, y, z) [37], x\hat{\mathbf{i}} + y\hat{\mathbf{j}} + z\hat{\mathbf{k}}}{\mathbf{l}(t)}$	Vector position, i.e., (x, y, z) .
$\overline{1(t)}$	Vector position parametrized by t ,
.,	i.e., $(x(t), y(t), z(t))$ [34, 37]
l'(t), dl/dt	First derivative of $\mathbf{l}(t)$, i.e., the
	tangent vector of the curve
	(x(t), y(t), z(t)) [37]
$\mathbf{u}(t)[28] \mathbf{T}(t)[37], dl(t)[34]$	Tangent unit vector of $\mathbf{l}(t)$, i.e.,
	$\mathbf{u}(t) = \mathbf{l}'(t)/ \mathbf{l}'(t) $
$\mathbf{n}(t), \left(\frac{y'(t)}{ l'(t) }, -\frac{x'(t)}{ l'(t) }\right)$	Normal vector of $\mathbf{l}(t)$, i.e.,
$\langle r(t) r(t) \rangle$	$\mathbf{n}(t) \perp \mathbf{T}(t)[37]$
\overline{C}	Contour that traveled by $l(t)$, for $a \le 1$
	$t \leq b$ [37]
L, L(C)	Total length of the contour C
	(which can be defined the vector
	l, parametrized by t), i.e., $L_C =$
	$\int_a^b \mathbf{l}'(t) \mathrm{d}t [37]$
s(t)	Length of the arc, which can be de-
•	fined by the vector \mathbf{l} and t , that is,
	$s(t) = \int_{a}^{t} \mathbf{l}'(u) \mathrm{d}u \ (s(b) = L)[37]$
ds	Differential operator of the length of
	the contour C , i.e., $ds = \mathbf{l}'(t) dt$ [37]

$\int_C f(\mathbf{l}) \mathrm{d}s, \int_a^b f(\mathbf{l}(t)) \mathbf{l}'(t) \mathrm{d}t$ $\theta [34]$	Line integral of the function $f: \mathbb{R}^n \to \mathbb{R}$ along the contour C . In the context of integrals in the complex plane, it is also called "contour integral" Angle between the contour C and the vector field \mathbf{F}
$ \frac{\int_{C} \mathbf{F} \cdot d\mathbf{l}, \ \int_{a}^{b} \mathbf{F}(\mathbf{l}(t)) \cdot \mathbf{l}'(t) dt}{\int_{C} \mathbf{F} \cdot \mathbf{u} ds, \ \int_{C} \mathbf{F} \cos \theta ds} [34]} $ $ \frac{\int_{C} \mathbf{F} \cdot d\mathbf{u} [34]}{\int_{C} \mathbf{F} \cdot d\mathbf{u} [34]} $	Line integral of vector field ${\bf F}$ along the contour C
	In the field of electromagnetics, it is common to apply the line integral between the vector field \mathbf{F} and the unit vector $\mathbf{u}(t)$. Therefore, this line integral may appear as well
$\int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F}, \int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{l}$	Alternative notation to the line integral, where the parametric variable t goes from a to b , making r goes from $l(a) = a$ to $l(b) = b$ [8]
\oint_C, \oint_C	Line integral along the closed contour C . The arrow indicates the contour integral orientation, which is counterclockwise, by default. In the context of integrals in the complex plane, it is also called "closed contour integral".
	Surface integral over the closed surface S
l(u, v)	Vector position $(x(u, v), y(u, v), z(u, v))$ parametrized by (u, v)
l_u	$(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)$
\mathbf{l}_{v}	$(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$
$\mathrm{d}A$	Differential operator of a 2D area (denoted by D or R) in the \mathbb{R}^2 domain. This differential operator can be solved in different ways (rectangular, polar, cylindric, etc) [37]
D,R	Integration domain in which dA is integrated, i.e., $\iint_D f dA$. R is preferred when the integration domain is a rectangle, while D is used when it has nonrectangular shape [37]
S	Smooth surface $S \subset \mathbb{R}^3$, i.e., a 2D area in a 3D space

