1 Font notation

| $a, b, c, \ldots, A, B, C, \ldots$ | Scalars |
|---|----------|
| a, b, c, \dots | Vectors |
| A, B, C, \dots | Matrices |
| $\mathcal{A}, \mathcal{B}, \mathcal{C}, \dots$ | Tensors |
| $A, B, C, \ldots, A, B, C, \ldots, A, B, C, \ldots$ | Sets |
| test | |

2 Signals and functions

2.1 Time indexing

| x(t) | Continuous-time t |
|---------------------------------|--|
| $x[n],x[k],x[m],x[i],\ldots$ | Discrete-time n, k, m, i, \dots (parenthe- |
| $x_n, x_k, x_m, x_i, \dots$ | sis should be adopted only if there |
| $x(n), x(k), x(m), x(i), \dots$ | are no continuous-time signals in the |
| | context to avoid ambiguity) |
| $x[((n-m))_N], x((n-m))_N$ | Circular shift in m samples within a |
| | N-samples window [11, 17] |

2.2 Common signals

| $\delta(t)$ | Delta function |
|------------------------------|---------------------------------------|
| $\delta[n], \delta_{i,j}$ | Kronecker function $(n = i - j)$ |
| h(t), h[n] | Impulse response (continuous and |
| | discrete time) |
| $\tilde{x}[n], \tilde{x}(t)$ | Periodic discrete- or continuous-time |
| | signal |
| $\hat{x}[n], \hat{x}(t)$ | Estimate of $x[n]$ or $x(t)$ |
| $\dot{x}[m]$ | Interpolation of $x[n]$ |

2.3 Common functions

| $\mathcal{O}(\cdot), O(\cdot)$ | Big-O notation |
|--------------------------------|---------------------------------------|
| $\Gamma(\cdot)$ | Gamma function |
| $Q(\cdot)$ | Quantization function |
| $I_{\alpha}(\cdot)$ | Modified Bessel function of the first |
| | kind and order α |
| $\binom{n}{k}$ | Binomial coefficient |

2.4 Operations and symbols

| $f:A\to B$ | A function f whose domain is A and |
|---|---|
| | codomain is B |
| $\mathbf{f}:A\to\mathbb{R}^n$ | A vector-valued function \mathbf{f} , i.e., $n \geq 2$ |
| $f^n, x^n(t), x^n[k]$ | <i>n</i> th power of the function f , $x[n]$ or |
| | x(t) |
| $f^{(n)}, x^{(n)}(t)$ | nth derivative of the function f or |
| | x(t) |
| $f', f^{(1)}, x'(t)$ | 1th derivative of the function f or |
| | x(t) |
| $f'', f^{(2)}, x''(t)$ | 2th derivative of the function f or |
| | x(t) |
| $ \operatorname{argmax}_{x \in A} f(x) $ | Value of x that minimizes x |
| $ \frac{x \in \mathcal{A}}{\arg\min f(x)} $ $ x \in \mathcal{A} $ | Value of x that minimizes x |
| $f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$ | Infimum, i.e., $f(\mathbf{x}) =$ |
| $\mathbf{y} \in \mathcal{A}$ | $\min \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g) \},\$ |
| | which is the greatest lower bound of |
| | this set [3] |
| $f(\mathbf{x}) = \sup g(\mathbf{x}, \mathbf{y})$ | Supremum, i.e., $f(\mathbf{x}) =$ |
| $\mathbf{y} \in \mathcal{A}$ | $\max \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\}\$ |
| | which is the least upper bound of |
| | this set [3] |
| $f \circ g$ | Composition of the functions f and |
| | g |
| * | Convolution (discrete or continuous) |
| ⊗ , N | Circular convolution [7, 17] |

2.5 Transformations

| W_N | Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [11] |
|--|---|
| $\mathcal{F}\left\{\cdot\right\}$ | Fourier transform |
| $\mathcal{L}\left\{ \cdot \right\}$ | Laplace transform |
| $\overline{\mathcal{Z}\left\{ \cdot \right\}}$ | z-transform |
| $\hat{x}(t), \hat{x}[n]$ | Hilbert transform of $x(t)$ or $x[n]$ |
| X(s) | Laplace transform of $x(t)$ |
| X(f) | Fourier transform (FT) (in linear fre- |
| | quency, Hz) of $x(t)$ |
| $X(j\omega)$ | Fourier transform (FT) (in angular |
| | frequency, rad/sec) of $x(t)$ |
| $X(e^{j\omega})$ | Discrete-time Fourier transform |
| | (DTFT) of $x[n]$ |

| $X[k], X(k), X_k$ | Discrete Fourier transform (DFT) or |
|---|---|
| | fast Fourier transform (FFT) of $x[n]$, |
| | or even the Fourier series (FS) of the |
| | periodic signal $x(t)$ |
| $\tilde{X}[k], \tilde{X}(k), \tilde{X}_k$ | Discrete Fourier series (DFS) of $\tilde{x}[n]$ |
| X(z) | z-transform of $x[n]$ |

3 Probability, statistics, and stochastic processes

3.1 Operators and symbols

| $\mathrm{E}\left[\cdot ight],\mathbf{E}\left[\cdot ight],E\left[\cdot ight]$ | Statistical expectation operator [6, |
|--|---------------------------------------|
| | 16] |
| $E_{u}\left[\cdot\right], \mathbf{E}_{u}\left[\cdot\right], E_{u}\left[\cdot\right], \mathbb{E}_{u}\left[\cdot\right]$ | Statistical expectation operator with |
| | respect to u |
| $\langle \cdot \rangle$ | Ensamble average |
| $\operatorname{var}\left[\cdot\right], \operatorname{VAR}\left[\cdot\right]$ | Variance operator [2, 10, 15, 19] |
| $\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$ | Variance operator with respect to u |
| $cov[\cdot], COV[\cdot]$ | Covariance operator [2] |
| $\operatorname{cov}_{u}\left[\cdot\right], \operatorname{COV}_{u}\left[\cdot\right]$ | Covariance operator with respect to |
| | и |
| μ_{x} | Mean of the random variable x |
| $\mu_{\mathrm{x}}, \mathrm{m}_{\mathrm{x}}$ | Mean vector of the random variable |
| | x [4] |
| μ_n | nth-order moment of a random vari- |
| | able |
| σ_x^2, κ_2 | Variance of the random variable x |
| \mathcal{K}_x, μ_4 | Kurtosis (4th-order moment) of the |
| | random variable x |
| κ_n | nth-order cumulant of a random vari- |
| | able |
| $ ho_{x,y}$ | Pearson correlation coefficient be- |
| | tween x and y |
| $a \sim P$ | Random variable a with distribution |
| | P |
| \mathcal{R} | Rayleigh's quotient |

