## 1 Font notation

$a, b, c, \ldots, A, B, C, \ldots$	Scalars or tuples (the elements
	should be denoted in parentheses
	[41], although some authors also de-
	note them in angle brackets [11])
$a, b, c, \dots$	Vectors
$\overline{A,B,C,\dots}$	Matrices
$A, B, C, \dots$	Tensors
$A, B, C, \dots, A, B, C, \dots, A, B, C, \dots$	Sets

## 2 Signals and functions

#### 2.1 Time indexing

x(t)	Continuous-time $t$
$x[n],x[k],x[m],x[i],\ldots$	Discrete-time $n, k, m, i, \dots$ (parenthe-
$x_n, x_k, x_m, x_i, \dots$	sis should be adopted only if there
$x(n), x(k), x(m), x(i), \dots$	are no continuous-time signals in the
	context to avoid ambiguity)
$x[((n-m))_N][33], x((n-m))_N[27]$	Circular shift in $m$ samples within a
	N-samples window

#### 2.2 Common signals

$\delta(t)$	Delta function
$\delta[n], \delta_{i,j}$	Kronecker function $(n = i - j)$
h(t), h[n]	Impulse response (continuous and
	discrete time)
$\tilde{x}[n], \tilde{x}(t)$	Periodic discrete- or continuous-time
	$\operatorname{signal}$
$\hat{x}[n], \hat{x}(t)$	Estimate of $x[n]$ or $x(t)$
$\dot{x}[m]$	Interpolation of $x[n]$

#### 2.3 Common functions

$\mathcal{O}(\cdot), O(\cdot)$	Big-O notation
$\Gamma(\cdot)$	Gamma function
$Q(\cdot)$	Quantization function
$\operatorname{sgn}(\cdot)$	Signum function
$\tanh(\cdot)$	Hyperbolic tangent function

$I_{lpha}(\cdot)$	Modified Bessel function of the first kind and order $\alpha$
$\binom{n}{k}$	Binomial coefficient

## 2.4 Operations and symbols

$f:A\to B$	A function $f$ whose domain is $A$ and codomain is $B$
$\mathbf{f}:A\to\mathbb{R}^n$	A vector-valued function $\mathbf{f}$ , i.e., $n \ge 2$
$\frac{1 \cdot n}{f^n, x^n(t), x^n[k]}$	nth power of the function $f$ , $x[n]$ or
<i>y</i> , (.), []	x(t)
$f^{(n)}, x^{(n)}(t)$	nth derivative of the function $f$ or
	x(t)
$f', f^{(1)}, x'(t)$	1th derivative of the function $f$ or
	x(t)
$f'', f^{(2)}, x''(t)$	2th derivative of the function $f$ or
	x(t)
$\arg\max [x \in \mathcal{A}] f(x)$	Value of $x$ that minimizes $x$
$\arg\min [x \in \mathcal{A}] f(x)$	Value of $x$ that minimizes $x$
$f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$	Infimum, i.e., $f(\mathbf{x}) =$
yea	$\min \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \mathrm{dom}(g) \},\$
	which is the greatest lower bound of
	this set [10]
$f(\mathbf{x}) = \sup_{\mathbf{x}} g(\mathbf{x}, \mathbf{y})$	Supremum, i.e., $f(\mathbf{x}) =$
$\mathbf{y} \in \mathcal{A}$	$\max \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\},\$
	which is the least upper bound of
	this set $[10]$
$f \circ g$	Composition of the functions $f$ and
	g
*	Convolution (discrete or continuous)
	Circular convolution

## 2.5 Digital signal processing

$T_s[27], T[33]$	Sampling period
$f_s, F_s[27]$	Sampling frequency (in Hz or sam-
	ples per secod [27, chapter 3]), i.e.,
	$1/T_s$

f	Continuous linear frequency (in Hz).
	Apparently, there is no notation for
	the discrete linear frequency, we use
	$\omega$ only. However, in [27], the upper-
	case letters $F$ and $\Omega$ are used to de-
	note the continuous-time frequency,
	while the lowercase $f$ and $\omega$ denote
	the discrete-time frequency (Oppen-
	heim [33] does not do it!)
$\Omega$ [27]	Continuous angular frequency (in
	$rad/s$ ), that is, $2\pi f$ .
$\Omega_{\scriptscriptstyle S}$	Sampling frequency (in rad/s), i.e.,
	$2\pi f_s$
ω	Discrete angular frequency, i.e., $\Omega T_s$
	[27, eq (3.27)]. As $\omega$ is also used to
	denote continuous angular frequency
	outside the DSP context, it is always
	convenient to state that it denotes
	the discrete frequency when it does
$W_N$	Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [27]
N	Number of samples in the DFT/FFT
$\mathcal{R}_N[n]$	Rectangular window used to cut off
	the discrete sequences [27]
$\Omega_N$ [33], B	One-sided effective bandwidth of the
	continuous-time signal spectrum
$\omega_s$ [27]	Stop frequency
$\omega_p$ [27]	Pass frequency
$\Delta\omega$ [27]	$\omega_s - \omega_p$
$-\omega_c$ [27]	Cutoff frequency
s(t)	Impulse train
$gdr \left[ H(e^{j\omega}) \right] [33]$	Group delay of $H(e^{j\omega})$
$\angle H(e^{j\omega})$ [33]	Phase response of $H(e^{j\omega})$
$H(e^{j\omega})$ [33]	Magnitude (or gain) of $H(e^{j\omega})$
$x_c(t)$ [33], $x(t)$	Continuous-time signal
$x_s(t)$	Sampled version of $x(t)$ , i.e., $x(t)s(t)$
$x_r(t)$	Reconstruction of $x(t)$ from interpo-
	lation
$\tilde{x}[n]$	Periodic extension of the the aperi-
	odic signal $x[n]$

#### 2.6 Transformations

$\mathcal{F}\left\{\cdot\right\}$ [33, section 2.9]	Fourier transform (FT)

$\overline{\mathrm{DTFT}\left\{\cdot\right\}},\mathrm{DFS}\left\{\cdot\right\},\mathrm{FFT}\left\{\cdot\right\}$	Discrete-time Fourier Transform
	(DTFT), Discrete Fourier Trans-
	form (DFT), Discrete Fourier Series
	(DFS), respectively
$\mathcal{L}\left\{ \cdot \right\}$	Laplace transform
$\overline{\mathcal{Z}\left\{\cdot\right\}}$	z-transform
$\hat{x}(t), \hat{x}[n]$	Hilbert transform of $x(t)$ or $x[n]$
X(s)	Laplace transform of $x(t)$
X(f)	Fourier transform (FT) (in linear fre-
	quency, $Hz$ ) of $x(t)$
$X(j\omega)$	Fourier transform (FT) (in angular
	frequency, rad/sec) of $x(t)$
$X(e^{j\omega})$	Discrete-time Fourier transform
	(DTFT) of $x[n]$
$X[k], X(k), X_k$	Discrete Fourier transform (DFT) or
	fast Fourier transform (FFT) of $x[n]$ ,
	or even the Fourier series (FS) of the
	periodic signal $x(t)$
$\tilde{X}[k], \tilde{X}(k), \tilde{X}_k$	Discrete Fourier series (DFS) of $\tilde{x}[n]$
X(z)	z-transform of $x[n]$

