| 10 | Ger  | neric mathematical symbols            |
| 11 | A bl | previations                           |

#### 1 Font notation

| $a, b, c, \ldots, A, B, C, \ldots$                  | Scalars  |
|---|----------|
| $a, b, c, \dots$                                    | Vectors  |
| $\overline{\mathbf{A},\mathbf{B},\mathbf{C},\dots}$ | Matrices |
| $\mathcal{A}, \mathcal{B}, \mathcal{C}, \dots$      | Tensors  |
| $A, B, C, \ldots, A, B, C, \ldots, A, B, C, \ldots$ | Sets     |

## 2 Signals and functions

#### 2.1 Time indexing

| x(t)                               | Continuous-time $t$                           |
|------------------------------------|---|
| $x[n],x[k],x[m],x[i],\ldots$       | Discrete-time $n, k, m, i, \ldots$ (parenthe- |
| $x_n, x_k, x_m, x_i, \dots$        | sis should be adopted only if there           |
| $x(n), x(k), x(m), x(i), \dots$    | are no continuous-time signals in the         |
|                                    | context to avoid ambiguity)                   |
| $x[((n-m))_N][34], x((n-m))_N[26]$ | Circular shift in $m$ samples within a        |
|                                    | N-samples window                              |

#### 2.2 Common signals

| $\delta(t)$                  | Delta function                        |
|------------------------------|---------------------------------------|
| $\delta[n], \delta_{i,j}$    | Kronecker function $(n = i - j)$      |
| h(t), h[n]                   | Impulse response (continuous and      |
|                              | discrete time)                        |
| $\tilde{x}[n], \tilde{x}(t)$ | Periodic discrete- or continuous-time |
|                              | signal                                |
| $\hat{x}[n], \hat{x}(t)$     | Estimate of $x[n]$ or $x(t)$          |
| $\dot{x}[m]$                 | Interpolation of $x[n]$               |

#### 2.3 Common functions

| $\mathcal{O}(\cdot), O(\cdot)$ | Big-O notation                        |
|--------------------------------|---------------------------------------|
| $\Gamma(\cdot)$                | Gamma function                        |
| $Q(\cdot)$                     | Quantization function                 |
| $-\operatorname{sgn}(\cdot)$   | Signum function                       |
| $\tanh(\cdot)$                 | Hyperbolic tangent function           |
| $I_{lpha}(\cdot)$              | Modified Bessel function of the first |
|                                | kind and order $\alpha$               |

|   | n | Binomial coefficient |
|---|---|----------------------|
| ( | k | Dinomai coemcient    |

## 2.4 Operations and symbols

| $f:A\to B$  | A function $f$ whose domain is $A$ and codomain is $B$   |
|---|--|
| $\mathbf{f}:A	o\mathbb{R}^n$  | A vector-valued function $\mathbf{f}$ , i.e., $n \geq 2$   |
| $f^n, x^n(t), x^n[k]$   | <i>n</i> th power of the function $f$ , $x[n]$ or  |
| V   | x(t)   |
| $f^{(n)}, x^{(n)}(t)$   | nth derivative of the function $f$ or  |
| •   | x(t)   |
| $f', f^{(1)}, x'(t)$  | 1th derivative of the function $f$ or  |
|   | x(t)   |
| $f'', f^{(2)}, x''(t)$  | 2th derivative of the function $f$ or  |
|   | x(t)   |
| $\underset{x \in \mathcal{A}}{\arg\max} \ f(x)$                               | Value of $x$ that minimizes $x$  |
| arg min f(x)  | Value of $x$ that minimizes $x$  |
| $f(\mathbf{x}) = \inf_{\mathbf{y} \in \mathcal{A}} g(\mathbf{x}, \mathbf{y})$ | Infimum, i.e., $f(\mathbf{x}) =$   |
| $\mathbf{y} {\in} \mathcal{A}$  | $\min \{ g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g) \},$ |
|   | which is the greatest lower bound of   |
|   | this set [10]  |
| $f(\mathbf{x}) = \sup g(\mathbf{x}, \mathbf{y})$                              | Supremum, i.e., $f(\mathbf{x}) =$  |
| $\mathbf{y} {\in} \mathcal{A}$  | $\max \{g(\mathbf{x}, \mathbf{y}) \mid \mathbf{y} \in \mathcal{A} \land (\mathbf{x}, \mathbf{y}) \in \text{dom}(g)\}\$   |
|   | which is the least upper bound of  |
|   | this set [10]  |
| $f \circ g$   | Composition of the functions $f$ and   |
|   | g  |
| *   | Convolution (discrete or continuous)   |
| ⊕ [17],  N [34]   | Circular convolution   |

## 2.5 Digital signal processing

| $T_s[26], T[34]$ | Sampling period                        |
|------------------|--|
| $f_s, F_s[26]$   | Sampling frequency (in Hz or sam-      |
|                  | ples per secod [26, chapter 3]), i.e., |
|                  | $1/T_s$                                |

|   | Continuous linear frequency (in Hz).            |
|---|---|
| J   | Apparently, there is no notation for            |
|   | the discrete linear frequency, we use           |
|   | $\omega$ only. However, in [26], the upper-     |
|   | case letters $F$ and $\Omega$ are used to de-   |
|   | note the continuous-time frequency,             |
|   | while the lowercase $f$ and $\omega$ denote     |
|   | the discrete-time frequency (Oppen-             |
|   | heim [34] does not do it!)                      |
| Ω [26]  | Continuous angular frequency (in                |
| <b>32</b> [20]  | rad/s), that is, $2\pi f$ .                     |
| $\Omega_{\scriptscriptstyle S}$                       | Sampling frequency (in rad/s), i.e.,            |
| 325   | $2\pi f_s$                                      |
| $\omega$  | Discrete angular frequency, i.e., $\Omega T_s$  |
| w   | [26, eq $(3.27)$ ]. As $\omega$ is also used to |
|   | denote continuous angular frequency             |
|   | outside the DSP context, it is always           |
|   | convenient to state that it denotes             |
|   | the discrete frequency when it does             |
| $W_N$   | Twiddle factor, $e^{-j\frac{2\pi}{N}}$ [26]     |
| $\frac{W_N}{N}$                                       | Number of samples in the DFT/FFT                |
| $\mathcal{R}_N[n]$                                    | Rectangular window used to cut off              |
|   | the discrete sequences [26]                     |
| $\Omega_N$ [34], B                                    | One-sided effective bandwidth of the            |
|   | continuous-time signal spectrum                 |
| $\omega_s$ [26]                                       | Stop frequency                                  |
| $\omega_p$ [26]                                       | Pass frequency                                  |
| $\Delta\omega$ [26]                                   | $\omega_s - \omega_p$                           |
| $\omega_c$ [26]                                       | Cutoff frequency                                |
| s(t)  | Impulse train                                   |
| $gdr \left[ H(e^{j\omega}) \right] \left[ 34 \right]$ | Group delay of $H(e^{j\omega})$                 |
| $\angle H(e^{j\omega})$ [34]                          | Phase response of $H(e^{j\omega})$              |
| $H(e^{j\omega})$ [34]                                 | Magnitude (or gain) of $H(e^{j\omega})$         |
| $x_c(t)$ [34], $x(t)$                                 | Continuous-time signal                          |
| $x_s(t)$  | Sampled version of $x(t)$ , i.e., $x(t)s(t)$    |
| $x_r(t)$  | Reconstruction of $x(t)$ from interpo-          |
|   | lation  |
| $\tilde{x}[n]$  | Periodic extension of the aperi-                |
|   | odic signal $x[n]$                              |
|   |   |