3.2 Stochastic processes

| $r_{x}(\tau), R_{x}(\tau)$ | Autocorrelation function of the signal |
|----------------------------|--|
| | x(t) or $x[n]$ [16] |
| | |

| $S_x(f), S_x(j\omega)$ | Power spectral density (PSD) of $x(t)$ |
|-------------------------------------|---|
| | in linear (f) or angular (ω) frequency |
| $S_{x,y}(f), S_{x,y}(j\omega)$ | Cross PSD of $x(t)$ and $y(t)$ in linear |
| | or angular (ω) frequency |
| R_{x} | (Auto)correlation matrix of $\mathbf{x}(n)$ |
| $r_{x,d}(\tau), R_{x,d}(\tau)$ | Cross-correlation between $x[n]$ and |
| | d[n] or $x(t)$ and $d(t)$ [16] |
| R_{xy} | Cross-correlation matrix of $\mathbf{x}(n)$ and |
| | $\mathbf{y}(n)$ |
| $\mathbf{p}_{\mathbf{x}d}$ | Cross-correlation vector |
| | between $\mathbf{x}(n)$ and $d(n)$ |
| | $[{ m diniz Adaptive Filtering 1997}]$ |
| $c_x(\tau), C_x(\tau)$ | Autocovariance function of the signal |
| | x(t) or x[n] [16] |
| $C_x, K_x, \Sigma_x, \text{cov}[x]$ | (Auto)covariance matrix of \mathbf{x} [10, 15, |
| | 19, 25] |
| $c_{xy}(\tau), C_{xy}(\tau)$ | Cross-covariance function of the sig- |
| | $\operatorname{nal} x(t) \text{ or } x[n] \text{ [16]}$ |
| $C_{xy}, K_{xy}, \Sigma_{xy}$ | Cross-covariance matrix of ${\bf x}$ and ${\bf y}$ |
| | |

3.3 Functions

| $Q(\cdot)$ | Q-function, i.e., $P[\mathcal{N}(0,1) > x]$ [19] |
|---|---|
| $erf(\cdot)$ | Error function [19] |
| $\operatorname{erfc}(\cdot)$ | Complementary error function i.e., |
| | $\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x) [19]$ |
| P[A] | Probability of the event or set A [15] |
| $p(\cdot), f(\cdot)$ | Probability density function (PDF) |
| | or probability mass function (PMF) |
| | [15] |
| $p(x \mid A)$ | Conditional PDF or PMF [15] |
| $F(\cdot)$ | Cumulative distribution function |
| | (CDF) |
| $\Phi_{X}(\omega), M_{X}(j\omega), E\left[e^{j\omega X}\right]$ | First characteristic function (CF) of |
| | x [19, 24] |
| $M_X(t), \Phi_X(-jt), E[e^{tX}]$ | Moment-generating function (MGF) |
| | of $x [19, 24]$ |
| $\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$ | Second characteristic function |
| $K_x(t)$, $\ln E\left[e^{tx}\right]$, $\ln M_x(t)$ | Cumulant-generating function |
| | (CGF) of x [10] |

3.4 Distributions

| $\mathcal{N}(\mu,\sigma^2)$ | Gaussian distribution of a random variable with mean μ and variance σ^2 |
|---|--|
| $\mathcal{CN}(\mu, \sigma^2)$ | Complex Gaussian distribution of a random variable with mean μ and variance σ^2 |
| $\mathcal{N}(\pmb{\mu},\pmb{\Sigma})$ | Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ |
| $\mathcal{CN}(oldsymbol{\mu}, oldsymbol{\Sigma})$ | Complex Gaussian distribution of a vector random variable with mean μ and covariance matrix Σ |
| $\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi_n^2}$ | Uniform distribution from a to b |
| $\chi^2(n), \chi_n^2$ | Chi-square distribution with n degree of freedom (assuming that the Gaussians are $\mathcal{N}(0,1)$) |
| $\operatorname{Exp}(\lambda)$ | Exponential distribution with rate parameter λ |
| $\Gamma(\alpha, \beta)$ | Gamma distribution with shape parameter α and rate parameter β |
| $\Gamma(\alpha, \theta)$ | Gamma distribution with shape parameter α and scale parameter $\theta = 1/\beta$ |
| $\operatorname{Nakagami}(m,\Omega)$ | Nakagami-m distribution with shape parameter or fading figure m and spread, scale, or shape parameter Ω |
| Rayleigh(σ) | Rayleigh distribution with scale parameter σ |
| $\operatorname{Rayleigh}(\Omega)$ | Rayleigh distribution with the second moment $\Omega = E[x^2] = 2\sigma^2$ |
| $\mathrm{Rice}(s,\sigma)$ | Rice distribution with noncentrality parameter s and σ . s^2 represent the specular component power |
| $\overline{\mathrm{Rice}(A,K)}$ | Rice distribution with Rice factor $K = s^2/2\sigma^2$ and scale parameter $A = s^2 + 2\sigma^2$ |

4 Machine learning, optimization theory, and statistical signal processing

4.1 Derivative terms

| $\mathbf{\nabla} f, \mathbf{g}$ | Gradient descent vector |
|---------------------------------|-------------------------|

| $\nabla_x f, \mathbf{g}_x$ | Gradient descent vector with respect x [2] |
|----------------------------|--|
| J | Jacobian matrix |
| H | Hessian matrix |