## 3 Probability, statistics, and stochastic processes

#### 3.1 Operators and symbols

$\mathbf{E}\left[\cdot\right],\mathbf{E}\left[\cdot\right]\left[32\right],E\left[\cdot\right],\mathbb{E}\left[\cdot\right]\left[17\right]$	Statistical expectation operator
$\overline{\cdot}$ ], $\mathbf{E}_{u}$ [·] [32], $E_{u}$ [·], $\mathbb{E}_{u}$ [·]	Statistical expectation operator with
	respect to $u$
$\overline{\langle \cdot \rangle}$	Ensemble average
$var [\cdot] [32], VAR[\cdot] [9, 26, 31, 35]$	Variance operator
$\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$	Variance operator with respect to $u$
$cov[\cdot], COV[\cdot]$	Covariance operator [9]
$\operatorname{cov}_{u}[\cdot], \operatorname{COV}_{u}[\cdot]$	Covariance operator with respect to
	и
$\mu_x$	Mean of the random variable $x$
$\mu_x, m_x$	Mean vector of the random variable
	<b>x</b> [12]
$\mu_n$	nth-order moment of a random vari-
	able
$\frac{\sigma_{\chi}^2, \kappa_2}{\mathcal{K}_{\chi}, \mu_4}$	Variance of the random variable $x$
$\mathcal{K}_x, \mu_4$	Kurtosis (4th-order moment) of the
	random variable $x$

$\kappa_n$	nth-order cumulant of a random vari-
	able
$\rho_{x,y}$	Pearson correlation coefficient be-
	tween $x$ and $y$
$a \sim P$	Random variable a with distribution
	P
$\overline{\mathcal{R}}$	Rayleigh's quotient

#### 3.2 Stochastic processes

PS: Estimated terms come with a hat above of it

$r_x(\tau)$ [32], $R_x(\tau)$	Autocorrelation function of the signal
	x(t) or $x[n]$
$S_{x}(f), S_{x}(j\omega)$	Power spectral density (PSD) of $x(t)$
	in linear $(f)$ or angular $(\omega)$ frequency
$S_{x,y}(f), S_{x,y}(j\omega)$	Cross PSD of $x(t)$ and $y(t)$ in linear
	or angular $(\omega)$ frequency
R <sub>x</sub>	(Auto)correlation matrix of $\mathbf{x}(n)$
$r_{x,d}(\tau), R_{x,d}(\tau)$	Cross-correlation between $x[n]$ and
	d[n] or $x(t)$ and $d(t)$ [32]
R <sub>xy</sub>	Cross-correlation matrix of $\mathbf{x}(n)$ and
	$\mathbf{y}(n)$
$\mathbf{r}_{\mathbf{x}d}$ [25], $\mathbf{p}_{\mathbf{x}d}$ [17]	Cross-correlation vector between
	$\mathbf{x}(n)$ and $d(n)$
$c_x(\tau), C_x(\tau)$	Autocovariance function of the signal
	x(t) or $x[n]$ [32]
$C_x, K_x, \Sigma_x, \text{cov}[x]$	(Auto)covariance matrix of <b>x</b> [9, 26,
	31, 35, 42
$\tilde{\mathbf{C}}_{\mathbf{x}}[35]$	Pseudocovariance matrix of <b>x</b>
$c_{xy}(\tau), C_{xy}(\tau)$	Cross-covariance function of the sig-
	$\operatorname{nal} x(t) \text{ or } x[n] \text{ [32]}$
$C_{xy}, K_{xy}, \Sigma_{xy}$	Cross-covariance matrix of <b>x</b> and <b>y</b>

#### 3.3 Functions

$\operatorname{erf}(\cdot)$ Error function [35]
$erfc(\cdot)$ Complementary error function i
$\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x) [35]$
P[A] Probability of the event or set $A$

$p(\cdot), f(\cdot)$	Probability density function (PDF)
	or probability mass function (PMF)
	[31]
$p(x \mid A)$	Conditional PDF or PMF [31]
$F(\cdot)$	Cumulative distribution function
	(CDF)
$\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$	First characteristic function (CF) of
	x [35, 41]
$M_X(t), \Phi_X(-jt), E[e^{tx}]$	Moment-generating function (MGF)
	of $x [35, 41]$
$\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$	Second characteristic function
$K_x(t), \ln E\left[e^{tx}\right], \ln M_x(t)$	Cumulant-generating function
	(CGF) of $x$ [26]

#### 3.4 Distributions

$\mathcal{N}(\mu,\sigma^2)$	Gaussian distribution of a random
	variable with mean $\mu$ and variance $\sigma^2$
$\mathcal{CN}(\mu, \sigma^2)$	Complex Gaussian distribution of a
	random variable with mean $\mu$ and
	variance $\sigma^2$
$\mathcal{N}(\boldsymbol{\mu}, \boldsymbol{\Sigma})$	Gaussian distribution of a vector ran-
	dom variable with mean $\mu$ and co-
	variance matrix $\Sigma$
$\mathcal{CN}(oldsymbol{\mu},oldsymbol{\Sigma})$	Complex Gaussian distribution of a
	vector random variable with mean $\mu$
	and covariance matrix $\Sigma$
$\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$	Uniform distribution from $a$ to $b$
$\chi^2(n), \chi_n^2$	Chi-square distribution with $n$ degree
	of freedom (assuming that the Gaus-
	sians are $\mathcal{N}(0,1)$ )
$\operatorname{Exp}(\lambda)$	Exponential distribution with rate
	parameter $\lambda$
$\Gamma(\alpha,\beta)$	Gamma distribution with shape pa-
	rameter $\alpha$ and rate parameter $\beta$
$\Gamma(\alpha, \theta)$	Gamma distribution with shape pa-
	rameter $\alpha$ and scale parameter $\theta$ =
	$1/\beta$
$\operatorname{Nakagami}(m,\Omega)$	Nakagami-m distribution with shape
	parameter or fading figure $m$ and
	spread, scale, or shape parameter $\Omega$
Rayleigh( $\sigma$ )	Rayleigh distribution with scale pa-
	rameter $\sigma$