10 111 1 14	Diff. it is a constant.
$\mathrm{d}S$, $ \mathbf{l}_u \times \mathbf{l}_v \mathrm{d}A$	Differential operator of a 2D area in
	a 3D domain (an surface). Note that
	$dS = \mathbf{l}_u \times \mathbf{l}_v dA$ should be accompa-
	nied with the change of the integra-
00 00	tion interval(from S to D)
$A(S), \iint_S dS, \iint_D \mathbf{l}_u \times \mathbf{l}_v dA$	Area of the surface S parametrized by
	(u, v), in which dA is the area defined
	in the D domain (which is form by
	the u -by- v graph)
$\mathrm{d}V$	Differential operator of a shape vol-
	ume (denoted by E) in \mathbb{R}^3 domain,
	i.e., $\iiint_E dV = V$
E	Integration domain in which dV is in-
	tegrated, i.e., $\iiint_F f dV$ [37]
$V, \iint_D f \mathrm{d}A, \iiint_F f \mathrm{d}V$	Volume of the function f over the re-
JJD^* JJE^*	gions D (in the case of double inte-
	grals) or E (in the case of triple inte-
	grals)
$\iint_{S} f dS$, $\iint_{D} f \mathbf{l}_{u} \times \mathbf{l}_{v} dA$	Surface integral over S
$\frac{\iint_{S} f \mathrm{d}S, \iint_{D} f \mathbf{l}_{u} \times \mathbf{l}_{v} \mathrm{d}A}{\mathbf{n}(u, v), \frac{\mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v)}{ \mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v) }}$	Normal vector of of the smooth sur-
$= \langle v, v, v \rangle \mathbf{I}_{u}(u, v) \times \mathbf{I}_{v}(u, v) $	face S
$\iint_{\mathbf{S}} \mathbf{F} \cdot \mathbf{n} \mathrm{d}S, \iint_{\mathbf{S}} \mathbf{F} \cdot \mathrm{d}\mathbf{S},$	Flux integral of vector field F through
**************************************	the smooth surface S ($\mathbf{n} dS \triangleq d\mathbf{S}$)
$ \frac{\iint_D \mathbf{F} \cdot (\mathbf{l}_u \times \mathbf{l}_v) \mathrm{d}A}{\oint_S \mathbf{F} \cdot \mathbf{n} \mathrm{d}S, \oint_S \mathbf{F} \cdot \mathbf{d}S,} $	Flux integral of vector field F through
$\iint_{D} \mathbf{F} \cdot (\mathbf{l}_{u} \times \mathbf{l}_{v}) \mathrm{d}A$	the smooth and closed surface S
JJD^{2} (-u $\times 2V$) and	$(\mathbf{n} dS \triangleq d\mathbf{S})$
$\nabla \times \mathbf{F}$, curl \mathbf{F}	Curl (rotacional) of the vector field F
$\nabla \cdot \mathbf{F}, \operatorname{div} \mathbf{F}$	Divercence of the vector field ${f F}$
$\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,$	Scalar Laplacian operator (per-
$\partial^2 f/\partial x^2 + \partial^2 f/\partial y^2 + \partial^2 f/\partial z^2$	formed on a scalar-valued function
	$f: \mathbb{R}^n \to \mathbb{R}$
$\nabla^2 \mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla (\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$	Vector Laplacian operator (per-
$(\partial^2 \mathbf{F}/\partial x^2, \partial^2 \mathbf{F}/\partial y^2, \partial^2 \mathbf{F}/\partial z^2)$	formed on a vector field, i.e., a
	vector-valued function, $\mathbf{F}: \mathbb{R}^n \to$
	\mathbb{R}^n). ∇^2 denotes the scalar (vector)
	Laplacian if the function is scalar-
	valued (vector-valued). The notation
	Δ must be avoided as it is overused
	in many contexts

9 Electromagnetic waves

Φ	Electric flux (scalar) (in V m)
H	Magnetic field vector (in A/m)
В	Magnetic flux density vector (in
	$Wb/m^2 = T$)
$\Phi[14]$	Magnetic flux
$q_{\mathrm{f}},q_{\mathrm{free}},Q_{\mathrm{free}}[18]$	Free electric charge (in C)
$q_{ m b},q_{ m bound},Q_{ m bound}[18]$	Bound electric charge (in C)
q , $q_{\rm f}$ + $q_{\rm b}$	Electric charge (in C)
$\rho_{\mathrm{f}}[1], \rho_{\mathrm{free}}$ [18]	Free electric charge density
$\rho_{\rm b}[1], \rho_{\rm bound}$ [18]	Electric charge density
$\rho, \rho_{\mathrm{f}} + \rho_{\mathrm{b}}$	Electric charge density (it can be
	in C/m^3 , C/m^2 or C/m depending
	whether it is a volume, surface, or
	line shapes)
f[34], F[2]	Electrostatic force (Coulomb force),
	$(\text{in kg m/s}^2).$
arepsilon	Electric permittivity (in F/m). If the
	medium is isotropic, it is a scalar. If
	it is anisotropic, it is a tensor. [34]
$arepsilon_r$	Relative electric permittivity or di-
	electric constant (in F/m) [34]
$arepsilon_0$	Electric permittivity in vacuum,
	$8.854 \times 10^{-12} \mathrm{F/m}$ [34]
E	Electric field vector (in V/m)
<u>σ</u>	Electric conductivity (in S/m)
J	Electric current density vector (in
T [14]	A/m ²)
$\mathbf{J}_m[14]$	Magnetization current density vector
D	$\frac{\text{(in A/m}^2)}{Filsting a local state of the state $
D	Electric flux density, electric dis-
	placement, or electric induction vector (in C/m^2)
\overline{U}	Electric potential energy
$\frac{V}{V[3, 14], \Phi[34]}$	Electric potential energy Electric potential (in voltage, V).
$V[3, 14], \Psi[34]$	However, keep in mind that there is
	a subtle difference between both def-
	initions [4]
$\Phi_E[19], \oint_{\mathbf{S}} \mathbf{E} \mathrm{d}\mathbf{S}$	Electric flux (in V m)
$\frac{\Phi_D[18], \mathcal{H}_S \mathbf{D} dS}{\Phi_D[18], \mathcal{\Psi}[34], \oint_S \mathbf{D} dS}$	Electric flux (D -field flux)
$\frac{\mathbf{P}_{[10]}, \mathbf{P}_{[01]}, \mathcal{H}_{S} \mathbf{P}_{S}}{\mathbf{P}}$	Electric polarization of the material
-	(in C/m^2)
Va	Electric susceptibility (for linear and
Xe	isotropic materials)
μ	Magnetic permeability
<u></u>	Tragnotte Permeability

10 Generic mathematical symbols

	Q.E.D.
	Equal by definition
:=, ←	Assignment [35]
<i>≠</i>	Not equal
∞	Infinity
j	$\sqrt{-1}$

11 Abbreviations

PS: Only names of techniques and algorithms or usual abbreviations are considered.

wrt.	With respect to
st.	Subject to
iff.	If and only if
EVD	Eigenvalue decomposition, or eigen-
	decomposition [30]
SVD	Singular value decomposition
CP	CANDECOMP/PARAFAC
SGD	Stochastic gradient descent
SVM	Support vector machine
BPNN	Backpropagation neural network [26]
RBF	Radial basis function
