#### 1 Font notation

$a, b, c, \ldots, A, B, C, \ldots$	Scalars
$a, b, c, \dots$	Vectors
$A, B, C, \dots$	Matrices
$\mathcal{A}, \mathcal{B}, \mathcal{C}, \dots$	Tensors
$A, B, C, \ldots, A, B, C, \ldots, A, B, C, \ldots$	Sets

## 2 Signals and functions

#### 2.1 Time indexing

x(t)	Continuous-time $t$
$x[n],x[k],x[m],x[i],\ldots$	Discrete-time $n, k, m, i, \ldots$ (parenthe-
$x_n, x_k, x_m, x_i, \dots$	sis should be adopted only if there
$x(n), x(k), x(m), x(i), \ldots$	are no continuous-time signals in the
	context to avoid ambiguity)
$x[((n-m))_N][25], x((n-m))_N[19]$	Circular shift in $m$ samples within a
	N-samples window

#### 2.2 Common signals

$\delta(t)$	Delta function
$\delta[n], \delta_{i,j}$	Kronecker function $(n = i - j)$
h(t), h[n]	Impulse response (continuous and
	discrete time)
$\tilde{x}[n], \tilde{x}(t)$	Periodic discrete- or continuous-time
	signal
$\hat{x}[n], \hat{x}(t)$	Estimate of $x[n]$ or $x(t)$
$\dot{x}[m]$	Interpolation of $x[n]$

#### 2.3 Common functions

$\mathcal{O}(\cdot), O(\cdot)$	Big-O notation
$\Gamma(\cdot)$	Gamma function
$Q(\cdot)$	Quantization function
$\operatorname{sgn}(\cdot)$	Signum function
$\tanh(\cdot)$	Hyperbolic tangent function
$I_{\alpha}(\cdot)$	Modified Bessel function of the first
	kind and order $\alpha$

	_	
$\binom{n}{n}$		Binomial coefficient
1 1	. 1	Dinomiai coemcient
( K	' ]	

## 2.4 Operations and symbols

$f:A\to B$	A function $f$ whose domain is $A$ and codomain is $B$
$\mathbf{f}:A\to\mathbb{R}^n$	A vector-valued function $\mathbf{f}$ , i.e., $n \geq 2$
$f^n, x^n(t), x^n[k]$	nth power of the function $f$ , $x[n]$ or
	x(t)
$f^{(n)}, x^{(n)}(t)$	nth derivative of the function $f$ or
	x(t)
$f', f^{(1)}, x'(t)$	1th derivative of the function $f$ or
	x(t)
$f'', f^{(2)}, x''(t)$	2th derivative of the function $f$ or
	x(t)
$\underset{x \in A}{\operatorname{arg} \max} f(x)$	Value of $x$ that minimizes $x$
$ \frac{x \in \mathcal{A}}{\underset{x \in \mathcal{A}}{\operatorname{arg  min}} f(x)} $	Value of $x$ that minimizes $x$
$\frac{f(\mathbf{x}) = \inf_{\mathbf{x} \in \mathcal{A}} f(\mathbf{x})}{f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})}$	Infimum, i.e., $f(\mathbf{x}) =$
$\mathbf{y} \in \mathcal{A}$	$\min \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g) \},$
	which is the greatest lower bound of
	this set [6]
$f(\mathbf{x}) = \sup g(\mathbf{x}, \mathbf{y})$	Supremum, i.e., $f(\mathbf{x}) =$
$\mathbf{y} \in \mathcal{A}$	$\max \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\},\$
	which is the least upper bound of
	this set [6]
$f \circ g$	Composition of the functions $f$ and
	g
*	Convolution (discrete or continuous)
<b>●</b> [12], N [25]	Circular convolution

#### 2.5 Transformations

$W_N$	Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [19]
$\overline{\mathcal{F}\left\{\cdot\right\}}$	Fourier transform
$\mathcal{L}\left\{ \cdot \right\}$	Laplace transform
$\overline{\mathcal{Z}\left\{\cdot\right\}}$	z-transform
$\hat{x}(t), \hat{x}[n]$	Hilbert transform of $x(t)$ or $x[n]$
X(s)	Laplace transform of $x(t)$

X(f)	Fourier transform (FT) (in linear fre-
	quency, Hz) of $x(t)$
$X(j\omega)$	Fourier transform (FT) (in angular
	frequency, rad/sec) of $x(t)$
$X(e^{j\omega})$	Discrete-time Fourier transform
	(DTFT) of $x[n]$
$X[k], X(k), X_k$	Discrete Fourier transform (DFT) or
	fast Fourier transform (FFT) of $x[n]$ ,
	or even the Fourier series (FS) of the
	periodic signal $x(t)$
$\tilde{X}[k], \tilde{X}(k), \tilde{X}_k$	Discrete Fourier series (DFS) of $\tilde{x}[n]$
X(z)	z-transform of $x[n]$

## 3 Probability, statistics, and stochastic processes

#### 3.1 Operators and symbols

$\mathrm{E}\left[\cdot\right],\mathbf{E}\left[\cdot\right]\left[24\right],E\left[\cdot ight],\mathbb{E}\left[\cdot ight]$	Statistical expectation operator [11]
$E_u[\cdot], E_u[\cdot][24], E_u[\cdot], \mathbb{E}_u[\cdot]$	Statistical expectation operator with
	respect to $u$
$\overline{\langle \cdot \rangle}$	Ensemble average
$\operatorname{var}\left[\cdot\right], \operatorname{VAR}\left[\cdot\right]$	Variance operator [5, 18, 23, 27]
$\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$	Variance operator with respect to $u$
$cov[\cdot], COV[\cdot]$	Covariance operator [5]
$\operatorname{cov}_{u}\left[\cdot\right], \operatorname{COV}_{u}\left[\cdot\right]$	Covariance operator with respect to
	u
$\mu_x$	Mean of the random variable $x$
$\mu_{x}, m_{x}$	Mean vector of the random variable
	x [7]
$\mu_n$	nth-order moment of a random vari-
	able
$\frac{\sigma_{x}^{2}, \kappa_{2}}{\mathcal{K}_{x}, \mu_{4}}$	Variance of the random variable $x$
$\mathcal{K}_x, \mu_4$	Kurtosis (4th-order moment) of the
	random variable $x$
$\kappa_n$	nth-order cumulant of a random vari-
	able
$\rho_{x,y}$	Pearson correlation coefficient be-
	tween $x$ and $y$
$a \sim P$	Random variable $a$ with distribution
	P
$\mathcal{R}$	Rayleigh's quotient