$\operatorname{Rayleigh}(\Omega)$	Rayleigh distribution with the second
	moment $\Omega = E[x^2] = 2\sigma^2$
$Rice(s,\sigma)$	Rice distribution with noncentrality
	parameter s and $\sigma$ . $s^2$ represent the
	specular component power
$\operatorname{Rice}(\Omega, K), \operatorname{Rice}(A, K)$	Rice distribution with Rice factor
	$K = s^2/2\sigma^2$ and scale parameter $\Omega =$
	$A = s^{2} + 2\sigma^{2} = 2\sigma^{2}(K+1)$ ( $\Omega$ is pref-
	ered over A)

# 4 Machine learning, optimization theory, and statistical signal processing

#### 4.1 Matrix Calculus (in denominator layout)

PS: Estimated terms come with a hat above of it

$\mathbf{g}, \nabla f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector, used in the steepest descent method, also called gradient descent method or deterministic gradient method.
<b>g</b> if the gradient vector is $\nabla f$ (or $\hat{\mathbf{g}}$ if the gradient vector is $\mathbf{g}$ [25])	Stochastic gradient descent (SGD) vector, i.e., instantaneous approximation of gradient descent vector
$\mathbf{g}_{\mathbf{x}}, \nabla_{\mathbf{w}} f, \frac{\partial f}{\partial \mathbf{w}}$	Gradient descent vector with respect $\mathbf{w}$ [9]
$\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}, \nabla \mathbf{y}^{T} $ [25]	Jacobian matrix.
$ \frac{\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}, \nabla \mathbf{y}^{T} [25]}{\mathbf{H}, \frac{\partial^{2} f}{\partial \mathbf{w}^{2}}, \nabla^{2} f [25], \nabla \nabla f [9]} $	Hessian matrix. The notation $\nabla^2$ is sometimes used in Matrix Calculus to denote the second-order vector derivative. However, it must be avoided since, in Vector Calculus, $\nabla^2$ also denotes the Laplacian operator which in turn may be scalar or vector Laplacian operator depending on whether $f$ is scalar- or vector-valued, respectively. Some discussion about can be found in [5–7]

#### 4.2 Statistics: estimation and detection theory

X	output
W	Parameters
$p(\mathbf{x} \mid \mathbf{w}), l(\mathbf{x} \mid \mathbf{w})[31]$	Likelihood function
$\ln p(\mathbf{x} \mid \mathbf{w})$	Log-likelihood function
$\Lambda(\mathbf{x})[31], \frac{p(\mathbf{x} H_1)}{p(\mathbf{x} H_0)}$ [28, 31], $L(\mathbf{x})$ [13,	Likelihood ratio function (also called
[28]	likelihood ratio test (LRT) [28])
$\Lambda_l(\mathbf{x}), \mathcal{L}(\mathbf{x})$ [13], $l(\mathbf{x})$ [28]	Log-likelihood ratio (LLR [28]) func-
	tion
$\hat{ ho}_{x,y}$	Estimated Pearson correlation coeffi-
	cient between $x$ and $y$
$\overline{\mathcal{R}_k}$	kth Decision region
$x(t) \stackrel{\textit{m.s.e}}{=} y(t)$	x(t) equals $y(t)$ is the mean square er-
	ror sense, that is $E[ x(t) - y(t) ^2] = 0$
$x(t) = 1. i. m. \sum_{i=1}^{N} x_i \phi_i(t) [43]$	$\lim_{N\to\infty} \mathbb{E}\left[\left x(t) - \sum_{i=1}^{N} x_i \phi_i(t)\right ^2\right] = 0$
$N{ ightarrow}\infty$	(l.i.m stands for "limit in the mean").
	It is analogous to the $\stackrel{m.s.e}{=}$ notation,
	but denoting that they equal in the
	MSE sense only when $N \to \infty$
	MIDE School only when $N \to \infty$

## 4.3 Signals, (hyper)parameters, system performance, and criteria

N	Number of instances (or samples),
	i.e., $n \in \{1, 2,, N\}$
$N_{ m trn}$	Number of instances in the training
	set, i.e., $n \in \{1, 2,, N_{\text{trn}}\}$
$N_{ m tst}$	Number of instances in the test set,
	i.e., $n \in \{1, 2, \dots, N_{\text{tst}}\}$
$N_{ m val}$	Number of instances in the validation
	set, i.e., $n \in \{1, 2,, N_{\text{val}}\}$
$N_e$	Number of epochs
$N_a$	Number os attributes
K [25]	Number of classes (which is the num-
	ber of outputs in multiclass prob-
	lems). Use $k$ to iterate over it
L	Number of layers, i.e., the depth of
	the network. Use $l$ to iterate over it

$M_l, m_l$ [25], $J$ [25]	Number of neurons at the $l$ th layer. You might prefer $J$ in the case of the single-layer perceptron (use $j$ to iterate over it). If you want to iterate through it, a sensible variation of Haykin notation is $M_l$ , where $m_l$ can be used as an iterator. $m_0$ is the length of the input vector without the bias.
$\mathbf{x}(n), \mathbf{x}_n$	Input signal (in $\mathbb{R}^{N_a+1}$ )
$x_0(n)$	Dummy input of the bais, which is usually $\pm 1$ . $+1$ is preferred [9, 25].
$\varphi(\cdot)[25], h(\cdot)[9]$	Activation function
$\varphi(\cdot)[25], h(\cdot)[9]$ $\varphi'(v_{m_l}^{(l)}(n))[25], \frac{\partial y_{m_l}^{(l)}(n)}{\partial v_{m_l}^{(l)}(n)} [25]$	Partial derivative of the activation function with respect to $v_{m_l}^{(l)}(n)$ $(m_l$ neuron at $l$ th layer)
$y_{m_l}^{(l)}(n), \varphi\left(v_{m_l}^{(l)}(n)\right)[25], \mathbf{t}_{m_l}^{(l)}(n)[9]$	Output signal (target) of the $m_l$ th neuron at the $l$ th layer
$\mathbf{y}^{(l)}(n)$	Output signal of the <i>l</i> th layer
	Output of the neural network
$\mathbf{d}(n), \mathbf{d}_n$	Desired label (in case of supervised learning). For multiclass classification, one-hot encoding is usually used. For binary (scalar) classification, however antipodal encoding, i.e., {-1,1} is more recommended [25].
$e_{m_l}(n)$	Error signal of the neuron $m_l$ at the
	Ith layer
$\mathbf{e}(n), \mathbf{d}(n) - \mathbf{y}(n)$ $\mathbf{w}_{m_l}^{(I)}(n), \boldsymbol{\theta}_{m_l}^{(I)}(n)$	Error signal
$\mathbf{w}_{m_{l}}^{(I)}(n), \mathbf{\theta}_{m_{l}}^{(I)}(n)$ $\begin{bmatrix} w_{m_{l},0}^{(I)}(n) & w_{m_{l},1}^{(I)}(n) & \dots & w_{m_{l},m_{l-1}}^{(I)}(n) \end{bmatrix}$	Parameters, coefficients, or synaptic weights vector in the <i>l</i> th layer. In the case of Single Layer Perceptrons or adaptive filters, the superscript is
	omitted
$w_{m_l,0}^{(l)}(n), b_{m_l}^{(l)}(n)$	Bias (the first term of the weight vector) of the $l$ th layer
$\mathbf{W}(n), \begin{bmatrix} \mathbf{w}(1) & \mathbf{w}(2) & \cdots & \mathbf{w}(N) \end{bmatrix}^{T}$	Matrix of the synaptic weights
$\widetilde{\mathbf{W}}(n)$	Matrix of the synaptic weights, but without the bias