#### 2.6 Transformations

| $\mathcal{F}\left\{\cdot\right\}$ [34, section 2.9] | Fourier transform (FT) |
|---|------------------------|
|   |                        |

| OTFT), Discrete Fourier Trans-  |
|---|
| rm (DFT), Discrete Fourier Series   |
| OFS), respectively  |
| aplace transform  |
| transform   |
| ilbert transform of $x(t)$ or $x[n]$  |
| aplace transform of $x(t)$  |
| ourier transform (FT) (in linear fre-   |
| and x = and |
| ourier transform (FT) (in angular   |
| equency, rad/sec) of $x(t)$   |
| iscrete-time Fourier transform  |
| OTFT) of $x[n]$   |
| iscrete Fourier transform (DFT) or  |
| st Fourier transform (FFT) of $x[n]$ ,  |
| even the Fourier series (FS) of the   |
| eriodic signal $x(t)$   |
| iscrete Fourier series (DFS) of $\tilde{x}[n]$  |
| transform of $x[n]$   |
|   |

## 3 Probability, statistics, and stochastic processes

## 3.1 Operators and symbols

| $\mathbf{E}\left[\cdot\right],\mathbf{E}\left[\cdot\right]\left[33\right],E\left[\cdot\right],\mathbb{E}\left[\cdot\right]\left[16\right]$  | Statistical expectation operator      |
|---|---------------------------------------|
| $\mathbf{E}_{u}\left[\cdot\right],\mathbf{E}_{u}\left[\cdot\right]\left[33\right],E_{u}\left[\cdot\right],\mathbb{E}_{u}\left[\cdot\right]$ | Statistical expectation operator with |
|   | respect to $u$                        |
| $\langle \cdot \rangle$   | Ensemble average                      |
| var [·] [33], VAR[·] [9, 25, 32, 36]  | Variance operator                     |
| $\operatorname{var}_{u}\left[\cdot\right]\left[\cdot\right], \operatorname{VAR}_{u}\left[\cdot\right]$                                      | Variance operator with respect to $u$ |
| $cov[\cdot], COV[\cdot]$  | Covariance operator [9]               |
| $\operatorname{cov}_{u}[\cdot], \operatorname{COV}_{u}[\cdot]$  | Covariance operator with respect to   |
|   | и                                     |
| $\mu_x$   | Mean of the random variable $x$       |
| $\mu_{x}, m_{x}$  | Mean vector of the random variable    |
|   | x [11]                                |
| $\mu_n$   | nth-order moment of a random vari-    |
|   | able                                  |
| $\frac{\sigma_x^2, \kappa_2}{\mathcal{K}_x, \mu_4}$   | Variance of the random variable $x$   |
| $\mathcal{K}_x, \mu_4$  | Kurtosis (4th-order moment) of the    |
|   | random variable $x$                   |

| $\kappa_n$    | nth-order cumulant of a random vari-  |
|---------------|---------------------------------------|
|               | able                                  |
| $\rho_{x,y}$  | Pearson correlation coefficient be-   |
|               | tween $x$ and $y$                     |
| $a \sim P$    | Random variable $a$ with distribution |
|               | P                                     |
| $\mathcal{R}$ | Rayleigh's quotient                   |

#### 3.2 Stochastic processes

PS: Estimated terms come with a hat above of it

| $r_{\scriptscriptstyle X}(	au)$ [33], $R_{\scriptscriptstyle X}(	au)$ | Autocorrelation function of the signal                  |
|---|---|
|   | x(t) or $x[n]$  |
| $S_x(f), S_x(j\omega)$  | Power spectral density (PSD) of $x(t)$                  |
|   | in linear $(f)$ or angular $(\omega)$ frequency         |
| $S_{x,y}(f), S_{x,y}(j\omega)$  | Cross PSD of $x(t)$ and $y(t)$ in linear                |
|   | or angular $(\omega)$ frequency                         |
| $\overline{R_x}$  | (Auto)correlation matrix of $\mathbf{x}(n)$             |
| $r_{x,d}(\tau), R_{x,d}(\tau)$  | Cross-correlation between $x[n]$ and                    |
|   | d[n] or $x(t)$ and $d(t)$ [33]                          |
| $\overline{\mathbf{R}_{\mathbf{x}\mathbf{y}}}$                        | Cross-correlation matrix of $\mathbf{x}(n)$ and         |
|   | $\mathbf{y}(n)$   |
| $\mathbf{r}_{xd} [24],  \mathbf{p}_{xd} [16]$                         | Cross-correlation vector between                        |
|   | $\mathbf{x}(n)$ and $d(n)$                              |
| $c_x(\tau), C_x(\tau)$  | Autocovariance function of the signal                   |
|   | x(t) or $x[n]$ [33]                                     |
| $C_x, K_x, \Sigma_x, \text{cov}[x]$                                   | (Auto)covariance matrix of <b>x</b> [9, 25,             |
|   | 32, 36, 43  |
| $\tilde{\mathbf{C}}_{\mathbf{x}}[36]$                                 | Pseudocovariance matrix of <b>x</b>                     |
| $c_{xy}(\tau), C_{xy}(\tau)$  | Cross-covariance function of the sig-                   |
|   | $\operatorname{nal} x(t) \text{ or } x[n] \text{ [33]}$ |
| $C_{xy}, K_{xy}, \Sigma_{xy}$   | Cross-covariance matrix of <b>x</b> and <b>y</b>        |