#### 3.2 Stochastic processes

$r_X( au), R_X( au)$	Autocorrelation function of the signal
	x(t) or $x[n]$ [24]
$S_X(f), S_X(j\omega)$	Power spectral density (PSD) of $x(t)$
	in linear $(f)$ or angular $(\omega)$ frequency
$S_{x,y}(f), S_{x,y}(j\omega)$	Cross PSD of $x(t)$ and $y(t)$ in linear
	or angular $(\omega)$ frequency
R <sub>x</sub>	(Auto)correlation matrix of $\mathbf{x}(n)$
$r_{x,d}(\tau), R_{x,d}(\tau)$	Cross-correlation between $x[n]$ and
	d[n] or $x(t)$ and $d(t)$ [24]
$\overline{R}_{xy}$	Cross-correlation matrix of $\mathbf{x}(n)$ and
	$\mathbf{y}(n)$
$\mathbf{p}_{\mathbf{x}d}$	Cross-correlation vector
	between $\mathbf{x}(n)$ and $d(n)$
	[dinizAdaptiveFiltering1997]
$c_x(\tau), C_x(\tau)$	Autocovariance function of the signal
	x(t) or $x[n]$ [24]
$\mathbf{C}_{\mathbf{x}}, \mathbf{K}_{\mathbf{x}}, \mathbf{\Sigma}_{\mathbf{x}}, \operatorname{cov}\left[\mathbf{x}\right]$	(Auto)covariance matrix of <b>x</b> [5, 18,
	23, 27, 34]
$c_{xy}(\tau), C_{xy}(\tau)$	Cross-covariance function of the sig-
	$\operatorname{nal} x(t) \text{ or } x[n] \text{ [24]}$
$\mathbf{C}_{\mathrm{xy}}, \mathbf{K}_{\mathrm{xy}}, \mathbf{\Sigma}_{\mathrm{xy}}$	Cross-covariance matrix of $\mathbf{x}$ and $\mathbf{y}$

#### 3.3 Functions

$Q(\cdot)$	Q-function, i.e., $P[\mathcal{N}(0,1) > x]$ [27]
$\operatorname{erf}(\cdot)$	Error function [27]
$\operatorname{erfc}(\cdot)$	Complementary error function i.e.,
	$\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x)$ [27]
P[A]	Probability of the event or set $A$ [23]
$p(\cdot), f(\cdot)$	Probability density function (PDF)
	or probability mass function (PMF)
	[23]
$\frac{p(x \mid A)}{F(\cdot)}$	Conditional PDF or PMF [23]
$F(\cdot)$	Cumulative distribution function
	(CDF)
$\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$	First characteristic function (CF) of
	x [27, 33]
$M_X(t), \Phi_X(-jt), E[e^{tX}]$	Moment-generating function (MGF)
	of $x [27, 33]$
$\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$	Second characteristic function
$K_x(t), \ln E\left[e^{tx}\right], \ln M_x(t)$	Cumulant-generating function
	(CGF) of $x$ [18]

#### 3.4 Distributions

$\mathcal{N}(\mu, \sigma^2)$	Gaussian distribution of a random variable with mean $\mu$ and variance $\sigma^2$
$\mathcal{CN}(\mu, \sigma^2)$	Complex Gaussian distribution of a random variable with mean $\mu$ and variance $\sigma^2$
$\mathcal{N}(\pmb{\mu},\pmb{\Sigma})$	Gaussian distribution of a vector random variable with mean $\mu$ and covariance matrix $\Sigma$
$\mathcal{CN}(oldsymbol{\mu}, oldsymbol{\Sigma})$	Complex Gaussian distribution of a vector random variable with mean $\mu$ and covariance matrix $\Sigma$
$\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$	Uniform distribution from $a$ to $b$
$\chi^2(n), \chi_n^2$	Chi-square distribution with $n$ degree of freedom (assuming that the Gaussians are $\mathcal{N}(0,1)$ )
$\operatorname{Exp}(\lambda)$	Exponential distribution with rate parameter $\lambda$
$\Gamma(\alpha, \beta)$	Gamma distribution with shape parameter $\alpha$ and rate parameter $\beta$
$\Gamma(\alpha, \theta)$	Gamma distribution with shape parameter $\alpha$ and scale parameter $\theta = 1/\beta$
$\operatorname{Nakagami}(m,\Omega)$	Nakagami-m distribution with shape parameter or fading figure $m$ and spread, scale, or shape parameter $\Omega$
$\operatorname{Rayleigh}(\sigma)$	Rayleigh distribution with scale parameter $\sigma$
$\operatorname{Rayleigh}(\Omega)$	Rayleigh distribution with the second moment $\Omega = E[x^2] = 2\sigma^2$
$\mathrm{Rice}(s,\sigma)$	Rice distribution with noncentrality parameter $s$ and $\sigma$ . $s^2$ represent the specular component power
$\overline{\mathrm{Rice}(A,K)}$	Rice distribution with Rice factor $K = s^2/2\sigma^2$ and scale parameter $A = s^2 + 2\sigma^2$

# 4 Machine learning, optimization theory, and statistical signal processing

#### 4.1 Matrix Calculus

$\mathbf{g}, \nabla f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector, "used" in the steepest (or gradient) descent method
$\mathbf{g}_{\mathbf{x}}, \nabla_{\mathbf{w}} f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector with respect $\mathbf{w}$ [5]
$ \frac{\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}}{\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f [17]} $	Jacobian matrix.
$\mathbf{H}, \frac{\partial^2 f}{\partial \mathbf{w}^2}, \nabla^2 f$ [17]	Hessian matrix. The notation $\nabla^2$ is sometimes used in Matrix Calculus to denote the second-order vector derivative. However, it must be avoided since, in Vector Calculus, $\nabla^2$ also denotes the Laplacian operator which in turn may be scalar or vector Laplacian operator depending on whether $f$ is scalar- or vector-valued, respectively. Some discussion about can be found in [1–3]