$v_{m_l}^{(l)}(n), \mathbf{w}_{m_l}^{(l)\top}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$	Induced local field or activation po-
	tential. At the first layer $\mathbf{y}_{m_0}^{(0)}(n) =$
$(I) \leftarrow \sum_{i=1}^{n} (I) \leftarrow (I-1) \leftarrow I$	$\mathbf{x}(n)$ [9]
$\mathbf{v}^{(l)}(n), \mathbf{W}^{(l)}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$	Vector of the local fields at the $l$ th
	layer
$\mathbf{w}^{\star}, \mathbf{w}_{\scriptscriptstyle O}, \mathbf{\theta}^{\star}, \mathbf{\theta}_{\scriptscriptstyle O}$	Optimum value of the parameters,
	coefficients, or synaptic weights vec-
	tor $(\mathbf{w}^*)$ is also used [9] but it is not
	recommended as it may be confused
	with the conjugation operator)
$\delta_{m_l}^{(l)}(n),rac{\partial\mathscr{E}(n)}{\partial  u_{m_l}^{(l)}(n)}$	Local gradient of the $m_l$ th neuron of
$\partial v_{m_l}(n)$	the $l$ th layer.
$\boldsymbol{\delta}^{(l)}(n)$	Vector of the local gradients of all
. ,	neurons at the $l$ th layer
$\mathbf{X}, \begin{bmatrix} \mathbf{x}(1) & \mathbf{x}(2) & \cdots & \mathbf{x}(N) \end{bmatrix}$	Data matrix [25]
$\eta(n)$	Learning rate hyperparameter [25]
$\mathscr{R}$	Bayes risk or average risk [25]
$c_{ij}, C_{ij}$	Misclassification cost in deciding in
<i>ij</i> , <i>i</i> ,	favor of class $\mathscr{C}_i$ (represented in the
	subspace $\mathcal{H}_i$ ) when the $\mathcal{C}_j$ is the true
	class (used in Bayes classifiers/detec-
	tors) [13, 25]
$\mathscr{C}_k[25],  \mathcal{C}_k[9]$	kth class
$ \begin{array}{c c} \mathscr{C}_k[25],  \mathscr{C}_k[9] \\ \mathscr{T}[25],  \mathbb{X}[23] \end{array} $	Training set, i.e., the set $\{\mathbf{x}(n), d(n)\}$
	that is used in the training phase.
$\mathcal{H}_k$	Subspace of the training vector be-
	longing to the class $\mathscr{C}_k$
$\mathcal{H}$	Complete space of the input vector,
	i.e., $\mathcal{H}_1 \cup \mathcal{H}_2 \cup \cdots \mathcal{H}_K$
$\mathscr{X}$ [25]	Set of all vectors in the training,
. ,	batch, validation, or test dataset that
	were misclassified
$\mathscr{E}(\mathbf{w}), \mathscr{E}(\mathbf{w}(n)), \mathscr{E}(n)$	Cost function or objective function
	(the way it is written depends on the
	purpose of the text)
$J(\mathbf{w}), J(\mathbf{w}(n)), J(n)$	Alternative to the cost function
$\Delta \mathcal{E}(\mathbf{w}(n)), \Delta \mathcal{E}(n), \mathcal{E}(\mathbf{w}(n+1)) -$	Cost function or objective function
$\mathcal{E}(\mathbf{w}(n))$	(the way it is written depends on the
	purpose of the text)
$\mathscr{E}_{\mathrm{av}}(\cdot)[25]$	Error energy averaged over the train-
- av ( /[=~]	ing sample or the empirical risk
	compression and compression

$\overline{\rho}$	Distance of the margin of separation
	between two classes (Support Vector
	Machine, SVM)
$g(\cdot)$	Discriminant function, i.e., $g(\mathbf{w}^*) = 0$

## 5 Linear Algebra

#### 5.1 Common matrices and vectors

$\mathbf{W}, \mathbf{D}$	Diagonal matrix
P	Projection matrix; Permutation ma-
	trix
S	Symmetric matrix
J	Jordan matrix
L	Lower matrix
U	Upper matrix; Unitary matrix
C	Cofactor matrix
$\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$	Cofactor matrix of A
S	Symmetric matrix
Q	Orthogonal matrix
$\overline{\mathbf{I}_N}$	$N \times N$ -dimensional identity matrix
$0_{M  imes N}$	$M \times N$ -dimensional null matrix
$0_N$	N-dimensional null vector
$1_{M \times N}$	$M \times N$ -dimensional ones matrix
$\overline{1_N}$	N-dimensional ones vector
0	Null matrix, vector, or tensor (di-
	mensionality understood by context)
1	Ones matrix, vector, or tensor (di-
	mensionality understood by context)

#### 5.2 Indexing

$x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$	Element in the position
	$(i_1, i_2, \ldots, i_N)$ of the tensor $\mathcal{X}$
$\mathcal{X}^{(n)}$	<i>n</i> th tensor of a nontemporal sequence
$\mathbf{x}_n, \mathbf{x}_{:n}$	nth column of the matrix $X$
$\mathbf{x}_{n}$ :	nth row of the matrix $X$
$\mathbf{X}_{i_1,,i_{n-1},:,i_{n+1},,i_N}$	Mode- $n$ fiber of the tensor $\mathcal{X}$
$\mathbf{x}_{:,i_2,i_3}$	Column fiber (mode-1 fiber) of the
	thrid-order tensor $\mathcal{X}$

$X_{i_1,:,i_3}$	Row fiber (mode-2 fiber) of the thrid-
	order tensor $\mathcal{X}$
$X_{i_1,i_2,:}$	Tube fiber (mode-3 fiber) of the
	thrid-order tensor $\mathcal{X}$
$X_{i_1,:,:}$	Horizontal slice of the thrid-order
	tensor $\mathcal{X}$
$X_{:,i_2,:}$	Lateral slices slice of the thrid-order
	tensor $\mathcal{X}$
$X_{i_3}, X_{:,:,i_3}$	Frontal slices slice of the thrid-order
	tensor $\mathcal{X}$