#### 3.3 Functions

| $Q(\cdot)$                   | <i>Q</i> -function, i.e., $P[\mathcal{N}(0,1) > x][36]$               |
|------------------------------|---|
| $\operatorname{erf}(\cdot)$  | Error function [36]   |
| $\operatorname{erfc}(\cdot)$ | Complementary error function i.e.,                                    |
|                              | $\operatorname{erfc}(x) = 2Q(\sqrt{2}x) - \operatorname{erf}(x) [36]$ |
| P[A]                         | Probability of the event or set $A$ [32]                              |

| $p(\cdot), f(\cdot)$  | Probability density function (PDF)    |
|---|---------------------------------------|
|   | or probability mass function (PMF)    |
|   | [32]                                  |
| $p(x \mid A)$   | Conditional PDF or PMF [32]           |
| $F(\cdot)$  | Cumulative distribution function      |
|   | (CDF)                                 |
| $\Phi_{x}(\omega), M_{x}(j\omega), E\left[e^{j\omega x}\right]$           | First characteristic function (CF) of |
|   | x [36, 42]                            |
| $M_X(t), \Phi_X(-jt), E[e^{tx}]$  | Moment-generating function (MGF)      |
|   | of $x [36, 42]$                       |
| $\Psi_{x}(\omega), \ln \Phi_{x}(\omega), \ln E\left[e^{j\omega x}\right]$ | Second characteristic function        |
| $K_x(t), \ln E\left[e^{tx}\right], \ln M_x(t)$                            | Cumulant-generating function          |
|   | (CGF) of $x$ [25]                     |

## 3.4 Distributions

| $\mathcal{N}(\mu,\sigma^2)$                      | Gaussian distribution of a random                |
|--|--|
|  | variable with mean $\mu$ and variance $\sigma^2$ |
| $\mathcal{CN}(\mu, \sigma^2)$                    | Complex Gaussian distribution of a               |
|  | random variable with mean $\mu$ and              |
|  | variance $\sigma^2$                              |
| $\mathcal{N}(\mu, \Sigma)$                       | Gaussian distribution of a vector ran-           |
|  | dom variable with mean $\mu$ and co-             |
|  | variance matrix $\Sigma$                         |
| $\mathcal{CN}(oldsymbol{\mu},oldsymbol{\Sigma})$ | Complex Gaussian distribution of a               |
|  | vector random variable with mean $\mu$           |
|  | and covariance matrix $\Sigma$                   |
| $\frac{\mathcal{U}(a,b)}{\chi^2(n),\chi^2_n}$    | Uniform distribution from a to b                 |
| $\chi^2(n), \chi_n^2$                            | Chi-square distribution with $n$ degree          |
|  | of freedom (assuming that the Gaus-              |
|  | sians are $\mathcal{N}(0,1)$ )                   |
| $\exp(\lambda)$                                  | Exponential distribution with rate               |
|  | parameter $\lambda$                              |
| $\Gamma(\alpha, \beta)$                          | Gamma distribution with shape pa-                |
|  | rameter $\alpha$ and rate parameter $\beta$      |
| $\Gamma(\alpha, \theta)$                         | Gamma distribution with shape pa-                |
|  | rameter $\alpha$ and scale parameter $\theta$ =  |
|  | 1/eta  |
| $\overline{\mathrm{Nakagami}(m,\Omega)}$         | Nakagami-m distribution with shape               |
|  | parameter or fading figure $m$ and               |
|  | spread, scale, or shape parameter $\Omega$       |
| Rayleigh( $\sigma$ )                             | Rayleigh distribution with scale pa-             |
|  | rameter $\sigma$                                 |

| $\operatorname{Rayleigh}(\Omega)$                           | Rayleigh distribution with the second                            |
|---|--|
|   | moment $\Omega = E\left[x^2\right] = 2\sigma^2$                  |
| $Rice(s,\sigma)$  | Rice distribution with noncentrality                             |
|   | parameter s and $\sigma$ . $s^2$ represent the                   |
|   | specular component power   |
| $\operatorname{Rice}(\Omega, K), \operatorname{Rice}(A, K)$ | Rice distribution with Rice factor                               |
|   | $K = s^2/2\sigma^2$ and scale parameter $\Omega =$               |
|   | $A = s^{2} + 2\sigma^{2} = 2\sigma^{2}(K+1)$ ( $\Omega$ is pref- |
|   | ered over A)   |

# 4 Machine learning, optimization theory, and statistical signal processing

#### 4.1 Matrix Calculus (in denominator layout)

PS: Estimated terms come with a hat above of it

| $\mathbf{g}, \nabla f, \frac{\partial f}{\partial \mathbf{w}}$   | Gradient descent vector, used in the steepest descent method, also called gradient descent method or deterministic gradient method.   |
|--|---|
| <b>g</b> if the gradient vector is $\nabla f$ (or $\hat{\mathbf{g}}$ if the gradient vector is $\mathbf{g}$ [24])  | Stochastic gradient descent (SGD) vector, i.e., instantaneous approximation of gradient descent vector  |
| $\mathbf{g}_{\mathbf{x}}, \nabla_{\mathbf{w}} f, \frac{\partial f}{\partial \mathbf{w}}$   | Gradient descent vector with respect $\mathbf{w}$ [9]   |
| $\mathbf{J}, \frac{\partial \mathbf{y}^{\top}}{\partial \mathbf{x}},   abla \mathbf{y}^{\top}  [24]$   | Jacobian matrix.  |
| $ \frac{\mathbf{J}, \frac{\partial \mathbf{y}^{T}}{\partial \mathbf{x}}, \nabla \mathbf{y}^{T} [24]}{\mathbf{H}, \frac{\partial^{2} f}{\partial \mathbf{w}^{2}}, \nabla^{2} f [24], \nabla \nabla f [9]} $ | Hessian matrix. The notation $\nabla^2$ is sometimes used in Matrix Calculus to denote the second-order vector derivative. However, it must be avoided since, in Vector Calculus, $\nabla^2$ also denotes the Laplacian operator which in turn may be scalar or vector Laplacian operator depending on whether $f$ is scalar- or vector-valued, respectively. Some discussion about can be found in [5–7] |