#### 4.2 Estimated terms

$\mathbf{g}$ (or $\hat{\mathbf{g}}$ if the gradient vector is $\mathbf{g})$	Stochastic gradient descent (SGD),
	i.e., instantaneous approximation of
	gradient descent vector
$\hat{x}(t)$ or $\hat{x}[n]$	Estimate of $x(t)$ or $x[n]$
$\hat{\boldsymbol{\mu}}_{x},\hat{\mathbf{m}}_{x}$	Sample mean of $x[n]$ or $x(t)$
$\frac{\hat{\boldsymbol{\mu}}_{\mathbf{x}}, \hat{\mathbf{m}}_{\mathbf{x}}}{\hat{r}_{x}(\tau), \hat{R}_{x}(\tau)}$	Sample mean vector of $\mathbf{x}[n]$ or $\mathbf{x}(t)$
$\hat{r}_{x}( au), \hat{R}_{x}( au)$	Estimated autocorrelation function
	of the signal $x(t)$ or $x[n]$ [24]
$\hat{S}_x(f), \hat{S}_x(j\omega)$	Estimated power spectral density
	(PSD) of $x(t)$ in linear $(f)$ or angular
	$(\omega)$ frequency
$\hat{\mathbf{R}}_{\mathbf{x}}$	Sample (auto)correlation matrix
$\hat{r}_{x,d}( au), \hat{R}_{x,d}( au)$	Estimated cross-correlation between
	x[n] and $d[n]$ or $x(t)$ and $d(t)$
$\hat{S}_{x,y}(f), \hat{S}_{x,y}(j\omega)$	Estimated cross PSD of $x(t)$ and $y(t)$
	in linear or angular $(\omega)$ frequency
$\hat{\mathbf{R}}_{\mathbf{x}\mathbf{y}}$	Sample cross-correlation matrix of
•	$\mathbf{R}_{\mathbf{x}\mathbf{y}}$
$\hat{c}_x( au), \hat{C}_x( au)$	Estimated autocovariance function of
	the signal $x(t)$ or $x[n]$
$\hat{\mathbf{C}}_{\mathrm{x}},\hat{\mathbf{K}}_{\mathrm{x}},\hat{\mathbf{\Sigma}}_{\mathrm{x}}$	Sample (auto)covariance matrix
$\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)$	Estimated cross-covariance function
	of the signal $x(t)$ or $x[n]$

$\hat{ extbf{C}}_{ ext{xy}}, \hat{ extbf{K}}_{ ext{xy}}, \hat{ extbf{\Sigma}}_{ ext{xy}}$	Sample cross-covariance matrix
Ĥ	Estimate of the Hessian matrix

## 4.3 Signals, (hyper)parameters, system performance, and criteria

N	Number of instances (or samples),
	i.e., $n \in \{1, 2,, N\}$
$N_e$	Number of epochs
$N_a$	Number os attributes
K	Number of classes
$\mathbf{x}(n), \mathbf{x}_n$	Input signal
$\mathbf{y}(n), \mathbf{y}_n$	Output signal $(y(n))$ or $y_n$ if the de-
	sired signal is scalar)
$d(n), d_n$	Desired label (in case of supervised
	learning; $d(n)$ or $d_n$ if the desired sig-
	nal is scalar)
$e(n), e_n$	Error signal
$\hat{\mathbf{y}}(n), \hat{\mathbf{y}}_n$	Alternative output signal
$y(n), y_n$	Alternative desired signal if the out-
	put is $\mathbf{y}(n), \mathbf{y}_n$
$\mathbf{w}(n), \mathbf{w}_n, \mathbf{\theta}(n), \mathbf{\theta}_n$	Parameters, coefficients, or weights
	vector
$w_0(n), b(n)$	Bias (the first term of the weight vec-
	tor)
$v(n), \mathbf{w}^{\top}(n)\mathbf{x}(\mathbf{n})$	Induced local field [5] (also called
	weighted input, or net input)
$\mathbf{w}_{o}, \mathbf{w}^{\star}, \mathbf{\theta}_{o}, \mathbf{\theta}^{\star}$	Optimum value of the parameters,
	coefficients, or weights vector ( $\mathbf{w}^*$ is
	also used [5] but it is not recom-
	mended as it may be confused with
	the conjugation operator)
W	Matrix of the weights
$\mathbf{X}, \begin{bmatrix} \mathbf{x}(1) & \mathbf{x}(2) & \cdots & \mathbf{x}(N) \end{bmatrix}$	Data matrix
$\frac{\eta(n)}{\mathscr{R}}$	Learning rate hyperparameter [5]
	Bayes risk or average risk [5]
$c_{ij}, C_{ij}$	Misclassification cost in deciding in
	favor of class $\mathcal{C}_i$ (represented in the
	subspace $\mathcal{H}_i$ ) when the $\mathcal{C}_j$ is the true
	class (used in Bayes classifiers/detec-
	tors) [5, 8]
$\mathscr{C}_k$	kth class [5]

${\mathscr T}$	Training set, i.e., the set $\{\mathbf{x}(n), d(n)\}$
	that is used in the training phase [5]
$\mathcal{H}_k$	Subspace of the training vector be-
	longing to the class $\mathcal{C}_k$
$\mathcal{H}$	Complete space of the input vector,
	i.e., $\mathcal{H}_1 \cup \mathcal{H}_2 \cup \cdots \mathcal{H}_K$
$\varphi(\cdot)$	Activation function
$\mathscr{E}(\mathbf{w}), \mathscr{E}(\mathbf{w}(n)), \mathscr{E}(n)$	Cost function or objective function
	(the way it is written depends on the
	purpose of the text)
$J(\mathbf{w}), J(\mathbf{w}(n)), J(n)$	Alternative to the cost function
$\Delta \mathcal{E}(\mathbf{w}(n)), \Delta \mathcal{E}(n), \mathcal{E}(\mathbf{w}(n+1))$	Cost function or objective function
$\mathscr{E}(\mathbf{w}(n))$	(the way it is written depends on the
	purpose of the text)
$\mathscr{E}_{\mathrm{av}}(\cdot)$	Error energy averaged over the train-
	ing sample or the empirical risk [5]
$\Lambda(\cdot)$	Likelihood function
$\Lambda_l(\cdot)$	Log-likelihood function
$\hat{ ho}_{x,y}$	Estimated Pearson correlation coeffi-
•	cient between $x$ and $y$
ρ	Distance of the margin of separation
	between two classes (Support Vector
	Machine, SVM)
$g(\cdot)$	Discriminant function, i.e., $g(\mathbf{w}^*) = 0$

## 5 Linear Algebra

#### 5.1 Common matrices and vectors

$\mathbf{W}, \mathbf{D}$	Diagonal matrix
P	Projection matrix; Permutation ma-
	trix
J	Jordan matrix
L	Lower matrix
U	Upper matrix
C	Cofactor matrix
$\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$	Cofactor matrix of A
S	Symmetric matrix
$rac{ extbf{Q}}{ extbf{I}_N}$	Orthogonal matrix
$\mathbf{I}_N$	$N \times N$ -dimensional identity matrix
$0_{M  imes N}$	$M \times N$ -dimensional null matrix
$0_N$	N-dimensional null vector

$\overline{1_{M imes N}}$	$M \times N$ -dimensional ones matrix
$1_N$	N-dimensional ones vector
0	Null matrix, vector, or tensor (di-
	mensionality understood by context)
1	Ones matrix, vector, or tensor (di-
	mensionality understood by context)