#### 5.3 General operations

$\langle \mathbf{a}, \mathbf{b}  angle  , \mathbf{a}^ op \mathbf{b}, \mathbf{a} \cdot \mathbf{b}$	Inner or dot product
$\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{ op}$	Outer product
$\otimes$	Kronecker product
$\odot$	Hadamard (or Schur) (elementwise)
	product
.⊙n	nth-order Hadamard power
$0.0\frac{1}{n}$	nth-order Hadamard root
0	Hadamard (or Schur) (elementwise)
	riaddinard (or Schar) (cicinentwise)
	division (element liber)
<b>→</b>	, , , , , ,
<u> </u>	division

#### 5.4 Operations with matrices and tensors

$\mathbf{A}^{-1}$	Inverse matrix
$\mathbf{A}^{+},\mathbf{A}^{\dagger}$	Moore-Penrose left pseudoinverse
$\mathbf{A}^{T}, \mathbf{A}^{T}, \mathbf{A}^{t}, \mathbf{A}^{'}$ [38]	Transpose
$\mathbf{A}^{-\top}$	Transpose of the inverse, i.e.,
	$(\mathbf{A}^{-1})^{T} = (\mathbf{A}^{T})^{-1} [22, 34]$
<b>A</b> *	Complex conjugate
A <sup>H</sup>	Hermitian
$\ \mathbf{A}\ _{\mathrm{F}}$	Frobenius norm
$\ \mathbf{A}\ $	Matrix norm
$ \mathbf{A} , \det(\mathbf{A})$	Determinant
$\operatorname{diag}\left(\mathbf{A}\right)$	The elements in the diagonal of <b>A</b>
vec [A]	Vectorization: stacks the columns of
	the matrix <b>A</b> into a long column vec-
	tor

$\overline{\operatorname{vec}_d\left[\mathbf{A}\right]}$	Extracts the diagonal elements of a
	square matrix and returns them in a
	column vector
$\overline{\operatorname{vec}_{l}\left[\mathbf{A}\right]}$	Extracts the elements strictly below
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\operatorname{vec}_{u}\left[\mathbf{A}\right]$	Extracts the elements strictly above
	the main diagonal of a square matrix
	in a column-wise manner and returns
	them into a column vector
$\operatorname{vec}_b\left[\mathbf{A}\right]$	Block vectorization operator: stacks
	square block matrices of the input
	into a long block column matrix
unvec (A)	Reshapes a column vector into a ma-
	trix
$\operatorname{tr}\{\mathbf{A}\}$	trace
$\mathbf{X}_{(n)}$	$n$ -mode matricization of the tensor $\mathcal X$

#### 5.5 Operations with vectors

$\ \mathbf{a}\ $	$l_1$ norm, 1-norm, or Manhattan norm
$\ \mathbf{a}\ , \ \mathbf{a}\ _2$	$l_2$ norm, 2-norm, or Euclidean norm
$\ \mathbf{a}\ _p$	$l_p$ norm, $p$ -norm, or Minkowski norm
$\ \mathbf{a}\ _{\infty}$	$l_{\infty}$ norm, $\infty$ -norm, or Chebyshev
	norm
diag (a)	Diagonalization: a square, diagonal matrix with entries given by the vec-
	$\operatorname{tor} \mathbf{a}$

#### 5.6 Decompositions

Λ	Eigenvalue matrix [40]
Q	Eigenvectors matrix; Orthogonal ma-
	trix of the QR decomposition[40]
R	Upper triangular matrix of the QR
	decomposition[40]
U	Left singular vectors[40]
$\overline{\mathrm{U}_r}$	Left singular nondegenerated vectors
Σ	Singular value matrix
$\Sigma_r$	Singular value matrix with nonzero
	singular values in the main diagonal

$\Sigma^+$	Singular value matrix of the poor
<b>4</b>	Singular value matrix of the pseu-
	doinverse $[40]$
$\Sigma_r^+$	Singular value matrix of the pseu-
	doinverse with nonzero singular val-
	ues in the main diagonal
V	Right singular vectors [40]
$\overline{\mathbf{V}_r}$	Right singular nondegenerated vec-
	tors
$eig(\mathbf{A})$	Set of the eigenvalues of A [14, 31,
	34]
$\llbracket \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots  Vert$	CANDECOMP/PARAFAC (CP) de-
	composition of the tensor $\mathcal{X}$ from the
	outer product of column vectors of <b>A</b> ,
	В, С,
$\llbracket \lambda; \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots  bracket$	Normalized CANDE-
	COMP/PARAFAC (CP) decom-
	position of the tensor $\mathcal{X}$ from the
	outer product of column vectors of
	$A, B, C, \dots$

#### 5.7 Spaces and sets

#### 5.7.1 Common spaces and sets

$\mathbb{R}$	Set of real numbers
a,b	Closed interval of a real set from $a$ to
	b
(a,b)	Opened interval of a real set from $a$
	to b
[a,b),(a,b]	Half-opened intervals of a real set
	from $a$ to $b$
$\mathbb{C}$	Set of complex numbers
$\mathbb{I}, j\mathbb{R}$	Set of imaginary numbers
$\mathbb{Q}$	Set of rational number
$\mathbb{R}\setminus\mathbb{Q}$	Set of irrational number
$\mathbb{Z}$	Set of integer number
N	Set of natural numbers
$\overline{\{1,2,\ldots,n\}}$	Discrete set containing the integer el-
	ements $1, 2, \ldots, n$
$\mathbb{B} = \{0, 1\}$	Boolean set
Ø	Empty set
$\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$	Real or complex space (field)

$\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$	$I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or
779	complex) space
$\mathbb{K}_{+}$	Nonnegative real (or complex) space
	[10]
K <sub>++</sub>	Positive real (or complex) space, i.e.,
	$\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [10]$
$\overline{U}$	Universe
$2^A$	Power set of A

#### 5.7.2 Convex sets (or spaces)

$\mathbb{S}^n$ [16], $\mathcal{S}^n$ [10]	Conic set of the symmetric matrices in $\mathbb{R}^{n \times n}$
$\mathbb{S}^{n\perp}$ [16]	Conic set of the skew-symmetric (also called antisymmetric) matrices in $\mathbb{R}^{n \times n}$
$\mathbb{S}^n_+,\mathcal{S}^n_+$	Conic set of the symmetric positive semidefinite matrices in $\mathbb{R}^{n \times n}$ [10]
$\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$	Conic set of the symmetric positive definite matrices in $\mathbb{R}^{n\times n}$ , i.e., $\mathbb{S}^n_{++} = \mathbb{S}^n_+ \setminus \{0\}$ [10]
$\mathbb{H}^n$	Set of all hermitian matrices in $\mathbb{C}^{n\times n}$
conv C	Convex hull
$\operatorname{aff} C$	Affune hull
$\mathcal{R}$	Ray
$\mathcal{H}$	Hyperplane
$\mathcal{H}_+, \mathcal{H}$	Positive/negative halfspace
$B(\mathbf{x}_c, r)$	Euclidean ball with radium $r$ and
	centered at $\mathbf{x}_c$
$\mathcal{E}$	Ellipsoid
C K	Norm cone
	Proper cone
<i>K</i> *	Dual cone
$\mathcal{P}$	Polyhedra
S	Simplex
$C_{\alpha}$	$\alpha$ -sublevel set
epi $f$	Epigraph of the function $f$
hypo $f$	Hypograph of the function $f$