4.2 Estimated terms

| \mathbf{g} (or $\hat{\mathbf{g}}$ if the gradient vector is $\mathbf{g})$ | Stochastic gradient descent (SGD), i.e., instantaneous approximation of |
|---|--|
| | gradient descent vector |
| $\hat{x}(t)$ or $\hat{x}[n]$ | Estimate of $x(t)$ or $x[n]$ |
| $\hat{\boldsymbol{\mu}}_{\scriptscriptstyle X},\hat{\mathbf{m}}_{\scriptscriptstyle X}$ | Sample mean of $x[n]$ or $x(t)$ |
| $\frac{\hat{\boldsymbol{\mu}}_{\mathbf{x}}, \hat{\mathbf{m}}_{\mathbf{x}}}{\hat{r}_{x}(\tau), \hat{R}_{x}(\tau)}$ | Sample mean vector of $\mathbf{x}[n]$ or $\mathbf{x}(t)$ |
| $\hat{r}_{x}(au), \hat{R}_{x}(au)$ | Estimated autocorrelation function |
| | of the signal $x(t)$ or $x[n]$ |
| $\hat{S}_{x}(f), \hat{S}_{x}(j\omega)$ | Estimated power spectral density (PSD) of $x(t)$ in linear (f) or angular (ω) frequency |
| $\hat{\mathbf{R}}_{\mathbf{x}}$ | Sample (auto)correlation matrix |
| $\frac{\hat{\mathbf{R}}_{\mathbf{x}}}{\hat{r}_{x,d}(\tau),\hat{R}_{x,d}(\tau)}$ | Estimated cross-correlation between |
| | x[n] and $d[n]$ or $x(t)$ and $d(t)$ |
| $\hat{S}_{x,y}(f), \hat{S}_{x,y}(j\omega)$ | Estimated cross PSD of $x(t)$ and $y(t)$ |
| | in linear or angular (ω) frequency |
| $\hat{\mathbf{R}}_{\mathbf{x}\mathbf{y}}$ | Sample cross-correlation matrix of |
| | $\mathbf{R}_{\mathbf{x}\mathbf{y}}$ |
| $\hat{c}_x(au), \hat{C}_x(au)$ | Estimated autocovariance function of |
| | the signal $x(t)$ or $x[n]$ |
| $\frac{\hat{\mathbf{C}}_{\mathbf{x}}, \hat{\mathbf{K}}_{\mathbf{x}}, \hat{\boldsymbol{\Sigma}}_{\mathbf{x}}}{\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)}$ | Sample (auto)covariance matrix |
| $\hat{c}_{xy}(\tau), \hat{C}_{xy}(\tau)$ | Estimated cross-covariance function |
| | of the signal $x(t)$ or $x[n]$ |
| $\frac{\hat{\mathbf{C}}_{\mathrm{xy}},\hat{\mathbf{K}}_{\mathrm{xy}},\hat{\mathbf{\Sigma}}_{\mathrm{xy}}}{\hat{\mathbf{H}}}$ | Sample cross-covariance matrix |
| Ĥ | Estimate of the Hessian matrix |

4.3 Signals, (hyper)parameters, system performance, and criteria

| $\mathbf{x}(n), \mathbf{x}_n$ | Input signal |
|---|--------------------------------------|
| $\mathbf{y}(n), \mathbf{y}_n$ | Output signal |
| $\hat{\mathbf{y}}(n), \hat{\mathbf{y}}_n$ | Alternative output signal |
| $d(n), d_n$ | Desired label (in case of supervised |
| | learning) |

| $\hat{\mathbf{y}}(n), \hat{\mathbf{y}}_n$ | Alternative desired signal if the out- |
|--|--|
| | put is $\mathbf{y}(n), \mathbf{y}_n$ |
| $\mathbf{w}(n), \mathbf{w}_n, \mathbf{\theta}(n), \mathbf{\theta}_n$ | Parameters, coefficients, or weights |
| | vector |
| $\mathbf{w}_o, \mathbf{w}^{\star}, \mathbf{\theta}_o, \mathbf{\theta}^{\star}$ | Optimum value of the parameters, |
| | coefficients, or weights vector |
| W | Matrix of the weights |
| η | Learning rate hyperparameter |
| $J(\cdot), \mathcal{E}(\cdot)$ | Cost-function or objective function |
| $\Lambda(\cdot)$ | Likelihood function |
| $\Lambda_l(\cdot)$ | Log-likelihood function |
| $\hat{ ho}_{x,y}$ | Estimated Pearson correlation coeffi- |
| • | cient between x and y |
| ρ | Distance of the margin of separation |
| | between two classes (Support Vector |
| | Machine, SVM) |
| $g(\cdot)$ | Discriminant function, i.e., $g(\mathbf{w}^*) = 0$ |
| | |

5 Linear Algebra

5.1 Common matrices and vectors

| \mathbf{W}, \mathbf{D} | Diagonal matrix |
|--|---|
| P | Projection matrix; Permutation ma- |
| | trix |
| J | Jordan matrix |
| L | Lower matrix |
| U | Upper matrix |
| $\overline{\mathbf{C}}$ | Cofactor matrix |
| $\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$ | Cofactor matrix of A |
| S | Symmetric matrix |
| Q | Orthogonal matrix |
| $\overline{\mathbf{I}_N}$ | $N \times N$ -dimensional identity matrix |
| $0_{M 	imes N}$ | $M \times N$ -dimensional null matrix |
| 0_N | N-dimensional null vector |
| $1_{M 	imes N}$ | $M \times N$ -dimensional ones matrix |
| $\overline{1_N}$ | N-dimensional ones vector |
| 0 | Null matrix, vector, or tensor (di- |
| | mensionality understood by context) |
| 1 | Ones matrix, vector, or tensor (di- |
| | mensionality understood by context) |
| | |

5.2 Indexing

| $x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$ | Element in the position |
|--|---|
| 2,2, ,1, | (i_1, i_2, \ldots, i_N) of the tensor \mathcal{X} |
| $\mathcal{X}^{(n)}$ | nth tensor of a nontemporal sequence |
| $\mathbf{x}_n, \mathbf{x}_{:n}$ | nth column of the matrix X |
| X_{n} : | nth row of the matrix X |
| $\mathbf{x}_{i_1,\ldots,i_{n-1},:,i_{n+1},\ldots,i_N}$ | Mode- n fiber of the tensor \mathcal{X} |
| $\mathbf{x}_{:,i_2,i_3}$ | Column fiber (mode-1 fiber) of the |
| | thrid-order tensor \mathcal{X} |
| $\mathbf{x}_{i_1,:,i_3}$ | Row fiber (mode-2 fiber) of the thrid- |
| | order tensor \mathcal{X} |
| $X_{i_1,i_2,:}$ | Tube fiber (mode-3 fiber) of the |
| | thrid-order tensor \mathcal{X} |
| $X_{i_1,:,:}$ | Horizontal slice of the thrid-order |
| | tensor \mathcal{X} |
| $X_{:,i_2,:}$ | Lateral slices slice of the thrid-order |
| | tensor \mathcal{X} |
| $X_{i_3}, X_{:,:,i_3}$ | Frontal slices slice of the thrid-order |
| | tensor \mathcal{X} |