#### 5.2 Indexing

$x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$	Element in the position
2,2, ,1,	$(i_1, i_2, \ldots, i_N)$ of the tensor $\mathcal X$
$\mathcal{X}^{(n)}$	nth tensor of a nontemporal sequence
$X_n, X_{:n}$	nth column of the matrix $X$
$\mathbf{x}_{n}$ :	nth row of the matrix $X$
$\mathbf{x}_{i_1,\ldots,i_{n-1},:,i_{n+1},\ldots,i_N}$	Mode- $n$ fiber of the tensor $\mathcal{X}$
$\mathbf{x}_{:,i_2,i_3}$	Column fiber (mode-1 fiber) of the
	thrid-order tensor $\mathcal{X}$
$\mathbf{x}_{i_1,:,i_3}$	Row fiber (mode-2 fiber) of the thrid-
	order tensor $\mathcal{X}$
$\mathbf{x}_{i_1,i_2,:}$	Tube fiber (mode-3 fiber) of the
	thrid-order tensor $\mathcal{X}$
$X_{i_1,:,:}$	Horizontal slice of the thrid-order
	tensor $\mathcal{X}$
$\mathbf{X}_{:,i_2,:}$	Lateral slices slice of the thrid-order
	tensor $\mathcal{X}$
$\overline{\mathbf{X}_{i_3},\mathbf{X}_{:,:,i_3}}$	Frontal slices slice of the thrid-order
	tensor $\mathcal{X}$

#### 5.3 General operations

$\left\langle \mathbf{a},\mathbf{b}\right angle ,\mathbf{a}^{ op}\mathbf{b},\mathbf{a}\cdot\mathbf{b}$	Inner or dot product
$\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{ op}$	Outer product
$\otimes$	Kronecker product
$\odot$	Hadamard (or Schur) (elementwise)
	product
.⊙n	nth-order Hadamard power
$0.0\frac{1}{n}$	nth-order Hadamard root
$\odot \frac{1}{n}$	nth-order Hadamard root Hadamard (or Schur) (elementwise)
-	
-	Hadamard (or Schur) (elementwise)
0	Hadamard (or Schur) (elementwise) division

#### 5.4 Operations with matrices and tensors

$\mathbf{A}^{-1}$	Inverse matrix
$\mathbf{A}^{+},\mathbf{A}^{\dagger}$	Moore-Penrose left pseudoinverse
$\mathbf{A}^{T}, \mathbf{A}^{T}, \mathbf{A}^{t}, \mathbf{A}^{'}$ [30]	Transpose
$\mathbf{A}^{-\top}$	Transpose of the inverse, i.e.,
	$(\mathbf{A}^{-1})^{T} = (\mathbf{A}^{T})^{-1} \ [15, 26]$
$\mathbf{A}^*$	Complex conjugate
$\mathbf{A}^{H}$	Hermitian
$\ \mathbf{A}\ _{\mathrm{F}}$	Frobenius norm
A	Matrix norm
$ \mathbf{A} , \det(\mathbf{A})$	Determinant
$\operatorname{diag}\left(\mathbf{A}\right)$	The elements in the diagonal of A
<b>E</b> [A]	Vectorization: stacks the columns of
	the matrix $\mathbf{A}$ into a long column vec-
	tor
$\mathbf{E}_{d}\left[\mathbf{A}\right]$	Extracts the diagonal elements of a
	square matrix and returns them in a
	column vector
$\mathbf{E}_{l}\left[\mathbf{A} ight]$	Extracts the elements strictly below
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_{u}\left[\mathbf{A}\right]$	Extracts the elements strictly above
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\mathbf{E}_b\left[\mathbf{A}\right]$	Block vectorization operator: stacks
	square block matrices of the input
	into a long block column matrix
$\operatorname{unvec}\left(\mathbf{A}\right)$	Reshapes a column vector into a ma-
	trix
$\mathrm{tr}\{\mathbf{A}\}$	trace
$X_{(n)}$	$n$ -mode matricization of the tensor $\mathcal{X}$

#### 5.5 Operations with vectors

$\ \mathbf{a}\ $	$l_1$ norm, 1-norm, or Manhattan norm
$\ \mathbf{a}\ , \ \mathbf{a}\ _2$	$l_2$ norm, 2-norm, or Euclidean norm
$\frac{\ \mathbf{a}\ _p}{\ \mathbf{a}\ _p}$	$l_p$ norm, $p$ -norm, or Minkowski norm
$\ \mathbf{a}\ _{\infty}$	$l_{\infty}$ norm, $\infty$ -norm, or Chebyshev
	norm

diag (a)	Diagonalization: a square, diagonal
	matrix with entries given by the vec-
	$\operatorname{tor} \mathbf{a}$

#### 5.6 Decompositions

Λ	Eigenvalue matrix [32]
Q	Eigenvectors matrix; Orthogonal ma-
	trix of the QR decomposition $[32]$
R	Upper triangular matrix of the QR
	decomposition[32]
U	Left singular vectors[32]
$\overline{\mathbf{U}_r}$	Left singular nondegenerated vectors
Σ	Singular value matrix
$\Sigma_r$	Singular value matrix with nonzero
	singular values in the main diagonal
$\Sigma^+$	Singular value matrix of the pseu-
	doinverse [32]
$\Sigma_r^+$	Singular value matrix of the pseu-
	doinverse with nonzero singular val-
	ues in the main diagonal
V	Right singular vectors [32]
$\overline{\mathbf{V}}_r$	Right singular nondegenerated vec-
	tors
$\operatorname{eig}\left(\mathbf{A}\right)$	Set of the eigenvalues of <b>A</b> [9, 23, 26]
$\llbracket \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots  bracket$	CANDECOMP/PARAFAC (CP) de-
	composition of the tensor $\mathcal X$ from the
	outer product of column vectors of $\mathbf{A}$ ,
	B, C,
$[\![\boldsymbol{\lambda};\mathbf{A},\mathbf{B},\mathbf{C},\ldots]\!]$	Normalized CANDE-
	COMP/PARAFAC (CP) decom-
	position of the tensor $\mathcal{X}$ from the
	outer product of column vectors of
	$\mathbf{A},\mathbf{B},\mathbf{C},\dots$

#### 5.7 Spaces and sets

#### 5.7.1 Common spaces and sets

$\mathbb{R}$	Set of real numbers
[a,b]	Closed interval of a real set from $a$ to
	b