#### 5.7.3 Spaces from matrices or vectors

$\mathrm{span}\left\{\mathbf{a}_1,\mathbf{a}_2,\ldots,\mathbf{a}_n\right\}$	Vector space spanned by the argu-
	ment vectors [22]
$C(\mathbf{A})$ , columnspace( $\mathbf{A}$ ), range( $\mathbf{A}$ ),	Columnspace, range or image, i.e.,
$\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$	the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$ , where
	$\mathbf{a}_i$ is the ith column vector of the ma-
	$\text{trix } \mathbf{A} \ [32, 40]$
$C(\mathbf{A}^{H})$	Row space (also called left
	columnspace) $[32, 40]$
$N(\mathbf{A})$ , nullspace( $\mathbf{A}$ ), null( $\mathbf{A}$ ), kernel( $\mathbf{A}$	Nullspace (or kernel space) [32, 40,
	41]
$N(\mathbf{A}^{H})$	Left nullspace
rank A	Rank, that is, $\dim(\operatorname{span}\{A\}) =$
	$\dim \left( \mathrm{C} \left( \mathbf{A} \right) \right) \left[ 32 \right]$
nullity (A)	Nullity of $\mathbf{A}$ , i.e., dim $(N(\mathbf{A}))$

#### 5.8 Set operations

A + B	Set addition (Minkowski sum), i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
	[29]
A - B	Minkowski difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$
$A\ominus B$	Pontryagin difference, i.e.,
	$\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} $ [29]
$A \setminus B, A - B$	Set difference or set subtraction, i.e.,
	$A \setminus B = \{x   x \in A \land x \notin B\}$ the set con-
	taining the elements of $A$ that are not
	in $B$ [37]
$A \cup B$	Set of union
$A \cap B$	Set of intersection
$A \times B$	Cartesian product
$A^n$	$A \times A \times \cdots \times A$
	n  times
$A^{\perp}$	Orthogonal complement of $A$ , e.g.,
	$N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [10]$
$a \perp b$	a is orthogonal to b
a ∠ b	a is not orthogonal to b
$A \oplus B$	Direct sum, i.e., each $\mathbf{v} \in$
	$\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a
	unique representation of $\sum \mathbf{a}_i$ with
	$\mathbf{a}_i \in S_i$ . That is, they expand to a
	space. Note that $\{S_i\}$ might not be
	orthogonal each other [22]

$A\overset{\perp}{\oplus} B$	Direct sum of two spaces that are orthogonal and span a $n$ -dimensional
	space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$
	$\mathbb{R}^n$ (this decomposition of $\mathbb{R}^n$ is
	called the orthogonal decomposition
	induced by $\mathbf{A}$ ) [10]
$\overline{A}, A^c$	Complement set (given $U$ )
#A,  A	Cardinality of A
$a \in A$	a is element of A
$a \notin A$	a is not element of A

#### 5.9 Inequalities

$\mathcal{X} \le 0$	Nonnegative tensor
$\mathbf{a} \leq_K \mathbf{b}$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the conic subset $K$ in
	the space $\mathbb{R}^n[10]$
$a <_K b$	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the interior of
	the conic subset $K$ in the space $\mathbb{R}^n[10]$
$a \le b$	Generalized inequality meaning that
	$\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-
	thant conic subset, $\mathbb{R}^n_+$ , in the space
	$\mathbb{R}^n.[10]$
a < b	Strict generalized inequality meaning
	that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-
	thant conic subset, $\mathbb{R}^n_{++}$ , in the space
	$\mathbb{R}^n[10]$
$A \leq_K B$	Generalized inequality meaning that
	${\bf B}-{\bf A}$ belongs to the conic subset $K$
	in the space $\mathbb{S}^n[10]$
$A \prec_K B$	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the interior of
	the conic subset $K$ in the space $\mathbb{S}^n[10]$
$A \leq B$	Generalized inequality meaning that
	$\mathbf{B} - \mathbf{A}$ belongs to the positive semidef-
	inite conic subset, $\mathbb{S}_{+}^{n}$ , in the space
	$\mathbb{S}^n[10]$
A < B	Strict generalized inequality meaning
	that $\mathbf{B} - \mathbf{A}$ belongs to the positive or-
	thant conic subset, $\mathbb{S}_{++}^n$ , in the space
	$\mathbb{S}^n[10]$

## 6 Communication systems

#### 6.1 Common symbols

В	One-sided bandwidth of the base-
	band signal, in Hz
W	One-sided bandwidth of the base-
	band signal, in rad/s
$N_0$	Noise density, in ???
$x_i$	Real or in-phase part of x
$x_q$	Imaginary or quadrature part of $x$
$f_c, f_{RF}$	Carrier frequency (in Hertz)
$f_L$	Carrier frequency in L-band (in
	Hertz)
$\frac{f_{IF}}{f_s}$	Intermediate frequency (in Hertz)
$f_s$	Sampling frequency or sampling rate (in Hertz)
$T_s$	Sampling time interval/duration/pe-
	riod
R	Bit rate
T	Bit interval/duration/period
$T_c$	Chip interval/duration/period
$T_{sy}, T_{sym}$	Symbol/signaling[35] interval/dura-
	tion/period
$S_{RF}$	Transmitted signal in RF
$S_{FI}$	Transmitted signal in FI
$s, s_l$	Lowpass (or baseband) equivalent
	signal or envelope complex of trans-
	mitted signal
$r_{RF}$	Received signal in RF
$r_{FI}$	Received signal in FI
$r, r_l$	Lowpass (or baseband) equivalent
	signal or envelope complex of re-
	ceived signal
$\phi$	Signal phase
$\phi_0$	Initial phase
$\eta_{RF}, w_{RF}$	Noise in RF
$\eta_{FI}, w_{FI}$	Noise in FI
$\eta, w$	Noise in baseband
τ	Timing delay
Δτ	Timing error (delay - estimated)
$\overline{\varphi}$	Phase offset
$\Delta \varphi$	Phase error (offset - estimated)
$f_d$	Linear Doppler frequency
	· · · · · · · · · · · · · · · · · · ·

$\Delta f_d$	Frequency error (Doppler frequency -
	estimated)
ν	Angular Doppler frequency
$\Delta \nu$	Frequency error (Doppler frequency -
	estimated)
$\gamma, A$	Transmitted signal amplitude
$\gamma_0, A_0$	Combined effect of the path loss and
	antenna gain