#### 4.2 Statistics: estimation and detection theory

| X   | output  |
|---|---|
| W   | Parameters  |
| $p(\mathbf{x} \mid \mathbf{w}), l(\mathbf{x} \mid \mathbf{w})[32]$                                  | Likelihood function   |
| $ \frac{\ln p(\mathbf{x} \mid \mathbf{w})}{} $  | Log-likelihood function   |
| $\Lambda(\mathbf{x})[32], \frac{p(\mathbf{x} H_1)}{p(\mathbf{x} H_0)} [28, 32], L(\mathbf{x}) [12,$ | Likelihood ratio function (also called  |
| [28]  | likelihood ratio test (LRT) [28])   |
| $\Lambda_l(\mathbf{x}), \mathcal{L}(\mathbf{x})$ [12], $l(\mathbf{x})$ [28]                         | Log-likelihood ratio (LLR [28]) func-   |
|   | tion  |
| $\hat{ ho}_{x,y}$   | Estimated Pearson correlation coeffi-   |
|   | cient between $x$ and $y$   |
| $\overline{\mathcal{R}_k}$  | kth Decision region   |
| $x(t) \stackrel{\textit{m.s.e}}{=} y(t)$  | x(t) equals $y(t)$ is the mean square er-   |
|   | ror sense, that is $E[ x(t) - y(t) ^2] = 0$   |
| $x(t) = 1. i. m. \sum_{i=1}^{N} x_i \phi_i(t) [44]$   | $\lim_{N\to\infty} \mathbb{E}\left[\left x(t) - \sum_{i=1}^{N} x_i \phi_i(t)\right ^2\right] = 0$ |
| $N{ ightarrow}\infty$   | (l.i.m stands for "limit in the mean").   |
|   | It is analogous to the $\stackrel{m.s.e}{=}$ notation,  |
|   | but denoting that they equal in the   |
|   | MSE sense only when $N \to \infty$  |
|   | WIGH Schoolonly when N — W  |

## ${\bf 4.3}\quad {\bf Signals,\,(hyper) parameters,\,system\,\,performance,\,and}\\ {\bf criteria}$

| N            | Number of instances (or samples),             |
|--------------|---|
|              | i.e., $n \in \{1, 2,, N\}$                    |
| $N_{ m trn}$ | Number of instances in the training           |
|              | set, i.e., $n \in \{1, 2,, N_{trn}\}$         |
| $N_{ m tst}$ | Number of instances in the test set,          |
|              | i.e., $n \in \{1, 2, \dots, N_{\text{tst}}\}$ |
| $N_{ m val}$ | Number of instances in the validation         |
|              | set, i.e., $n \in \{1, 2,, N_{\text{val}}\}$  |
| $N_e$        | Number of epochs                              |
| $N_a$        | Number os attributes                          |
| K [24]       | Number of classes (which is the num-          |
|              | ber of outputs in multiclass prob-            |
|              | lems). Use $k$ to iterate over it             |
| L            | Number of layers, i.e., the depth of          |
|              | the network. Use $l$ to iterate over it       |

| $M_l, m_l [24], J [24]$  | Number of neurons at the $l$ th layer.<br>You might prefer $J$ in the case of the single-layer perceptron (use $j$ to iterate over it). If you want to iterate through it, a sensible variation of Haykin notation is $M_l$ , where $m_l$ |
|--|---|
|  | can be used as an iterator. $m_0$ is the length of the input vector without the bias.   |
| $\mathbf{x}(n), \mathbf{x}_n$  | Input signal (in $\mathbb{R}^{N_a+1}$ )   |
| $x_0(n)$   | Dummy input of the bais, which is usually $\pm 1$ . $+1$ is preferred [9, 24].  |
| $\varphi(\cdot)[24], h(\cdot)[9]$  | Activation function   |
| $\frac{\varphi(\cdot)[24], \ h(\cdot)[9]}{\varphi'(v_{m_l}^{(l)}(n))[24], \ \frac{\partial y_{m_l}^{(l)}(n)}{\partial v_{m_l}^{(l)}(n)}} \ [24]$                                 | Partial derivative of the activation function with respect to $v_{m_l}^{(l)}(n)$ $(m_l$ neuron at $l$ th layer)   |
| $y_{m_l}^{(l)}(n), \varphi\left(v_{m_l}^{(l)}(n)\right)[24], \mathbf{t}_{m_l}^{(l)}(n)[9]$   | Output signal (target) of the $m_l$ th neuron at the $l$ th layer   |
| $\mathbf{y}^{(l)}(n)$  | Output signal of the <i>l</i> th layer  |
|  | Output of the neural network  |
|  | Desired label (in case of supervised learning). For multiclass classification, one-hot encoding is usually used. For binary (scalar) classification, however antipodal encoding, i.e., {-1,1} is more recommended [24].                   |
| $e_{m_l}(n)$   | Error signal of the neuron $m_l$ at the   |
|  | Ith layer   |
| $\frac{\mathbf{e}(n), \mathbf{d}(n) - \mathbf{y}(n)}{\mathbf{w}_{m_l}^{(l)}(n), \boldsymbol{\theta}_{m_l}^{(l)}(n)}$   | Error signal  |
| $\mathbf{w}_{m_{l}}^{(l)}(n), \mathbf{\theta}_{m_{l}}^{(l)}(n) = \begin{bmatrix} w_{m_{l},0}^{(l)}(n) & w_{m_{l},1}^{(l)}(n) & \dots & w_{m_{l},m_{l-1}}^{(l)}(n) \end{bmatrix}$ | Parameters, coefficients, or synaptic weights vector in the <i>l</i> th layer. In   |
|  | the case of Single Layer Perceptrons or adaptive filters, the superscript is omitted  |
| $w_{m_l,0}^{(l)}(n), b_{m_l}^{(l)}(n)$   | Bias (the first term of the weight vector) of the <i>l</i> th layer   |
| $\mathbf{W}(n), \begin{bmatrix} \mathbf{w}(1) & \mathbf{w}(2) & \cdots & \mathbf{w}(N) \end{bmatrix}^{T}$  | Matrix of the synaptic weights  |
| $\widetilde{\mathbf{W}}(n)$  | Matrix of the synaptic weights, but without the bias  |