$\overline{(a,b)}$	Opened interval of a real set from a
<b>.</b> . ,	to b
$\boxed{[a,b),(a,b]}$	Half-opened intervals of a real set
	from $a$ to $b$
$\mathbb{C}$	Set of complex numbers
$\mathbb{Z}$	Set of integer number
$\overline{\{1,2,\ldots,n\}}$	Discrete set containing the integer el-
	ements $1, 2, \ldots, n$
$\mathbb{B} = \{0, 1\}$	Boolean set
Ø	Empty set
N	Set of natural numbers
$\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$	Real or complex space (field)
$\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$	$I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or
	complex) space
K <sub>+</sub>	Nonnegative real (or complex) space
	[6]
K <sub>++</sub>	Positive real (or complex) space, i.e.,
	$\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [6]$
U	Universe
$-2^A$	Power set of A

#### 5.7.2 Convex sets (or spaces)

$\mathbb{S}^n$ [10], $\mathcal{S}^n$ [6]	Conic set of the symmetric matrices
	in $\mathbb{R}^{n \times n}$
$\mathbb{S}^n_+,\mathcal{S}^n_+$	Conic set of the symmetric positive
	semidefinite matrices in $\mathbb{R}^{n \times n}$ [6]
$\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$	Conic set of the symmetric positive
	definite matrices in $\mathbb{R}^{n\times n}$ , i.e., $\mathbb{S}^n_{++}$ =
	$\mathbb{S}^n_+ \setminus \{0\}$ [6]
$\mathbb{H}^n$	Set of all hermitian matrices in $\mathbb{C}^{n\times n}$
conv C	Convex hull
aff C	Affune hull
$\mathcal{R}$	Ray
$\mathcal{H}$	Hyperplane
$\mathcal{H}_+, \mathcal{H}$	Positive/negative halfspace
$B(\mathbf{x}_c, r)$	Euclidean ball with radium $r$ and
	centered at $\mathbf{x}_c$
<u>ε</u> <u>C</u> <u>K</u>	Ellipsoid
$\overline{C}$	Norm cone
	Proper cone
<i>K</i> *	Dual cone
$\mathcal{P}$	Polyhedra
<del>-</del>	

S	Simplex
$C_{\alpha}$	$\alpha$ -sublevel set
epi $f$	Epigraph of the function $f$
hypo $f$	Hypograph of the function $f$

#### 5.7.3 Spaces from matrices or vectors

$\mathrm{span}\left\{\mathbf{a}_1,\mathbf{a}_2,\ldots,\mathbf{a}_n\right\}$	Vector space spanned by the argument vectors [15]
$C(\mathbf{A})$ , columnspace( $\mathbf{A}$ ), range( $\mathbf{A}$ ),	Columnspace, range or image, i.e.,
$\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$	the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$ , where
	$\mathbf{a}_i$ is the ith column vector of the ma-
	trix <b>A</b> [24, 32]
$C(\mathbf{A}^{H})$	Row space (also called left
	columnspace) [24, 32]
$\overline{\mathrm{N}\left(\mathbf{A}\right)}$ , $\mathrm{nullspace}(\mathbf{A})$ , $\mathrm{null}(\mathbf{A})$ , $\mathrm{kernel}(\mathbf{A})$	Nullspace (or kernel space) [24, 32,
	33]
$N(\mathbf{A}^{H})$	Left nullspace
$\operatorname{rank} \mathbf{A}$	Rank, that is, $\dim(\operatorname{span}\{A\}) =$
	$\dim \left( \mathrm{C}\left( \mathbf{A}\right) \right)  \left[ 24 \right]$
nullity (A)	Nullity of $\mathbf{A}$ , i.e., dim $(N(\mathbf{A}))$

#### 5.8 Set operations

A + B	Set addition (Minkowski sum), i.e., $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
	$\begin{bmatrix} \mathbf{v} \in \mathbb{R} &   \mathbf{v} = \mathbf{x} + \mathbf{y}, & \mathbf{x} \in \mathcal{H} \land \mathbf{y} \in \mathcal{Y} \end{bmatrix}$ $\begin{bmatrix} 21 \end{bmatrix}$
A-B	Minkowski difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
$A\ominus B$	Pontryagin difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} \ [21]$
$A \setminus B, A - B$	Set difference or set subtraction, i.e.,
	$A \setminus B = \{x   x \in A \land x \notin B\}$ the set con-
	taining the elements of $A$ that are not
	in $B$ [29]
$A \cup B$	Set of union
$A \cap B$	Set of intersection
$A \times B$	Cartesian product
$A^n$	$A \times A \times \cdots \times A$
	n  times
$A^{\perp}$	Orthogonal complement of $A$ , e.g.,
	$N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [6]$

$a \perp b$	<b>a</b> is orthogonal to <b>b</b>
	<u> </u>
a ≠ b	<b>a</b> is not orthogonal to <b>b</b>
$A \oplus B$	Direct sum, i.e., each $\mathbf{v} \in$
	$\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a
	unique representation of $\sum \mathbf{a}_i$ with
	$\mathbf{a}_i \in S_i$ . That is, they expand to a
	, , ,
	space. Note that $\{S_i\}$ might not be
	orthogonal each other [15]
$A \overset{\perp}{\oplus} B$	Direct sum of two spaces that are or-
	thogonal and span a n-dimensional
	space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
	$\mathbb{R}^n$ (this decomposition of $\mathbb{R}^n$ is
	called the orthogonal decomposition
	induced by $\mathbf{A}$ ) [6]
$\bar{A}, A^c$	Complement set (given $U$ )
#A,  A	Cardinality of A
$a \in A$	a is element of $A$
$a \notin A$	a is not element of A