5.3 General operations

| $\langle \mathbf{a}, \mathbf{b} angle$, $\mathbf{a}^{T} \mathbf{b}$, $\mathbf{a} \cdot \mathbf{b}$ | Inner or dot product |
|---|-----------------------------------|
| $\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{	op}$ | Outer product |
| ⊗ | Kronecker product |
| · · | Hadamard (or Schur) (elementwise) |
| | product |
| .⊙n | nth-order Hadamard power |
| $0.00 \frac{1}{n}$ | nth-order Hadamard root |
| Ø | Hadamard (or Schur) (elementwise) |
| | division |
| ♦ | Khatri-Rao product |
| 8 | Kronecker Product |
| \times_n | <i>n</i> -mode product |

5.4 Operations with matrices and tensors

| \mathbf{A}^{-1} | Inverse matrix |
|---------------------------------------|----------------------------------|
| $\mathbf{A}^{+},\mathbf{A}^{\dagger}$ | Moore-Penrose left pseudoinverse |
| $\mathbf{A}^{	op}$ | Transpose |

| $\mathbf{A}^{-	op}$ | Transpose of the inverse, i.e., |
|---|---|
| | $(\mathbf{A}^{-1})^{\top} = (\mathbf{A}^{\top})^{-1} [8, 18]$ |
| \mathbf{A}^* | Complex conjugate |
| \mathbf{A}^H | Hermitian |
| $\ \mathbf{A}\ _{\mathrm{F}}$ | Frobenius norm |
| A | Matrix norm |
| $ \mathbf{A} , \det(\mathbf{A})$ | Determinant |
| $\operatorname{diag}\left(\mathbf{A}\right)$ | The elements in the diagonal of A |
| E [A] | Vectorization: stacks the columns of |
| | the matrix \mathbf{A} into a long column vec- |
| | tor |
| $\mathbf{E}_d\left[\mathbf{A}\right]$ | Extracts the diagonal elements of a |
| | square matrix and returns them in a |
| | column vector |
| $\mathbf{E}_{l}\left[\mathbf{A} ight]$ | Extracts the elements strictly below |
| | the main diagonal of a square matrix |
| | in a column-wise manner and returns |
| | them into a column vector |
| $\mathbf{E}_{u}\left[\mathbf{A}\right]$ | Extracts the elements strictly above |
| | the main diagonal of a square matrix |
| | in a column-wise manner and returns |
| | them into a column vector |
| $\mathbf{E}_b\left[\mathbf{A} ight]$ | Block vectorization operator: stacks |
| | square block matrices of the input |
| | into a long block column matrix |
| $\operatorname{unvec}\left(\mathbf{A}\right)$ | Reshapes a column vector into a ma- |
| | trix |
| tr{ A } | trace |
| $X_{(n)}$ | n -mode matricization of the tensor $\mathcal X$ |

5.5 Operations with vectors

| $\ \mathbf{a}\ $ | l_1 norm, 1-norm, or Manhatan norm |
|------------------------------------|---|
| $\ \mathbf{a}\ , \ \mathbf{a}\ _2$ | l_2 norm, 2-norm, or Euclidean norm |
| $\ \mathbf{a}\ _p$ | l_p norm, p -norm, or Minkowski norm |
| $\ \mathbf{a}\ _{\infty}$ | l_{∞} norm, ∞ -norm, or Chebyshev |
| | norm |
| diag (a) | Diagonalization: a square, diagonal |
| | matrix with entries given by the vec- |
| | tor a |

5.6 Decompositions

| Λ | Eigenvalue matrix [23] |
|--|--|
| Q | Eigenvectors matrix; Orthogonal ma- |
| | trix of the QR decomposition[23] |
| R | Upper triangular matrix of the QR |
| | decomposition[23] |
| U | Left singular vectors[23] |
| $\frac{\mathrm{U}_r}{\Sigma}$ | Left singular nondegenerated vectors |
| | Singular value matrix |
| Σ_r | Singular value matrix with nonzero |
| | singular values in the main diagonal |
| Σ^+ | Singular value matrix of the pseu- |
| | doinverse [23] |
| Σ_r^+ | Singular value matrix of the pseu- |
| | doinverse with nonzero singular val- |
| | ues in the main diagonal |
| V | Right singular vectors [23] |
| $\overline{\mathbf{V}_r}$ | Right singular nondegenerated vec- |
| | tors |
| $\operatorname{eig}\left(\mathbf{A} ight)$ | Set of the eigenvalues of A [5, 15, 18] |
| $\llbracket A, B, C, \ldots bracket$ | CANDECOMP/PARAFAC (CP) de- |
| | composition of the tensor \mathcal{X} from the |
| | outer product of column vectors of A , |
| | $\mathbf{B},\mathbf{C},\dots$ |
| $\boxed{\llbracket \boldsymbol{\lambda}; \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots \rrbracket}$ | Normalized CANDE- |
| | COMP/PARAFAC (CP) decom- |
| | position of the tensor \mathcal{X} from the |
| | outer product of column vectors of |
| | A, B, C, \dots |

5.7 Spaces and sets

| $\mathrm{span}\left\{\mathbf{a}_1,\mathbf{a}_2,\ldots,\mathbf{a}_n\right\}$ | Vector space spanned by the argument vectors [8] |
|--|--|
| $C(\mathbf{A})$, columnspace(\mathbf{A}), range(\mathbf{A}), span { \mathbf{A} }, image(\mathbf{A}) | Columnspace, range or image, i.e., the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$, where \mathbf{a}_i is the ith column vector of the ma- |
| | trix A [16, 23] |
| $C(\mathbf{A}^{H})$ | Row space (also called left columnspace) [16, 23] |
| $N(\mathbf{A})$, nullspace(\mathbf{A}), null(\mathbf{A}), kernel(\mathbf{A}) | Nullspace (or kernel space) [16, 23, 24] |
| $N(\mathbf{A}^{H})$ | Left nullspace |
| rank A | Rank, that is, $\dim(\operatorname{span}\{A\}) = \dim(\operatorname{C}(A))$ [16] |