| $v_{m_l}^{(l)}(n), \mathbf{w}_{m_l}^{(l)\top}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$                            | Induced local field or activation potential. At the first layer $\mathbf{y}_{m_0}^{(0)}(n) = \mathbf{x}(n)$ [9] |
|---|---|
| $\mathbf{v}^{(l)}(n), \mathbf{W}^{(l)}(n)\mathbf{y}_{m_{l-1}}^{(l-1)}(n)$                                   | Vector of the local fields at the <i>l</i> th   |
|   | layer   |
| $\mathbf{w}^{\star}, \mathbf{w}_{o}, \mathbf{\theta}^{\star}, \mathbf{\theta}_{o}$                          | Optimum value of the parameters,  |
|   | coefficients, or synaptic weights vec-  |
|   | tor ( $\mathbf{w}^*$ is also used [9] but it is not   |
|   | recommended as it may be confused   |
|   | with the conjugation operator)  |
| $\delta_{m_l}^{(l)}(n),rac{\partial \mathscr{E}(n)}{\partial  u_{m_l}^{(l)}(n)}$                           | Local gradient of the $m_l$ th neuron of  |
| $\partial v_{m_l}(n)$   | the $l$ th layer.   |
| $\boldsymbol{\delta}^{(l)}(n)$  | Vector of the local gradients of all  |
|   | neurons at the $l$ th layer   |
| $\mathbf{X}, \begin{bmatrix} \mathbf{x}(1) & \mathbf{x}(2) & \cdots & \mathbf{x}(N) \end{bmatrix}$          | Data matrix [24]  |
| $\eta(n)$   | Learning rate hyperparameter [24]   |
| $\mathscr{R}$   | Bayes risk or average risk [24]   |
| $c_{ij}, C_{ij}$  | Misclassification cost in deciding in   |
| -33   | favor of class $\mathscr{C}_i$ (represented in the  |
|   | subspace $\mathcal{H}_i$ ) when the $\mathcal{C}_i$ is the true   |
|   | class (used in Bayes classifiers/detec-   |
|   | tors) [12, 24]  |
| $\mathscr{C}_k[24],  \mathcal{C}_k[9]$  | kth class   |
| $ \begin{array}{c c} \mathscr{C}_k[24],  \mathscr{C}_k[9] \\ \mathscr{T}[24],  \mathbb{X}[22] \end{array} $ | Training set, i.e., the set $\{\mathbf{x}(n), d(n)\}$   |
|   | that is used in the training phase.   |
| $\mathcal{H}_k$   | Subspace of the training vector be-   |
|   | longing to the class $\mathcal{C}_k$  |
| $\mathcal{H}$   | Complete space of the input vector,   |
|   | i.e., $\mathcal{H}_1 \cup \mathcal{H}_2 \cup \cdots \mathcal{H}_K$  |
| $\mathscr{X}$ [24]  | Set of all vectors in the training,   |
|   | batch, validation, or test dataset that   |
|   | were misclassified  |
| $\mathscr{E}(\mathbf{w}), \mathscr{E}(\mathbf{w}(n)), \mathscr{E}(n)$                                       | Cost function or objective function   |
|   | (the way it is written depends on the   |
|   | purpose of the text)  |
| $J(\mathbf{w}), J(\mathbf{w}(n)), J(n)$   | Alternative to the cost function  |
| $\Delta \mathcal{E}(\mathbf{w}(n)), \Delta \mathcal{E}(n), \mathcal{E}(\mathbf{w}(n+1))$ -                  | Cost function or objective function   |
| $\mathscr{E}(\mathbf{w}(n))$  | (the way it is written depends on the   |
|   | purpose of the text)  |
| $\mathscr{E}_{\mathrm{av}}(\cdot)[24]$  | Error energy averaged over the train-   |
|   | ing sample or the empirical risk  |
|   |   |

| ρ          | Distance of the margin of separation               |
|------------|--|
|            | between two classes (Support Vector                |
|            | Machine, SVM)                                      |
| $g(\cdot)$ | Discriminant function, i.e., $g(\mathbf{w}^*) = 0$ |

## 4.4 abbreviations

| MSE[29]             | Mean square error                   |
|---------------------|-------------------------------------|
| MVU[29]             | Minimum variance unbiased           |
| CRB[44] or CRLB[28] | Cramér-Rao bound or Cramer-Rao      |
|                     | lower bound                         |
| BCRB[44]            | Baysean Cramér-Rao bound            |
| DNN                 | Deep Neural Network                 |
| DL                  | Deep Learning                       |
| ANN                 | Artificial Neural Networks [22]     |
| NN                  | Nearest Neighbor                    |
| AI                  | Artificial Intelligence             |
| SGD                 | Stochastic gradient descent         |
| SVM                 | Support vector machine              |
| BPNN                | Backpropagation neural network [27] |
| RBF                 | Radial basis function               |
| OLS                 | Ordinary Least Squares              |
| RLS                 | Recursive Least Squares             |
| LMS                 | Least Mean Squares                  |

## 5 Linear Algebra

#### 5.1 Common matrices and vectors

| $\mathbf{W}, \mathbf{D}$   | Diagonal matrix                           |
|--|---|
| P  | Projection matrix; Permutation ma-        |
|  | trix                                      |
| J  | Jordan matrix                             |
| L  | Lower matrix                              |
| U  | Upper matrix                              |
| C  | Cofactor matrix                           |
| $\mathbf{C}_{\mathbf{A}}, \operatorname{cof}\left(\mathbf{A}\right)$ | Cofactor matrix of A                      |
| S  | Symmetric matrix                          |
| Q  | Orthogonal matrix                         |
| $rac{	extbf{Q}}{	extbf{I}_N}$                                       | $N \times N$ -dimensional identity matrix |
| $0_{M 	imes N}$  | $M \times N$ -dimensional null matrix     |

| $0_N$           | N-dimensional null vector             |
|-----------------|---------------------------------------|
| $1_{M 	imes N}$ | $M \times N$ -dimensional ones matrix |
| $1_N$           | N-dimensional ones vector             |
| 0               | Null matrix, vector, or tensor (di-   |
|                 | mensionality understood by context)   |
| 1               | Ones matrix, vector, or tensor (di-   |
|                 | mensionality understood by context)   |