#### 5.9 Inequalities

$\mathcal{X} \leq 0$ Nonnegative tensor $\mathbf{a} \leq_K \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} <_K \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the interior of the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} \leq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or- than conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive or- thant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} <_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of the conic subset $K$ in the space $\mathbb{S}^n[6]$		
$\mathbf{b} - \mathbf{a} \text{ belongs to the conic subset } K \text{ in }$ $\mathbf{the space } \mathbb{R}^n[6]$ $\mathbf{a} \prec_K \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the interior of the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} \preceq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative orthant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n.[6]$ $\mathbf{a} \prec \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \preceq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of	$\mathcal{X} \le 0$	Nonnegative tensor
the space $\mathbb{R}^n[6]$ $\mathbf{a} \prec_K \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the interior of the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} \preceq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative orthant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n.[6]$ $\mathbf{a} \prec \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \preceq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of	$\mathbf{a} \leq_K \mathbf{b}$	Generalized inequality meaning that
$\begin{array}{cccccccccccccccccccccccccccccccccccc$		$\mathbf{b} - \mathbf{a}$ belongs to the conic subset $K$ in
that $\mathbf{b} - \mathbf{a}$ belongs to the interior of the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} \leq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative orthant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n.[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} <_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of		the space $\mathbb{R}^n[6]$
the conic subset $K$ in the space $\mathbb{R}^n[6]$ $\mathbf{a} \leq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative orthant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n.[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of	$\mathbf{a} \prec_K \mathbf{b}$	Strict generalized inequality meaning
$\mathbf{a} \leq \mathbf{b}$ Generalized inequality meaning that $\mathbf{b} - \mathbf{a} \text{ belongs to the nonnegative orthant conic subset, } \mathbb{R}^n_+, \text{ in the space } \mathbb{R}^n.[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a} \text{ belongs to the positive orthant conic subset, } \mathbb{R}^n_{++}, \text{ in the space } \mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A} \text{ belongs to the conic subset } K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A} \text{ belongs to the interior of } \mathbf{A} \leq_K \mathbf{B}$		that $\mathbf{b} - \mathbf{a}$ belongs to the interior of
$\begin{array}{c} \mathbf{b} - \mathbf{a} \text{ belongs to the nonnegative orthant conic subset, } \mathbb{R}^n_+, \text{ in the space } \\ \mathbb{R}^n.[6] \\ \mathbf{a} < \mathbf{b} \\ & \text{Strict generalized inequality meaning that } \mathbf{b} - \mathbf{a} \text{ belongs to the positive orthant conic subset, } \mathbb{R}^n_{++}, \text{ in the space } \\ \mathbb{R}^n[6] \\ \mathbf{A} \leq_K \mathbf{B} \\ & \text{Generalized inequality meaning that } \\ \mathbf{B} - \mathbf{A} \text{ belongs to the conic subset } K \\ \text{in the space } \mathbb{S}^n[6] \\ \mathbf{A} <_K \mathbf{B} \\ & \text{Strict generalized inequality meaning that } \\ \mathbf{B} - \mathbf{A} \text{ belongs to the interior of } \\ \end{array}$		the conic subset $K$ in the space $\mathbb{R}^n[6]$
thant conic subset, $\mathbb{R}^n_+$ , in the space $\mathbb{R}^n.[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} <_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of	$a \le b$	Generalized inequality meaning that
$\mathbb{R}^{n}.[6]$ $\mathbf{a} < \mathbf{b}$ Strict generalized inequality meaning that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^{n}_{++}$ , in the space $\mathbb{R}^{n}[6]$ $\mathbf{A} \leq_{K} \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^{n}[6]$ $\mathbf{A} <_{K} \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of		$\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-
$\begin{array}{cccccccccccccccccccccccccccccccccccc$		thant conic subset, $\mathbb{R}^n_+$ , in the space
that $\mathbf{b} - \mathbf{a}$ belongs to the positive orthant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of		$\mathbb{R}^n$ .[6]
thant conic subset, $\mathbb{R}^n_{++}$ , in the space $\mathbb{R}^n[6]$ $\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the conic subset $K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of	a < b	Strict generalized inequality meaning
$\begin{array}{cccccccccccccccccccccccccccccccccccc$		that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-
$\mathbf{A} \leq_K \mathbf{B}$ Generalized inequality meaning that $\mathbf{B} - \mathbf{A} \text{ belongs to the conic subset } K$ in the space $\mathbb{S}^n[6]$ $\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A} \text{ belongs to the interior of }$		thant conic subset, $\mathbb{R}^n_{++}$ , in the space
		$\mathbb{R}^n[6]$
$\begin{array}{c} \text{ in the space } \mathbb{S}^n[6] \\ \hline \mathbf{A} \prec_K \mathbf{B} & \text{Strict generalized inequality meaning} \\ \text{ that } \mathbf{B} - \mathbf{A} \text{ belongs to the interior of} \end{array}$	$\mathbf{A} \leq_K \mathbf{B}$	Generalized inequality meaning that
$\mathbf{A} \prec_K \mathbf{B}$ Strict generalized inequality meaning that $\mathbf{B} - \mathbf{A}$ belongs to the interior of		${f B}-{f A}$ belongs to the conic subset $K$
that $\mathbf{B} - \mathbf{A}$ belongs to the interior of		in the space $\mathbb{S}^n[6]$
· ·	$\mathbf{A} \prec_K \mathbf{B}$	Strict generalized inequality meaning
· ·		that $\mathbf{B} - \mathbf{A}$ belongs to the interior of

$A \leq B$	Generalized inequality meaning that
	$\mathbf{B} - \mathbf{A}$ belongs to the positive semidef-
	inite conic subset, $\mathbb{S}_{+}^{n}$ , in the space
	$\mathbb{S}^n[6]$
A < B	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the positive or-
	thant conic subset, $\mathbb{S}_{++}^n$ , in the space
	$\mathbb{S}^{n}[6]$

## 6 Communication systems

## 6.1 Symbols

B	One-sided bandwidth of the trans-
	mitted signal, in Hz
W	One-sided bandwidth of the trans-
	mitted signal, in rad/s
$x_i$	Real or in-phase part of $x$
$\frac{x_q}{f_c, f_{RF}}$	Imaginary or quadrature part of $x$
$f_c, f_{RF}$	Carrier frequency (in Hertz)
$f_L$	Carrier frequency in L-band (in
	Hertz)
$\frac{f_{IF}}{f_s}$	Intermediate frequency (in Hertz)
$f_s$	Sampling frequency or sampling rate
	(in Hertz)
$T_s$	Sampling time interval/duration/pe-
	riod
R	Bit rate
T	Bit interval/duration/period
$\frac{T_c}{T_{sy}, T_{sym}}$	Chip interval/duration/period
$T_{sy}, T_{sym}$	Symbol/signaling[27] interval/dura-
	tion/period
$S_{RF}$	Transmitted signal in RF
$S_{FI}$	Transmitted signal in FI
$S, S_l$	Lowpass (or baseband) equivalent
	signal or envelope complex of trans-
	mitted signal
$r_{RF}$	Received signal in RF
$r_{FI}$	Received signal in FI
$r, r_l$	Lowpass (or baseband) equivalent
	signal or envelope complex of re-
	ceived signal
$\phi$	Signal phase

$\phi_0$	Initial phase
$\eta_{RF}, w_{RF}$	Noise in RF
$\overline{\eta_{FI}, w_{FI}}$	Noise in FI
$\eta$ , w	Noise in baseband
τ	Timing delay
$\Delta \tau$	Timing error (delay - estimated)
$\varphi$	Phase offset
$\Delta \varphi$	Phase error (offset - estimated)
$f_d$	Linear Doppler frequency
$\Delta f_d$	Frequency error (Doppler frequency -
	estimated)
ν	Angular Doppler frequency
$\Delta v$	Frequency error (Doppler frequency -
	estimated)
$\gamma, A$	Transmitted signal amplitude
$\gamma_0, A_0$	Combined effect of the path loss and
	antenna gain