## 6.2 Fading multipath channels

$t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda \ [35]$	Support temporal of the signal. $\lambda$ is obtained after taking the Fourier transform on $t$ .
$\tau \stackrel{\mathcal{F}}{\leftrightarrow} f$ [35]	Second support temporal of the signal $(c(t))$ varies with with the input at the time $\tau$ ). $f$ is obtained after taking the Fourier transform on $\tau$ .
$c(t,\tau) [35]$	Complex envelope of the channel response at the time $t$ due to an impulse applied at the $t-\tau$
$\frac{C(f,t) [35]}{\alpha(t,\tau) [35]}$	Transfer function of $c(t, \tau)$ in $\tau$
$\alpha(t,\tau) [35]$	Attenuation of $c(t,\tau)$ , i.e., $c(t,\tau) = \alpha(t,\tau)e^{e\pi f_c\tau}$
$R_c(\tau_1, \tau_2, \Delta t) [35]$	Autocorrelation function of $c(t,\tau)$ , i.e., $R_c(\tau_1,\tau_2,\Delta t) = \sum_{c} \left[ c_c^*(t,\tau) \right] c_c^*(t,\tau)$
n (- A) [95]	$ E\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right] $
$R_c(\tau, \Delta t)$ [35]	Autocorrelation function of $c(t, \tau)$ assuming uncorrelated scattering
$R_c(\tau), R_c(\tau, \Delta t)\Big _{\Delta t=0}$ [35]	Multipath intensity profile or delay power spectrum
$R_C(\Delta f, \Delta t), R_C(f_1, f_2; \Delta t),$	Spaced-frequency, spaced-time corre-
$E [C(f_1,t),C(f_2,t+\Delta t)],$ $\mathcal{F}_{\tau} \{R_c(\tau,\Delta t)\} [21]$	lation function $(\Delta f = f_2 - f_1)$
$ \begin{array}{c c} R_C(\Delta f), & R_C(\Delta f, \Delta t) _{\Delta t=0} & [35], \\ \mathcal{F}\left\{R_c(\tau)\right\} & [21] \end{array} $	Spaced-frequency correlation function
$(\Delta f)_c$	Coherence bandwidth of $c(t)$ , that is, the frequency interval in which $R_C(\Delta f)$ is nonzero [35]
$T_m$	Multipath spread of the channel, that is, the time interval in which $R_c(\tau)$ is nonzero $(T_m \approx 1/(\Delta f)_c)$ [35]

$R_C(\Delta t), R_C(\Delta f, \Delta t) _{\Delta f=0}$	Spaced-time correlation function [35]
$S_C(\lambda)$ [35], $\mathcal{F}\left\{R_C(\Delta t)\right\}$ [21]	Doppler power spectrum
$(\Delta t)_c$	Coherence time of $c(t)$ , that is, the
	time interval in which $R_C(\Delta t)$ is
	nonzero [35]
$B_m$	Multipath spread of the channel, that
	is, the frequency interval in which
	$S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$ [35]
$S_C(\tau,\lambda)$ [35], $\mathcal{F}_{\Delta f,\Delta t} \left\{ R_C(\Delta f,\Delta t) \right\}$	Scattering function
[21]	

#### 7 Discrete mathematics

#### 7.1 Quantifiers, inferences

A	For all (universal quantifier) [24]
3	There exists (existential quantifier)
	[24]
∄	There does not exist [24]
∃!	There exists an unique [24]
$\exists_n$	There exists exactly $n$ [37]
€	Belongs to [24]
∉ ::	Does not belong to [24]
:	Because [24]
<u> ,:</u>	Such that, sometimes that parenthe-
	ses is used [24]
$\overline{}$ ,,(·)	Used to separate the quantifier with
	restricted domain from its scope, e.g.,
	$\forall x < 0 (x^2 > 0) \text{ or } \forall x < 0, x^2 > 0$
	[24]
··	Therefore [24]

#### 7.2 Propositional Logic

$\neg a$	Logical negation of $a$ [37]
$a \wedge b$	Conjunction (logical AND) operator
	between $a$ and $b[37]$
$a \lor b$	Disjunction (logical OR) operator be-
	tween $a$ and $b[37]$
$a \oplus b$	Exclusive OR (logical XOR) operator
	between $a$ and $b[37]$

$a \rightarrow b$	Implication (or conditional) state-
	ment[37]
$a \leftrightarrow b$	Bi-implication (or biconditional)
	statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$
	[37]
$a \equiv b, a \iff b, a \Leftrightarrow b$	Logical equivalence, i.e., $a \leftrightarrow b$ is a
	tautology[37]

## 7.3 Operations

a	Absolute value of $a$
log	Base-10 logarithm or decimal loga-
	$\operatorname{rithm}$
ln	Natual logarithm
$\operatorname{Re}\left\{ x\right\}$	Real part of x
$\operatorname{Im}\left\{ x\right\}$	Imaginary part of x
∠.	Phase (complex argument)
$x \mod y$	Remainder, i.e., $x - y \lfloor x/y \rfloor$ , for $y \neq 0$
x div y	Quotient [37]
$x \equiv y \pmod{m}$	Congruent, i.e., $m \setminus (x - y)$ [37]
$\operatorname{frac}(x)$	Fractional part, i.e., $x \mod 1$ [24]
$a \setminus b$ [24, Section 4.1], $a \mid b$ [37]	$b$ is a positive integer multiple of $a \in$
	$\mathbb{Z}$ , i.e., $\exists ! \ n \in \mathbb{Z}_{++} \mid b = na$
a \ b [24, Section 4.1], a \ b [37]	b is not a positive integer multiple of
	$a \in \mathbb{Z}$ , i.e., $\not\exists n \in \mathbb{Z}_{++} \mid b = na$
[·]	Ceiling operation [24]
	Floor operation [24]

#### 8 Vector Calculus

$\nabla f[39]$ , grad $f[36]$	Vector differential operator (Nabla symbol), i.e., $\nabla f$ is the gradient of the scalar-valued function $f$ , i.e., $f$ : $\mathbb{R}^n \to \mathbb{R}$
t,(u,v)	Parametric variables commonly used,
	t for one variable, $(u, v)$ for two vari-
	ables[39]
$l(x, y, z)$ [36], $\mathbf{r}(x, y, z)$ [39], $x\hat{\mathbf{i}} + y\hat{\mathbf{j}} + z\hat{\mathbf{k}}$	Vector position, i.e., $(x, y, z)$ .
$\overline{1(t)}$	Vector position parametrized by $t$ ,
	i.e., $(x(t), y(t), z(t))$ [36, 39]