| nullity (A) | Nullity of \mathbf{A} , i.e., dim $(N(\mathbf{A}))$ |
|--|---|
| $\{1,2,\ldots,n\}$ | Discrete set containing the integer el- |
| | ements $1, 2, \ldots, n$ |
| U | Universe |
| 2^A | Power set of A |
| \mathbb{R} | Set of real numbers |
| C | Set of complex numbers |
| \mathbb{Z} | Set of integer number |
| $\mathbb{B} = \{0, 1\}$ | Boolean set |
| Ø | Empty set |
| N | Set of natural numbers |
| $\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$ | Real or complex space (field) |
| $\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$ | $I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or |
| | complex) space |
| K + | Nonnegative real (or complex) space |
| | [3] |
| K++ | Positive real (or complex) space, i.e., |
| | $\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} [3]$ |
| $\mathbb{S}^n, \mathcal{S}^n$ | Conic set of the symmetric matrices |
| | in $\mathbb{R}^{n \times n}$ [3] |
| $\mathbb{S}^n_+, \mathcal{S}^n_+$ | Conic set of the symmetric positive |
| | semidefinite matrices in $\mathbb{R}^{n \times n}$ [3] |
| $\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$ | Conic set of the symmetric positive |
| | definite matrices in $\mathbb{R}^{n\times n}$, i.e., \mathbb{S}^n_{++} = |
| | $\mathbb{S}^n_+ \setminus \{0\} \ [3]$ |
| \mathbb{H}^n | Set of all hermitian matrices in $\mathbb{C}^{n\times n}$ |
| [a,b] | Closed interval of a real set from a to |
| | b |
| (a,b) | Opened interval of a real set from a |
| | to b |
| [a,b),(a,b] | Half-opened intervals of a real set |
| | from a to b |
| $\operatorname{conv} C$ | Convex hull |
| $\operatorname{aff} C$ | Affune hull |
| \mathcal{R} | Ray |
| \mathcal{H} | Hyperplane |
| $\mathcal{H}_+, \mathcal{H}$ | Positive/negative halfspace |
| $B(\mathbf{x}_c, r)$ | Euclidean ball with radium r and |
| | centered at \mathbf{x}_c |
| \mathcal{E} | Ellipsoid |
| С | Norm cone |
| K | Proper cone |
| <i>K</i> * | Dual cone |
| | |

| \mathcal{P} | Polyhedra |
|---------------|-------------------------------|
| S | Simplex |
| C_{α} | α -sublevel set |
| epi f | Epigraph of the function f |
| hypo f | Hypograph of the function f |

5.8 Set operations

| A + B | Set addition (Minkowski sum), i.e., |
|---|---|
| | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$ [13] |
| A-B | Minkowski difference, i.e., |
| | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$ |
| $A\ominus B$ | Pontryagin difference, i.e., |
| | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} $ [13] |
| $A \setminus B, A - B$ | Set difference or set subtraction, i.e., |
| | $A \setminus B = \{x x \in A \land x \notin B\}$ the set con- |
| | taining the elements of A that are not |
| | in B [21] |
| $A \cup B$ | Set of union |
| $A \cap B$ | Set of intersection |
| $A \times B$ | Cartesian product |
| A^n | $A \times A \times \cdots \times A$ |
| | n times |
| A^{\perp} | Orthogonal complement of A , e.g., |
| | $N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [3]$ |
| $\mathbf{a} \perp \mathbf{b}$ | a is orthogonal to b |
| a ⊥ b | ${f a}$ is not orthogonal to ${f b}$ |
| $A \oplus B$ | Direct sum, i.e., each $\mathbf{v} \in$ |
| | $\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a |
| | unique representation of $\sum \mathbf{a}_i$ with |
| | $\mathbf{a}_i \in S_i$. That is, they expand to a |
| | space. Note that $\{S_i\}$ might not be |
| | orthogonal each other [8] |
| $A \stackrel{ ightharpoonup}{\oplus} B$ | Direct sum of two space that are or- |
| | thogonal and span a <i>n</i> -dimensional |
| | space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$ |
| | \mathbb{R}^n (this decomposition of \mathbb{R}^n is |
| | called the orthogonal decomposition |
| | induced by \mathbf{A}) [3] |
| \bar{A}, A^c | Complement set (given U) |
| #A, A | Cardinality |

| $a \in A$ | a is element of A |
|--------------|-----------------------|
| $a \notin A$ | a is not element of A |

5.9 Inequalities

| $\mathcal{X} \leq 0$ | Nonnegative tensor |
|---------------------------------|--|
| $\mathbf{a} \leq_K \mathbf{b}$ | Generalized inequality meaning that |
| | $\mathbf{b} - \mathbf{a}$ belongs to the conic subset K in |
| | the space $\mathbb{R}^n[3]$ |
| $\mathbf{a} \prec_K \mathbf{b}$ | Strict generalized inequality meaning |
| | that $\mathbf{b} - \mathbf{a}$ belongs to the interior of |
| | the conic subset K in the space $\mathbb{R}^n[3]$ |
| $a \le b$ | Generalized inequality meaning that |
| | $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or- |
| | thant conic subset, \mathbb{R}^n_+ , in the space |
| | \mathbb{R}^n .[3] |
| a < b | Strict generalized inequality meaning |
| | that $\mathbf{b} - \mathbf{a}$ belongs to the positive or- |
| | thant conic subset, \mathbb{R}^n_{++} , in the space |
| | $\mathbb{R}^n[3]$ |
| $\mathbf{A} \leq_K \mathbf{B}$ | Generalized inequality meaning that |
| | ${\bf B}-{\bf A}$ belongs to the conic subset K |
| | in the space $\mathbb{S}^n[3]$ |
| $A \prec_K B$ | Strict generalized inequality meaning |
| | that $\mathbf{B} - \mathbf{A}$ belongs to the interior of |
| | the conic subset K in the space $\mathbb{S}^n[3]$ |
| $A \leq B$ | Generalized inequality meaning that |
| | $\mathbf{B} - \mathbf{A}$ belongs to the positive semidef- |
| | inite conic subset, \mathbb{S}_{+}^{n} , in the space |
| | $\mathbb{S}^n[3]$ |
| A < B | Strict generalized inequality meaning |
| | that $\mathbf{B} - \mathbf{A}$ belongs to the positive or- |
| | thant conic subset, \mathbb{S}_{++}^n , in the space |
| | $\mathbb{S}^n[3]$ |