### ${\bf 6.2}\quad {\bf Fading\ multipath\ channels}$

$t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda$	Support temporal of the signal. $\lambda$ is obtained after taking the Fourier transform on $t$ .
$\tau \stackrel{\mathcal{F}}{\longleftrightarrow} f$	Second support temporal of the signal $(c(t))$ varies with with the input at the time $\tau$ ). $f$ is obtained after taking the Fourier transform on $\tau$ .
c(t, au)	Complex envelope of the channel response at the time $t$ due to an impulse applied at the $t-\tau$
C(f,t)	Transfer function of $c(t, \tau)$ in $\tau$
$\alpha(t,\tau)$	Attenuation of $c(t,\tau)$ , i.e., $c(t,\tau) = \alpha(t,\tau)e^{e\pi f_c\tau}$
$R_c( au_1, au_2,\Delta t)$	Autocorrelation function of
	$c(t,\tau),  \text{i.e.,}  R_c(\tau_1,\tau_2,\Delta t) = \\ \mathbb{E}\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right]$
$R_c( au, \Delta t)$	Autocorrelation function of $c(t, \tau)$ assuming uncorrelated scattering
$R_c(\tau), R_c(\tau, \Delta t)\big _{\Delta t=0}$	Multipath intensity profile or delay power spectrum

D (ACA) D (C C A)	C 1.C 1
$R_C(\Delta f, \Delta t), R_C(f_1, f_2; \Delta t),$	Spaced-frequency, spaced-time corre-
$\mathrm{E}\left[C(f_1,t),C(f_2,t+\Delta t)\right],$	lation function $(\Delta f = f_2 - f_1)$
${\cal F}_{ au}\left\{R_{\scriptscriptstyle C}( au,\Delta t) ight\}$	
$R_C(\Delta f), R_C(\Delta f, \Delta t) _{\Delta t=0}, \mathcal{F}\{R_c(\tau)\}$	Spaced-frequency correlation func-
-24-0	tion
$(\Delta f)_c$	Coherence bandwidth of $c(t)$ , that
	is, the frequency interval in which
	$R_C(\Delta f)$ is nonzero
$T_m$	Multipath spread of the channel, that
	is, the time interval in which $R_c(\tau)$ is
	nonzero $(T_m \approx 1/(\Delta f)_c)$
$\frac{R_C(\Delta t), R_C(\Delta f, \Delta t) _{\Delta f=0}}{S_C(\lambda), \mathcal{F}\left\{R_C(\Delta t)\right\}}$	Spaced-time correlation function
$S_C(\lambda), \mathcal{F}\left\{R_C(\Delta t)\right\}$	Doppler power spectrum
$(\Delta t)_c$	Coherence time of $c(t)$ , that is, the
	time interval in which $R_C(\Delta t)$ is
	nonzero
$B_m$	Multipath spread of the channel, that
	is, the frequency interval in which
	$S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$
$S_C(\tau,\lambda), \mathcal{F}_{\Delta f,\Delta t} \left\{ R_C(\Delta f,\Delta t) \right\}$	Scattering function

#### 7 Discrete mathematics

## 7.1 Quantifiers, inferences

$\forall$	For all (universal quantifier) [16]
3	There exists (existential quantifier)
	[16]
<u></u> ∄ ∃!	There does not exist [16]
	There exist an unique [16]
€	Belongs to [16]
∉	Does not belong to [16]
::	Because [16]
<u> ,:</u>	Such that, sometimes that parenthe-
	ses is used [16]
$\overline{}$ ,, $(\cdot)$	Used to separate the quantifier with
	restricted domain from its scope, e.g.,
	$\forall x < 0 (x^2 > 0) \text{ or } \forall x < 0, x^2 > 0$
	[16]
<i>∴</i> .	Therefore [16]

#### 7.2 Propositional Logic

$\neg a$	Logical negation of $a$ [29]
$a \wedge b$	Conjunction (logical AND) operator
	between $a$ and $b[29]$
$a \lor b$	Disjunction (logical OR) operator be-
	tween $a$ and $b[29]$
$a \oplus b$	Exclusive OR (logical XOR) operator
	between $a$ and $b[29]$
$a \rightarrow b$	Implication (or conditional) state-
	ment[29]
$a \leftrightarrow b$	Bi-implication (or biconditional)
	statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$
	[29]
$a \equiv b, a \iff b, a \Leftrightarrow b$	Logical equivalence, i.e., $a \leftrightarrow b$ is a
	tautology[29]

#### 7.3 Operations

a	Absolute value of $a$
log	Base-10 logarithm or decimal loga-
	rithm
ln	Natual logarithm
$\operatorname{Re}\left\{ x\right\}$	Real part of x
$\operatorname{Im}\left\{ x\right\}$	Imaginary part of x
۷٠	Phase (complex argument)
$x \mod y$	Remainder, i.e., $x - y \lfloor x/y \rfloor$ , for $y \neq 0$
x div y	Quotient [29]
$x \equiv y \pmod{m}$	Congruent, i.e., $m \setminus (x - y)$ [29]
$\operatorname{frac}(x)$	Fractional part, i.e., $x \mod 1$ [16]
$a \setminus b, a \mid b$	b is a positive integer multiple of $a$ ,
	i.e., $\exists n \in \mathbb{Z}_{++} \mid b = na \ [16, \ 29]$
$a \ \ b, a \ \ b$	b is not a positive integer multiple of
	$a, \text{ i.e., } \not\equiv n \in \mathbb{Z}_{++} \mid b = na \ [16, \ 29]$
[·]	Ceiling operation [16]
[.]	Floor operation [16]

#### 8 Vector Calculus

Vector differential operator (Nabla
symbol), i.e., $\nabla f$ is the gradient of
the scalar-valued function $f$ , i.e., $f$ :
$\mathbb{R}^n \to \mathbb{R}$