## 5.2 Indexing

| $x_{i_1,i_2,,i_N}, [\mathcal{X}]_{i_1,i_2,,i_N}$       | Element in the position                               |
|--|---|
| 2,2, ,1,   | $(i_1, i_2, \ldots, i_N)$ of the tensor $\mathcal{X}$ |
| $\mathcal{X}^{(n)}$                                    | nth tensor of a nontemporal sequence                  |
| $\mathbf{x}_n, \mathbf{x}_{:n}$                        | nth column of the matrix $X$                          |
| $\mathbf{x}_{n}$ :                                     | nth row of the matrix $X$                             |
| $\mathbf{X}_{i_1,\ldots,i_{n-1},:,i_{n+1},\ldots,i_N}$ | Mode- $n$ fiber of the tensor $\mathcal{X}$           |
| $\mathbf{x}_{:,i_2,i_3}$                               | Column fiber (mode-1 fiber) of the                    |
|  | thrid-order tensor $\mathcal{X}$                      |
| $\mathbf{x}_{i_1,:,i_3}$                               | Row fiber (mode-2 fiber) of the thrid-                |
|  | order tensor $\mathcal{X}$                            |
| $\mathbf{x}_{i_1,i_2,:}$                               | Tube fiber (mode-3 fiber) of the                      |
|  | thrid-order tensor $\mathcal{X}$                      |
| $\overline{\mathbf{X}}_{i_1,:,:}$                      | Horizontal slice of the thrid-order                   |
|  | tensor $\mathcal{X}$                                  |
| $\mathbf{X}_{:,i_2,:}$                                 | Lateral slices slice of the thrid-order               |
|  | tensor $\mathcal{X}$                                  |
| $\mathbf{X}_{i_3}, \mathbf{X}_{:,:,i_3}$               | Frontal slices slice of the thrid-order               |
|  | tensor $\mathcal{X}$                                  |

## 5.3 General operations

| $\left\langle \mathbf{a},\mathbf{b} ight angle ,\mathbf{a}^{	op}\mathbf{b},\mathbf{a}\cdot\mathbf{b}$ | Inner or dot product              |
|---|-----------------------------------|
| $\mathbf{a} \circ \mathbf{b}, \mathbf{a} \mathbf{b}^{	op}$  | Outer product                     |
| $\otimes$   | Kronecker product                 |
| $\odot$   | Hadamard (or Schur) (elementwise) |
|   | product                           |
| .⊙n   | nth-order Hadamard power          |
| $0.0\frac{1}{n}$  | nth-order Hadamard root           |
| Ø   | Hadamard (or Schur) (elementwise) |
|   | division                          |
| ♦   | Khatri-Rao product                |
| $\otimes$   | Kronecker Product                 |

## 5.4 Operations with matrices and tensors

| $\mathbf{A}^{-1}$   | Inverse matrix   |
|---|--|
| $\mathbf{A}^+,\mathbf{A}^\dagger$   | Moore-Penrose left pseudoinverse                               |
| $\frac{\mathbf{A}^{T}, \mathbf{A}^{T}, \mathbf{A}^{t}, \mathbf{A}^{t} [39]}{\mathbf{A}^{-T}}$ | Transpose  |
| $\mathbf{A}^{-\top}$  | Transpose of the inverse, i.e.,                                |
|   | $(\mathbf{A}^{-1})^{\top} = (\mathbf{A}^{\top})^{-1} [21, 35]$ |
| <b>A</b> *  | Complex conjugate  |
| $\mathbf{A}^{H}$  | Hermitian  |
| $\ \mathbf{A}\ _{\mathrm{F}}$   | Frobenius norm   |
| A   | Matrix norm  |
| $ \mathbf{A} , \det(\mathbf{A})$  | Determinant  |
| $\operatorname{diag}\left(\mathbf{A}\right)$  | The elements in the diagonal of A                              |
| <b>E</b> [A]  | Vectorization: stacks the columns of                           |
|   | the matrix <b>A</b> into a long column vec-                    |
|   | tor  |
| $\mathbf{E}_d\left[\mathbf{A}\right]$   | Extracts the diagonal elements of a                            |
|   | square matrix and returns them in a                            |
|   | column vector  |
| $\mathbf{E}_{l}\left[\mathbf{A} ight]$  | Extracts the elements strictly below                           |
|   | the main diagonal of a square matrix                           |
|   | in a column-wise manner and returns                            |
|   | them into a column vector                                      |
| $\mathbf{E}_{u}\left[\mathbf{A}\right]$   | Extracts the elements strictly above                           |
|   | the main diagonal of a square matrix                           |
|   | in a column-wise manner and returns                            |
|   | them into a column vector                                      |
| $\mathbf{E}_b\left[\mathbf{A} ight]$  | Block vectorization operator: stacks                           |
|   | square block matrices of the input                             |
|   | into a long block column matrix                                |
| $\operatorname{unvec}\left(\mathbf{A}\right)$   | Reshapes a column vector into a ma-                            |
|   | trix   |
| $\operatorname{tr}\{\mathbf{A}\}$   | trace  |
| $X_{(n)}$   | <i>n</i> -mode matricization of the tensor $\mathcal{X}$       |

## 5.5 Operations with vectors

| $\ \mathbf{a}\ $                   | $l_1$ norm, 1-norm, or Manhattan norm    |
|------------------------------------|--|
| $\ \mathbf{a}\ , \ \mathbf{a}\ _2$ | $l_2$ norm, 2-norm, or Euclidean norm    |
| $\ \mathbf{a}\ _p$                 | $l_p$ norm, $p$ -norm, or Minkowski norm |

| $\ \mathbf{a}\ _{\infty}$ | $l_{\infty}$ norm, $\infty$ -norm, or Chebyshev |
|---------------------------|---|
|                           | norm  |
| diag (a)                  | Diagonalization: a square, diagonal             |
|                           | matrix with entries given by the vec-           |
|                           | $\operatorname{tor} \mathbf{a}$                 |

## 5.6 Decompositions

| Λ  | Eigenvalue matrix [41]                           |
|--|--|
| Q  | Eigenvectors matrix; Orthogonal ma-              |
|  | trix of the QR decomposition[41]                 |
| R  | Upper triangular matrix of the QR                |
|  | decomposition[41]                                |
| U  | Left singular vectors[41]                        |
| $\overline{\mathbf{U}_r}$  | Left singular nondegenerated vectors             |
| $egin{array}{c} \overline{\mathbf{U}_r} \ \overline{\mathbf{\Sigma}} \ \overline{\mathbf{\Sigma}_r} \end{array}$ | Singular value matrix                            |
| $\Sigma_r$   | Singular value matrix with nonzero               |
|  | singular values in the main diagonal             |
| $\Sigma^+$   | Singular value matrix of the pseu-               |
|  | doinverse [41]                                   |
| $\Sigma_r^+$   | Singular value matrix of the pseu-               |
|  | doinverse with nonzero singular val-             |
|  | ues in the main diagonal                         |
| V  | Right singular vectors [41]                      |
| $\overline{\mathbf{V}_r}$  | Right singular nondegenerated vec-               |
|  | tors   |
| $eig(\mathbf{A})$  | Set of the eigenvalues of A [13, 32,             |
|  | 35]  |
| $\overline{[\![\mathbf{A},\mathbf{B},\mathbf{C},\ldots]\!]}$   | CANDECOMP/PARAFAC (CP) de-                       |
|  | composition of the tensor $\mathcal{X}$ from the |
|  | outer product of column vectors of <b>A</b> ,    |
|  | B, C,  |
| $\boxed{\llbracket \boldsymbol{\lambda}; \mathbf{A}, \mathbf{B}, \mathbf{C}, \ldots \rrbracket}$                 | Normalized CANDE-                                |
|  | COMP/PARAFAC (CP) decom-                         |
|  | position of the tensor $\mathcal{X}$ from the    |
|  | outer product of column vectors of               |
|  | $A, B, C, \dots$                                 |
|  |  |