6 Communication systems

6.1 Symbols

| B | One-sided bandwidth of the trans- |
|---|-----------------------------------|
| | mitted signal, in Hz |

| \overline{W} | One-sided bandwidth of the trans- |
|---------------------|--------------------------------------|
| | mitted signal, in rad/s |
| $\overline{x_i}$ | Real or in-phase part of x |
| x_q | Imaginary or quadrature part of x |
| f_c, f_{RF} | Carrier frequency (in Hertz) |
| $\frac{f_L}{f_L}$ | Carrier frequency in L-band (in |
| JL | Hertz) |
| f_{IF} | Intermediate frequency (in Hertz) |
| f_s | Sampling frequency or sampling rate |
| | (in Hertz) |
| T_s | Sampling time interval/duration/pe- |
| | riod |
| R | Bit rate |
| T | Bit interval/duration/period |
| T_c | Chip interval/duration/period |
| T_{sy}, T_{sym} | Symbol/signaling[19] interval/dura- |
| | tion/period |
| S_{RF} | Transmitted signal in RF |
| S_{FI} | Transmitted signal in FI |
| S, S_l | Lowpass (or baseband) equivalent |
| | signal or envelope complex of trans- |
| | mitted signal |
| r_{RF} | Received signal in RF |
| r_{FI} | Received signal in FI |
| r, r_l | Lowpass (or baseband) equivalent |
| | signal or envelope complex of re- |
| | ceived signal |
| $\overline{\phi}$ | Signal phase |
| ϕ_0 | Initial phase |
| η_{RF}, w_{RF} | Noise in RF |
| η_{FI}, w_{FI} | Noise in FI |
| η , w | Noise in baseband |
| τ | Timing delay |
| $\Delta 	au$ | Timing error (delay - estimated) |
| arphi | Phase offset |
| $\Delta arphi$ | Phase error (offset - estimated) |
| f_d | Linear Doppler frequency |
| Δf_d | Frequency error (Doppler frequency - |
| | estimated) |
| ν | Angular Doppler frequency |
| $\Delta \nu$ | Frequency error (Doppler frequency - |
| | estimated) |
| γ, A | Transmitted signal amplitude |
| | |

| γ_0, A_0 | Combined effect of the path loss and |
|-----------------|--------------------------------------|
| | antenna gain |

6.2 Fading multipath channels

| $ \begin{array}{c} \tau \overset{\mathcal{F}}{\leftrightarrow} f & \text{Second support temporal of the signal } (c(t) \text{ varies with with the input at the time } \tau). \ f \text{ is obtained after taking the Fourier transform on } \tau. \\ c(t,\tau) & \text{Complex envelope of the channel response at the time } t \text{ due to an impulse applied at the } t-\tau \\ \hline C(f,t) & \text{Transfer function of } c(t,\tau) \text{ in } \tau \\ \alpha(t,\tau) & \text{Attenuation of } c(t,\tau), \text{ i.e., } c(t,\tau) = \\ \alpha(t,\tau)e^{e\pi f_c\tau} \\ \hline R_c(\tau_1,\tau_2,\Delta t) & \text{Autocorrelation function of } c(t,\tau_1), \text{ i.e., } R_c(\tau_1,\tau_2,\Delta t) = \\ E\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right] \\ R_c(\tau,\Delta t) & \text{Autocorrelation function of } c(t,\tau) \text{ assuming uncorrelated scattering} \\ R_c(\tau),R_c(\tau,\Delta t)\Big _{\Delta t=0} & \text{Multipath intensity profile or delay power spectrum} \\ R_C(\Delta f,\Delta t),R_C(f_1,f_2;\Delta t), & \text{Spaced-frequency, spaced-time correlation function } (\Delta f=f_2-f_1) \\ F_{\tau}\left\{R_c(\tau,\Delta t)\right\} \\ R_C(\Delta f),R_C(\Delta f,\Delta t)\Big _{\Delta t=0},F\left\{R_c(\tau)\right\} & \text{Spaced-frequency correlation function} \\ (\Delta f)_c & \text{Coherence bandwidth of } c(t), \text{ that is, the frequency interval in which } R_C(\Delta f) \text{ is nonzero} \\ T_m & \text{Multipath spread of the channel, that is, the time interval in which } R_c(\tau) \text{ is nonzero} \\ C_{C}(\Delta f),R_C(\Delta f,\Delta t)\Big _{\Delta f=0} & \text{Spaced-time correlation function} \\ S_C(\lambda),\mathcal{F}\left\{R_C(\Delta t)\right\} & \text{Doppler power spectrum} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) \text{ is nonzero} \\ C_{Oherence time of } c(t), \text{ that is, the time interval in which } R_C(\Delta t) is $ | $t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda$ | Support temporal of the signal. λ is obtained after taking the Fourier transform on t . |
|--|---|---|
| | $\tau \stackrel{\mathcal{F}}{\leftrightarrow} f$ | nal $(c(t))$ varies with with the input at the time τ). f is obtained after |
| $\begin{array}{c ccccccccccccccccccccccccccccccccccc$ | c(t,	au) | sponse at the time t due to an impulse |
| $\begin{array}{c ccccccccccccccccccccccccccccccccccc$ | C(f,t) | Transfer function of $c(t, \tau)$ in τ |
| $R_c(\tau_1,\tau_2,\Delta t) \qquad \text{Autocorrelation function of } c(t,\tau), \text{i.e.,} R_c(\tau_1,\tau_2,\Delta t) = \\ \text{E}\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right] \qquad \\ R_c(\tau,\Delta t) \qquad \text{Autocorrelation function of } c(t,\tau) \text{ assuming uncorrelated scattering} \\ R_c(\tau),R_c(\tau,\Delta t)\Big _{\Delta t=0} \qquad \text{Multipath intensity profile or delay power spectrum} \\ R_C(\Delta f,\Delta t),R_C(f_1,f_2;\Delta t), \qquad \text{Spaced-frequency, spaced-time correlation function } (\Delta f=f_2-f_1) \\ \mathcal{F}_{\tau}\{R_c(\tau,\Delta t)\} \qquad \qquad \text{Spaced-frequency correlation function} \\ (\Delta f)_c \qquad \qquad \text{Coherence bandwidth of } c(t), \text{ that is, the frequency interval in which } \\ R_C(\Delta f),R_C(\Delta f,\Delta t)\Big _{\Delta t=0}, \mathcal{F}\{R_c(\tau)\} \qquad \text{Spaced-frequency interval in which } \\ R_C(\Delta f) \text{ is nonzero} \\ T_m \qquad \qquad \text{Multipath spread of the channel, that is, the time interval in which } \\ R_C(\Delta t),R_C(\Delta f,\Delta t)\Big _{\Delta f=0} \qquad \text{Spaced-time correlation function} \\ S_C(\lambda),\mathcal{F}\{R_C(\Delta t)\} \qquad \text{Doppler power spectrum} \\ (\Delta t)_c \qquad \qquad \text{Coherence time of } c(t), \text{ that is, the time interval in which } \\ R_C(\Delta t) \text{ is moder} \end{aligned}$ | | |

| time interval in which $R_C(\Delta t)$ is | | |
| | $(\Delta t)_c$ | time interval in which $R_C(\Delta t)$ is |

| B_m | Multipath spread of the channel, that |
|--|--|
| | is, the frequency interval in which |
| | $S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$ |
| $S_C(\tau,\lambda), \mathcal{F}_{\Delta f,\Delta t} \left\{ R_C(\Delta f,\Delta t) \right\}$ | Scattering function |