1/(4) 11 / 14	Time desired:
l'(t), dl/dt	First derivative of $\mathbf{l}(t)$ , i.e., the tangent vector of the curve
	(x(t), y(t), z(t)) [39]
$\mathbf{u}(t)[30] \mathbf{T}(t)[39], dl(t)[36]$	Tangent unit vector of $\mathbf{l}(t)$ , i.e.,
	$\mathbf{u}(t) = \mathbf{l}'(t)/ \mathbf{l}'(t) $
$\mathbf{n}(t), \left(\frac{y'(t)}{ l'(t) }, -\frac{x'(t)}{ l'(t) }\right)$	Normal vector of $\mathbf{l}(t)$ , i.e.,
	$\mathbf{n}(t) \perp \mathbf{T}(t)[39]$
C	Contour that traveled by $\mathbf{l}(t)$ , for $a \leq$
	$t \le b \ [39]$
L, L(C)	Total length of the contour $C$
	(which can be defined the vector
	1, parametrized by $t$ ), i.e., $L_C = \int_0^b  y(t) ^2 dt$
	$\int_{a}^{b}  \mathbf{l}'(t)   \mathrm{d}t [39]$
s(t)	Length of the arc, which can be de-
	fined by the vector $\mathbf{l}$ and $t$ , that is,
ds	$s(t) = \int_{a}^{t}  \mathbf{l}'(u)   \mathrm{d}u  (s(b) = L)[39]$ Differential operator of the length of
us	the contour $C$ , i.e., $ds =  \mathbf{l}'(t)  dt$ [39]
$\int_C f(\mathbf{l})  \mathrm{d}s,  \int_a^b f(\mathbf{l}(t))  \mathbf{l}'(t)   \mathrm{d}t$	Line integral of the function $f: \mathbb{R}^n \to \mathbb{R}^n$
$\int C J \left( \frac{1}{2} \right) \int da J \left$	$\mathbb{R}$ along the contour $C$ . In the context
	of integrals in the complex plane, it
	is also called "contour integral"
$\theta$ [36]	Angle between the contour $C$ and the
- c ch	vector field <b>F</b>
$\int_{\mathcal{C}} \mathbf{F} \cdot d\mathbf{l}, \ \int_{a_{a}}^{b} \mathbf{F}(\mathbf{l}(t)) \cdot \mathbf{l}'(t) dt \ [8, 39],$	Line integral of vector field <b>F</b> along
$\frac{\int_{C} \mathbf{F} \cdot \mathbf{u}  ds, \int_{C} \mathbf{F} \cos (\theta)  ds  [36]}{\int_{C} \mathbf{F} \cdot d\mathbf{u}  [36]}$	the contour $C$
$\int_C \mathbf{F} \cdot d\mathbf{u} \ [36]$	In the field of electromagnetics, it is
	common to apply the line integral be-
	tween the vector field <b>F</b> and the unit
	vector $\mathbf{u}(t)$ . Therefore, this line integral may appear as well
$\int_{2}^{\mathbf{b}} \mathbf{F}, \int_{2}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{l}$	Alternative notation to the line inte-
$J_{\mathbf{a}}$ $\mathbf{r}$ , $J_{\mathbf{a}}$ $\mathbf{r}$ $\mathbf{u}$	gral, where the parametric variable $t$
	goes from $a$ to $b$ , making $r$ goes from
	$\mathbf{l}(a) = \mathbf{a} \text{ to } \mathbf{l}(b) = \mathbf{b} [8]$
$\overline{\phi_C,\phi_C}$	Line integral along the closed contour
-	C. The arrow indicates the contour
	integral orientation, which is counter-
	clockwise, by default. In the context
	of integrals in the complex plane, it is
	also called "closed contour integral".

	$ \#_{S} $	Surface integral over the closed sur-

	vector-valued function, $\mathbf{F}: \mathbb{R}^n \to$
	$\mathbb{R}^n$ ). $\nabla^2$ denotes the scalar (vector)
	Laplacian if the function is scalar-
	valued (vector-valued). The notation
	$\Delta$ must be avoided as it is overused
	in many contexts
	v

## 9 Electromagnetic waves

$\Phi$	Electric flux (scalar) (in V m)
Н	Magnetic field vector (in A/m)
В	Magnetic flux density vector (in
	$Wb/m^2 = T$
$\Phi[15]$	Magnetic flux
$q_{ m f},q_{ m free},Q_{ m free}[19]$	Free electric charge (in C)
$q_{ m b},q_{ m bound},Q_{ m bound}[19]$	Bound electric charge (in C)
$q, q_{\rm f} + q_{\rm b}$	Electric charge (in C)
$\rho_{\rm f}[1], \rho_{\rm free}$ [19]	Free electric charge density
$\rho_{\rm b}[1], \rho_{\rm bound}$ [19]	Electric charge density
$\rho, \rho_{\rm f} + \rho_{\rm b}$	Electric charge density (it can be
	in $C/m^3$ , $C/m^2$ or $C/m$ depending
	whether it is a volume, surface, or
	line shapes)
<b>f</b> [36], <b>F</b> [2]	Electrostatic force (Coulomb force),
	$(\text{in kg m/s}^2).$
ε	Electric permittivity(in F/m). If the
	medium is isotropic, it is a scalar. If
	it is anisotropic, it is a tensor. [36]
$\overline{\varepsilon_r}$	Relative electric permittivity or di-
	electric constant (in F/m) [36]
$\epsilon_0$	Electric permittivity in vacuum,
	$8.854 \times 10^{-12} \mathrm{F/m}$ [36]

E	Electric field vector (in V/m)
$\sigma$	Electric conductivity (in S/m)
J	Electric current density vector (in
	$A/m^2$ )
$\mathbf{J}_m[15]$	Magnetization current density vector
	$(in A/m^2)$
D	Electric flux density, electric dis-
	placement, or electric induction vec-
	$tor (in C/m^2)$
$\overline{U}$	Electric potential energy
$V[3, 15], \Phi[36]$	Electric potential (in voltage, V).
	However, keep in mind that there is
	a subtle difference between both def-
	initions [4]
$\Phi_E[20], \oiint_S \mathbf{E} \mathrm{d}\mathbf{S}$	Electric flux (in V m)
$\Phi_D[19], \varPsi[36], \oiint_S \mathbf{D} \mathrm{d}\mathbf{S}$	Electric flux ( <b>D</b> -field flux)
P	Electric polarization of the material
	$(in C/m^2)$
Χe	Electric susceptibility (for linear and
	isotropic materials)
$\mu$	Magnetic permeability
$\mu_0$	Magnetic permeability in vacuum

## ${\bf 10} \quad {\bf Generic \ mathematical \ symbols}$

■,	Q.E.D.
	Equal by definition
:=,←	Assignment [37]
<b>≠</b>	Not equal
∞	Infinity
i	$\sqrt{-1}$

## 11 Abbreviations

wrt.	With respect to
st.	Subject to
iff.	If and only if
EVD	Eigenvalue decomposition, or eigen-
	decomposition [32]
SVD	Singular value decomposition
CP	CANDECOMP/PARAFAC