	$ \#_{S} $	

$\overline{1(u,v)}$	Vector position
(,,	(x(u, v), y(u, v), z(u, v)) parametrized
	by $(u, v)$
$l_u$	$(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)$
$\frac{1}{1_{v}}$	$(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$
$\frac{}{\mathrm{d}A}$	Differential operator of a 2D area
	(denoted by $D$ or $R$ ) in the $\mathbb{R}^2$ do-
	main. This differential operator can
	be solved in different ways (rectangu-
	lar, polar, cylindric, etc) [31]
D,R	Integration domain in which $dA$ is in-
	tegrated, i.e., $\iint_D f  dA$ [31]
S	Smooth surface S, i.e., a 2D area in a
	3D space ( $\mathbb{R}^3$ domain)
$dS$ , $ \mathbf{l}_u \times \mathbf{l}_v  dA$	Differential operator of a 2D area in
	a 3D domain (an surface). Note that
	$dS =  \mathbf{l}_u \times \mathbf{l}_v  dA$ should be accompa-
	nied with the change of the integra-
	tion interval (from $S$ to $D$ )
$A(S), \iint_{S} dS, \iint_{D}  \mathbf{l}_{u} \times \mathbf{l}_{v}  dA$	Area of the surface $S$ parametrized by
00 00 D	(u, v), in which dA is the area defined
	in the $D$ domain (which is form by
	the $u$ -by- $v$ graph)
$\mathrm{d}V$	Differential operator of a shape vol-
	ume (denoted by $E$ ) in $\mathbb{R}^3$ domain,
	i.e., $\iiint_E dV = V$
E	Integration domain in which $dV$ is in-
	tegrated, i.e., $\iiint_E f  dV$ [31]
$V, \iint_D f  \mathrm{d}A, \iiint_E f  \mathrm{d}V$	Volume of the function $f$ over the re-
	gions $D$ (in the case of double inte-
	grals) or $E$ (in the case of triple inte-
	grals)
$\frac{\iint_{S} f  \mathrm{d}S, \iint_{D} f   \mathbf{l}_{u} \times \mathbf{l}_{v}    \mathrm{d}A}{\mathbf{n}(u, v), \frac{\mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v)}{ \mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v) }}$	Surface integral over $S$
$\mathbf{n}(u,v), \frac{\mathbf{l}_u(u,v)\times\mathbf{l}_v(u,v)}{ \mathbf{l}_u(u,v)\times\mathbf{l}_v(u,v) }$	Normal vector of of the smooth sur-
	face $S$
$\iint_{S} \mathbf{F} \cdot \mathbf{n}  \mathrm{d}S , \iint_{S} \mathbf{F} \cdot \mathrm{d}\mathbf{S} ,$	Flux integral of vector field ${\bf F}$ through
$\iint_D \mathbf{F} \cdot (\mathbf{l}_u \times \mathbf{l}_v)  \mathrm{d}A$	the smooth surface $S$ ( $\mathbf{n} dS \triangleq d\mathbf{S}$ )
$\iint_{D} \mathbf{F} \cdot (\mathbf{l}_{u} \times \mathbf{l}_{v})  dA$ $\oiint_{S} \mathbf{F} \cdot \mathbf{n}  dS, \oiint_{S} \mathbf{F} \cdot d\mathbf{S},$	Flux integral of vector field $\mathbf{F}$ through
$\iint_{D} \mathbf{F} \cdot (\mathbf{l}_{u} \times \mathbf{l}_{v})  \mathrm{d}A$	the smooth and closed surface $S$
JJD = (-u + -v) + u + v	$(\mathbf{n}  \mathrm{d} S \triangleq \mathrm{d} \mathbf{S})$
$\nabla \times \mathbf{F}$ , curl $\mathbf{F}$	Curl (rotacional) of the vector field <b>F</b>
$\nabla \cdot \mathbf{F}$ , div $\mathbf{F}$	Divercence of the vector field ${f F}$

$\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,$	Scalar Laplacian operator (per-
$\partial^2 f/\partial x^2 + \partial^2 f/\partial y^2 + \partial^2 f/\partial z^2$	formed on a scalar-valued function
	$f: \mathbb{R}^n \to \mathbb{R}$
$\nabla^2 \mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla (\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$	Vector Laplacian operator (per-
$(\partial^2 \mathbf{F}/\partial x^2, \partial^2 \mathbf{F}/\partial y^2, \partial^2 \mathbf{F}/\partial z^2)$	formed on a vector field, i.e., a
	vector-valued function, $\mathbf{F}: \mathbb{R}^n \to$
	$\mathbb{R}^n$ ). $\nabla^2$ denotes the scalar (vector)
	Laplacian if the function is scalar-
	valued (vector-valued). The notation
	$\Delta$ must be avoided as it is overused
	in many contexts

## 9 Electromagnetic waves

$\Phi$	Electric flux (scalar) (in V m)
J	Electric current density vector (in
	$A/m^2$ )
H	Magnetic field vector (in A/m)
В	Magnetic flux density vector (in
	$Wb/m^2 = T$ )
$q_{ m free}$	Free electric charge (in C)
$q_{ m bound}$	Bound electric charge (in C)
$q, q_{\text{free}} + q_{\text{bound}}$	Electric charge (in C)
$ ho_{ m free}$	Free electric charge density
$\rho_{ m bound}$	Electric charge density
$\rho, \rho_{\text{free}} + \rho_{\text{bound}}$	Electric charge density (it can be
	in $C/m^3$ , $C/m^2$ or $C/m$ depending
	whether it is a volume, surface, or
	line shapes)
f	Electrostatic force (Coulomb force),
	$(\text{in kg m/s}^2)$
ε	Electric permittivity(in F/m) [28]
$\varepsilon_r$	Relative electric permittivity or di-
	electric constant (in F/m) [28]
$\epsilon_0$	Electric permittivity in vacuum,
	$8.854 \times 10^{-12} \mathrm{F/m}$ [28]
_ <b>E</b>	Electric field vector (in V/m)
D	Electric flux density, electric dis-
	placement, or electric induction vec-
	tor (in $C/m^2$ )
$\Phi_D, \Psi, \oiint_S \mathbf{D} \mathrm{d}\mathbf{S}$	Electric flux ( <b>D</b> -filed flux) [13]
$\Phi_E, \oiint_S \mathbf{E}  \mathrm{d}\mathbf{S}$	Electric flux ( <b>E</b> -filed flux) [14]

P	Electric polarization of the material
	$(in C/m^2)$
$\chi_e$	Electric susceptibility (for linear and
	isotropic materials)
$\mu$	Magnetic permeability
$\mu_0$	Magnetic permeability in vacuum

#### 10 Generic mathematical symbols

	Q.E.D.
<u>A</u>	Equal by definition
:=, ←	Assignment [29]
<b>≠</b>	Not equal
∞	Infinity
i	$\sqrt{-1}$

#### 11 Abbreviations

PS: Only names of techniques and algorithms or usual abbreviations are considered.

wrt.	With respect to
st.	Subject to
iff.	If and only if
EVD	Eigenvalue decomposition, or eigen-
	decomposition [24]
SVD	Singular value decomposition
CP	CANDECOMP/PARAFAC
SGD	Stochastic gradient descent
SVM	Support vector machine
BPNN	Backpropagation neural network [20]
RBF	Radial basis function