7 Discrete mathematics

7.1 Quantifiers, inferences

| A | For all (universal quantifier) [9] |
|------------------------|--|
| 3 | There exists (existential quantifier) |
| | [9] |
| <u></u> ∄ ∃! | There does not exist [9] |
| | There exist an unique [9] |
| € | Belongs to [9] |
| <u>∉</u> ∵ | Does not belong to [9] |
| :: | Because [9] |
| <u> ,:</u> | Such that, sometimes that paranthe- |
| | ses is used [9] |
| $\overline{},,(\cdot)$ | Used to separate the quantifier with |
| | restricted domain from the its scope, |
| | e.g., $\forall x < 0 (x^2 > 0)$ or $\forall x < 0$ |
| | $0, x^2 > 0$ [9] |
| ·: | Therefore [9] |

7.2 Propositional Logic

| $\neg a$ | Logical negation of a [21] |
|---|--|
| $a \wedge b$ | Conjunction (logical AND) operator |
| | between a and $b[21]$ |
| $a \lor b$ | Disjunction (logical OR) operator be- |
| | tween a and $b[21]$ |
| $a \oplus b$ | Exclusive OR (logical XOR) operator |
| | between a and $b[21]$ |
| $a \rightarrow b$ | Implication (or conditional) state- |
| | ment[21] |
| $a \leftrightarrow b$ | Bi-implication (or biconditional) |
| | statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$ |
| | [21] |
| $a \equiv b, a \iff b, a \Leftrightarrow b$ | Logical equivalence, i.e., $a \leftrightarrow b$ is a |
| | tautology[21] |

7.3 Operations

| a | Absolute value of a |
|--------------------------------------|---|
| log | Base-10 logarithm or decimal loga- |
| | rithm |
| ln | Natual logarithm |
| $\operatorname{Re}\left\{ x\right\}$ | Real part of x |
| $\operatorname{Im}\left\{ x\right\}$ | Imaginary part of x |
| ۲٠ | Phase (complex argument) |
| $x \mod y$ | Remainder, i.e., $x - y \lfloor x/y \rfloor$, for $y \neq 0$ |
| x div y | Quotient [21] |
| $x \equiv y \pmod{m}$ | Congruent, i.e., $m \setminus (x - y)$ [21] |
| frac(x) | Fractional part, i.e., $x \mod 1$ [9] |
| $a \setminus b, a \mid b$ | b is a positive integer multiple of a , |
| | i.e., $\exists \ n \in \mathbb{Z}_{++} \mid b = na \ [9, \ 21]$ |
| $a \not\setminus b, a \not\mid b$ | b is not a positive integer multiple of |
| | $a, \text{ i.e., } \not\exists n \in \mathbb{Z}_{++} \mid b = na \ [9, 21]$ |
| [·] | Ceiling operation [9] |
| [·] | Floor operation [9] |

8 Electromagnetic waves

| Electric flux (scalar) (in V m) |
|---------------------------------------|
| Electric current density vector (in |
| A/m^2) |
| Magnetic field vector (in A/m) |
| Magnetic flux density vector (in |
| $Wb/m^2 = T$ |
| Electric charge strength/magnitude |
| (in C) |
| Electric charge density (for volumes) |
| (in C/m^3) |
| Electric charge density (for surface) |
| (in C/m^2) |
| Electric charge density (for volumes) |
| (in C/m) |
| Electrostatic force (Coulomb force), |
| (in kg m/s^2) |
| Electric permittivity(in F/m) [20] |
| Relative electric permittivity or di- |
| electric constant (in F/m) [20] |
| |

| $\overline{\varepsilon_0}$ | Electric permittivity in vacuum, |
|----------------------------|---|
| | $8.854 \times 10^{-12} \mathrm{F/m}$ [20] |
| E | Electric field vector (in V/m) |
| D | Electric flux density, electric dis- |
| | placement, or electric induction vec- |
| | tor (in C/m^2) |
| P | Electric polarization of the material |
| | $(in C/m^2)$ |
| Χe | Electric susceptibility (for linear and |
| | isotropic materiais) |
| μ | Magnetic permeability |
| $\frac{\mu_0}{\mu_0}$ | Magnetic permeability in vacuum |

9 Calculus

| abla | Vector differential operator (Nabla symbol), i.e., ∇f is the gradient of the scalar-valued function f , i.e., f : $\mathbb{R}^n \to \mathbb{R}$ |
|---|---|
| t,(u,v) | Parametric variables commonly used, |
| | t for one variable, (u, v) for two vari- |
| | ables[22] |
| $\mathbf{r}(t)$ | Vector position $(x(t), y(t), z(t))$ |
| | parametrized by $t[22]$ |
| $\mathbf{r}'(t)$ | First derivative of $\mathbf{r}(t)$, i.e., |
| | the tangent vector of the curve |
| | (x(t), y(t), z(t)) [22] |
| $\mathbf{T}(t),\mathbf{u}(t)$ | Tangent unit vector of $\mathbf{r}(t)$, i.e., |
| | $\mathbf{u}(t) = \mathbf{r}'(t)/ \mathbf{r}'(t) [14, 22]$ |
| $\mathbf{n}(t), \left(\frac{y'(t)}{ \mathbf{r}'(t) }, -\frac{x'(t)}{ \mathbf{r}'(t) }\right)$ | Normal vector of $\mathbf{r}(t)$, i.e., |
| <u> </u> | $\mathbf{n}(t) \perp \mathbf{T}(t)[22]$ |
| C | Contour that traveled by $\mathbf{r}(t)$, for $a \leq t$ |
| 1.1(0) | $t \le b \ [22]$ |
| L, L(C) | Total length of the contour C |
| | (which can be defined the vector |
| | \mathbf{r} , parametrized by t), i.e., $L_C =$ |
| | $\int_a^b \mathbf{r}'(t) \mathrm{d}t[22]$ |
| s(t) | Length of the arc, which can be de- |
| | fined by the vector \mathbf{r} and t , that is, |
| | $s(t) = \int_a^t \mathbf{r}'(u) \mathrm{d}u \ (s(b) = L)[22]$ |