#### 5.7 Spaces and sets

#### 5.7.1 Common spaces and sets

| $\mathbb{R}$   | Set of real numbers   |
|--|---|
| a,b  | Closed interval of a real set from $a$ to                       |
|  | b   |
| (a,b)  | Opened interval of a real set from $a$                          |
|  | to b  |
| $\overline{[a,b),(a,b]}$                               | Half-opened intervals of a real set                             |
|  | from $a$ to $b$   |
| $\mathbb{C}$   | Set of complex numbers  |
| $\mathbb{Z}$   | Set of integer number   |
| $\boxed{\{1,2,\ldots,n\}}$                             | Discrete set containing the integer el-                         |
|  | ements $1, 2, \ldots, n$  |
| $\mathbb{B} = \{0, 1\}$                                | Boolean set   |
| Ø  | Empty set   |
| N  | Set of natural numbers  |
| $\mathbb{K} \in \{\mathbb{R}, \mathbb{C}\}$            | Real or complex space (field)                                   |
| $\mathbb{K}^{I_1 \times I_2 \times \cdots \times I_N}$ | $I_1 \times I_2 \times \cdots \times I_N$ -dimensional real (or |
|  | complex) space  |
| K <sub>+</sub>   | Nonnegative real (or complex) space                             |
|  | [10]  |
| K <sub>++</sub>  | Positive real (or complex) space, i.e.,                         |
|  | $\mathbb{K}_{++} = \mathbb{K}_+ \setminus \{0\} \ [10]$         |
| U  | Universe  |
| $2^A$  | Power set of A  |

#### 5.7.2 Convex sets (or spaces)

| $\mathbb{S}^n$ [15], $\mathcal{S}^n$ [10] | Conic set of the symmetric matrices  |
|---|--|
|   | in $\mathbb{R}^{n \times n}$   |
| $\mathbb{S}^{n\perp}$ [15]                | Conic set of the skew-symmetric  |
|   | (also called antisymmetric) matrices   |
|   | in $\mathbb{R}^{n \times n}$   |
| $\mathbb{S}^n_+,\mathcal{S}^n_+$          | Conic set of the symmetric positive  |
|   | semidefinite matrices in $\mathbb{R}^{n \times n}$ [10]                      |
| $\mathbb{S}^n_{++}, \mathcal{S}^n_{++}$   | Conic set of the symmetric positive  |
|   | definite matrices in $\mathbb{R}^{n \times n}$ , i.e., $\mathbb{S}^n_{++}$ = |
|   | $\mathbb{S}^n_+ \setminus \{0\} \ [10]$                                      |
| $\mathbb{H}^n$                            | Set of all hermitian matrices in $\mathbb{C}^{n\times n}$                    |
| conv C                                    | Convex hull  |
| aff C                                     | Affune hull  |
| $\mathcal{R}$                             | Ray  |
| $\mathcal{H}$                             | Hyperplane   |
| $\mathcal{H}_+, \mathcal{H}$              | Positive/negative halfspace  |
| $B(\mathbf{x}_c, r)$                      | Euclidean ball with radium $r$ and   |
|   | centered at $\mathbf{x}_c$   |

| $\mathcal{E}$  | Ellipsoid                     |
|----------------|-------------------------------|
| $\overline{C}$ | Norm cone                     |
| K              | Proper cone                   |
|                | Dual cone                     |
| $\mathcal{P}$  | Polyhedra                     |
| S              | Simplex                       |
| $C_{\alpha}$   | $\alpha$ -sublevel set        |
| epi $f$        | Epigraph of the function $f$  |
| hypo f         | Hypograph of the function $f$ |

#### 5.7.3 Spaces from matrices or vectors

| $\mathrm{span}\left\{\mathbf{a}_{1},\mathbf{a}_{2},\ldots,\mathbf{a}_{n}\right\}$                  | Vector space spanned by the argument vectors [21]                            |
|--|--|
| $C(\mathbf{A})$ , columnspace( $\mathbf{A}$ ), range( $\mathbf{A}$ ),                              | Columnspace, range or image, i.e.,   |
| $\operatorname{span} \{\mathbf{A}\}, \operatorname{image}(\mathbf{A})$                             | the space span $\{\mathbf{a}_1, \mathbf{a}_2, \dots, \mathbf{a}_n\}$ , where |
|  | $\mathbf{a}_i$ is the ith column vector of the ma-                           |
|  | trix <b>A</b> [33, 41]   |
| $C(\mathbf{A}^{H})$  | Row space (also called left  |
|  | columnspace) [33, 41]  |
| $\overline{N(\mathbf{A})}$ , nullspace( $\mathbf{A}$ ), null( $\mathbf{A}$ ), kernel( $\mathbf{A}$ | Nullspace (or kernel space) [33, 41,   |
|  | 42]  |
| $N(\mathbf{A}^{H})$  | Left nullspace   |
| rank A   | Rank, that is, $\dim(\operatorname{span}\{A\}) =$                            |
|  | $\dim \left( C\left( \mathbf{A}\right) \right) \left[ 33\right]$             |
| nullity (A)  | Nullity of $\mathbf{A}$ , i.e., dim $(N(\mathbf{A}))$                        |