| $\mathrm{d}s$, $\mathrm{d}l$ | Differential operator of the length of |
|--|---|
| | the contour C , i.e., $ds = \mathbf{r}'(t) dt$. It |
| | is also denoted by dl [20] |
| $\int_C f(\mathbf{r}) \mathrm{d}s, \int_a^b f(\mathbf{r}(t)) \mathbf{r}'(t) \mathrm{d}t$ | Line integral of the function $f: \mathbb{R}^n \to$ |
| | \mathbb{R} along the contour C [1, 22] |
| $\int_C \mathbf{F} \cdot d\mathbf{r}, \int_a^b \mathbf{F}(\mathbf{r}(t)) \cdot \mathbf{r}'(t) dt, \int_C \mathbf{F} \cdot \mathbf{T} ds$ | Line integral of vector field \mathbf{F} along |
| | the contour C [1, 22] |
| $\int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F}, \int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{r}$ | Alternative notation to the line inte- |
| | gral, where the parametric variable t |
| | goes from a to b , making r goes from |
| | $\mathbf{r}(a) = \mathbf{a} \text{ to } \mathbf{r}(b) = \mathbf{b} [1]$ |
| \oint_C, \oint_C | Closed line integral along the contour |
| | C |
| $\mathbf{r}(u,v)$ | Vector position |
| | (x(u, v), y(u, v), z(u, v)) parametrized |
| | by (u, v) |
| \mathbf{r}_u | $(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)$ |
| \mathbf{r}_{v} | $(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$ |
| $\mathrm{d}A$ | Differential operator of a 2D area |
| | (denoted by D or R) in the \mathbb{R}^2 do- |
| | main. This differential operator can |
| | be solved in different ways (rectangu- |
| D D | lar, polar, cylindric, etc) [22] |
| D,R | Integration domain in which dA is in- |
| S | tegrated, i.e., $\iint_D f dA$ [22] |
| 3 | Smooth surface S , i.e., a 2D area in a 3D space (\mathbb{R}^3 domain) |
| $\mathrm{d}S$, $ \mathbf{r}_u \times \mathbf{r}_v \mathrm{d}A$ | Differential operator of a 2D area in |
| \mathbf{u}_{S} , $ \mathbf{I}_{u} \wedge \mathbf{I}_{v} \mathbf{u}_{A}$ | a 3D domain (an surface). Note that |
| | $dS = \mathbf{r}_u \times \mathbf{r}_v dA$ should be accompa- |
| | nied with the change of the integra- |
| | tion interval(from S to D) |
| $A(S), \iint_{S} dS, \iint_{D} \mathbf{r}_{u} \times \mathbf{r}_{v} dA$ | Area of the surface S parametrized by |
| (-), JJS , JJD -u · · -v | (u, v), in which dA is the area defined |
| | in the D domain (which is form by |
| | the u -by- v graph) |
| $\mathrm{d}V$ | Differential operator of a shape vol- |
| | ume (denoted by E) in \mathbb{R}^3 domain, |
| | i.e., $\iiint_E dV = V$ |
| E | Integration domain in which $\mathrm{d}V$ is in- |
| | tegrated, i.e., $\iiint_E f dV$ [22] |
| | |

| $V, \iint_D f \mathrm{d}A, \iiint_E f \mathrm{d}V$ | Volume of the function f over the re- |
|--|---|
| 2 | gions D (in the case of double inte- |
| | grais) or E (in the case of triple inte- |
| | grais) |
| $\iint_{S} f \mathrm{d}S$, $\iint_{D} f \mathbf{r}_{u} \times \mathbf{r}_{v} \mathrm{d}A$ | Surface integral over S |
| $\mathbf{n}(u,v), \frac{\mathbf{r}_u(u,v) \times \mathbf{r}_v(u,v)}{ \mathbf{r}_v(u,v) \times \mathbf{r}_v(u,v) }$ | Normal vector of of the smooth sur- |
| $ \mathbf{r}_{u}(u,v)\times\mathbf{r}_{v}(u,v) $ | face S |
| $\iint_{\mathbf{S}} \mathbf{F} \cdot \mathbf{n} \mathrm{d}S, \iint_{\mathbf{S}} \mathbf{F} \cdot \mathrm{d}\mathbf{S},$ | Flux integral of vector field F through |
| $\iint_{D} \mathbf{F} \cdot (\mathbf{r}_{u} \times \mathbf{r}_{v}) \mathrm{d}A$ | the smooth surface S ($\mathbf{n} dS \triangleq d\mathbf{S}$) |
| $\nabla \times \mathbf{F}$, curl \mathbf{F} | Curl (rotacional) of the vector field ${\bf F}$ |
| $\nabla \cdot \mathbf{F}, \operatorname{div} \mathbf{F}$ | Divercence of the vector field ${f F}$ |
| $\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,$ | Scalar Laplacian operator (per- |
| $\frac{\partial^2 f}{\partial x^2} + \frac{\partial^2 f}{\partial y^2} + \frac{\partial^2 f}{\partial z^2}$ | formed on a scalar-valued function |
| | $f: \mathbb{R}^n \to \mathbb{R}$ |
| $\nabla^2 \mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla (\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$ | Vector Laplacian operator (per- |
| $(\partial^2 \mathbf{F}/\partial x^2, \partial^2 \mathbf{F}/\partial y^2, \partial^2 \mathbf{F}/\partial z^2)$ | formed on a vector field, i.e., a vector- |
| | valued function, $\mathbf{F} : \mathbb{R}^n \to \mathbb{R}^n$). |
| | ∇^2 denotes the scalar (vector) Lapla- |
| | cian if the function is scalar-valued |
| | (vector-valued) |
| | (vector-varued) |

10 Generic mathematical symbols

| | Q.E.D. |
|----------|---------------------|
| <u>_</u> | Equal by definition |
| :=, ← | Assignment [21] |
| ≠ | Not equal |
| ∞ | Infinity |
| i | $\sqrt{-1}$ |

11 Abbreviations

PS: Only names of techniques and algorithms or usual abbreviations are considered.

| wrt. | With respect to |
|------|-------------------------------------|
| st. | Subject to |
| iff. | If and only if |
| EVD | Eigenvalue decomposition, or eigen- |
| | decomposition [16] |
| SVD | Singular value decomposition |
| СР | CANDECOMP/PARAFAC |

| SGD | Stochastic gradient descent |
|------|-------------------------------------|
| SVM | Support vector machine |
| BPNN | Backpropagation neural network [12] |
| RBF | Radial basis function |