#### 5.8 Set operations

| A + B                  | Set addition (Minkowski sum), i.e.,  |
|------------------------|--|
|                        | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} + \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$ |
|                        | [30]   |
| A - B                  | Minkowski difference, i.e.,  |
|                        | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} = \mathbf{x} - \mathbf{y}, \ \forall \ \mathbf{x} \in \mathcal{X} \land \mathbf{y} \in \mathcal{Y}\}$ |
| $A\ominus B$           | Pontryagin difference, i.e.,   |
|                        | $\{\mathbf{v} \in \mathbb{R}^n \mid \mathbf{v} + \mathbf{y} \in \mathcal{X}, \ \forall \ \mathbf{y} \in \mathcal{Y}\} \ [30]$                        |
| $A \setminus B, A - B$ | Set difference or set subtraction, i.e.,   |
|                        | $A \setminus B = \{x   x \in A \land x \notin B\}$ the set con-  |
|                        | taining the elements of $A$ that are not   |
|                        | in $B$ [38]  |
| $A \cup B$             | Set of union   |
| $A \cap B$             | Set of intersection  |

| $A \times B$                  | Cartesian product   |
|-------------------------------|---|
| $A^n$                         | $A \times A \times \cdots \times A$   |
|                               | n  times  |
| $A^{\perp}$                   | Orthogonal complement of $A$ , e.g.,  |
|                               | $N(\mathbf{A}) = C(\mathbf{A}^{T})^{\perp} [10]$                                      |
| $\mathbf{a} \perp \mathbf{b}$ | a is orthogonal to b  |
| a ⊥ b                         | ${\bf a}$ is not orthogonal to ${\bf b}$  |
| $A \oplus B$                  | Direct sum, i.e., each $\mathbf{v} \in$   |
|                               | $\{\sum \mathbf{a}_i \mid \mathbf{a}_i \in S_i, i = 1, \dots, k\}$ has a              |
|                               | unique representation of $\sum \mathbf{a}_i$ with                                     |
|                               | $\mathbf{a}_i \in S_i$ . That is, they expand to a                                    |
|                               | space. Note that $\{S_i\}$ might not be   |
|                               | orthogonal each other [21]  |
| $A\stackrel{\perp}{\oplus} B$ | Direct sum of two spaces that are or-   |
|                               | thogonal and span a $n$ -dimensional  |
|                               | space, e.g., $C(\mathbf{A}^{T}) \stackrel{\perp}{\oplus} C(\mathbf{A}^{T})^{\perp} =$ |
|                               | $\mathbb{R}^n$ (this decomposition of $\mathbb{R}^n$ is                               |
|                               | called the orthogonal decomposition   |
|                               | induced by $\mathbf{A}$ ) [10]  |
| $\overline{A}, A^c$           | Complement set (given $U$ )   |
| #A,  A                        | Cardinality of A  |
| $a \in A$                     | a is element of A   |
| $a \notin A$                  | a is not element of A   |

## 5.9 Inequalities

| $\mathcal{X} \le 0$             | Nonnegative tensor   |
|---------------------------------|--|
| $\mathbf{a} \leq_K \mathbf{b}$  | Generalized inequality meaning that                          |
|                                 | $\mathbf{b} - \mathbf{a}$ belongs to the conic subset $K$ in |
|                                 | the space $\mathbb{R}^n[10]$                                 |
| $\mathbf{a} \prec_K \mathbf{b}$ | Strict generalized inequality meaning                        |
|                                 | that $\mathbf{b} - \mathbf{a}$ belongs to the interior of    |
|                                 | the conic subset $K$ in the space $\mathbb{R}^n[10]$         |
| $a \le b$                       | Generalized inequality meaning that                          |
|                                 | $\mathbf{b} - \mathbf{a}$ belongs to the nonnegative or-     |
|                                 | thant conic subset, $\mathbb{R}^n_+$ , in the space          |
|                                 | $\mathbb{R}^n$ .[10]   |
| a < b                           | Strict generalized inequality meaning                        |
|                                 | that $\mathbf{b} - \mathbf{a}$ belongs to the positive or-   |

## 6 Communication systems

## 6.1 Common symbols

| В                         | One-sided bandwidth of the base-    |
|---------------------------|-------------------------------------|
|                           | band signal, in Hz                  |
| $\overline{W}$            | One-sided bandwidth of the base-    |
|                           | band signal, in rad/s               |
| $N_0$                     | Noise density, in ???               |
| $x_i$                     | Real or in-phase part of x          |
| $x_q$                     | Imaginary or quadrature part of $x$ |
| $\frac{x_q}{f_c, f_{RF}}$ | Carrier frequency (in Hertz)        |
| $f_L$                     | Carrier frequency in L-band (in     |
|                           | Hertz)                              |
| $f_{IF}$                  | Intermediate frequency (in Hertz)   |
| $f_s$                     | Sampling frequency or sampling rate |
|                           | (in Hertz)                          |
| $T_s$                     | Sampling time interval/duration/pe- |
|                           | riod                                |
| R                         | Bit rate                            |
| T                         | Bit interval/duration/period        |
| $T_c$                     | Chip interval/duration/period       |
| $T_{sy}, T_{sym}$         | Symbol/signaling[36] interval/dura- |
|                           | tion/period                         |
| $s_{RF}$                  | Transmitted signal in RF            |
| SFI                       | Transmitted signal in FI            |

| $s, s_l$  | Lowpass (or baseband) equivalent     |
|---|--------------------------------------|
|   | signal or envelope complex of trans- |
|   | mitted signal                        |
| $r_{RF}$  | Received signal in RF                |
| $r_{FI}$  | Received signal in FI                |
| $r, r_l$  | Lowpass (or baseband) equivalent     |
|   | signal or envelope complex of re-    |
|   | ceived signal                        |
| φ   | Signal phase                         |
| $\phi_0$  | Initial phase                        |
| $\eta_{RF}, w_{RF}$                                     | Noise in RF                          |
| $\eta_{FI}, w_{FI}$                                     | Noise in FI                          |
| $\eta, w$   | Noise in baseband                    |
| τ   | Timing delay                         |
| $\Delta 	au$  | Timing error (delay - estimated)     |
| $\varphi$   | Phase offset                         |
| $\Delta arphi$  | Phase error (offset - estimated)     |
| $egin{array}{c} arphi \ \Delta arphi \ f_d \end{array}$ | Linear Doppler frequency             |
| $\Delta f_d$  | Frequency error (Doppler frequency - |
|   | estimated)                           |
| ν   | Angular Doppler frequency            |
| Δν  | Frequency error (Doppler frequency - |
|   | estimated)                           |
| $\gamma, A$   | Transmitted signal amplitude         |
| $\gamma_0, A_0$   | Combined effect of the path loss and |
|   | antenna gain                         |
|   |                                      |

## 6.2 Fading multipath channels

| $t \stackrel{\mathcal{F}}{\leftrightarrow} \lambda \ [36]$  | Support temporal of the signal. $\lambda$ is obtained after taking the Fourier transform on $t$ .  |
|---|--|
| $\tau \stackrel{\mathcal{F}}{\longleftrightarrow} f \ [36]$ | Second support temporal of the signal $(c(t))$ varies with with the input at the time $\tau$ ). $f$ is obtained after taking the Fourier transform on $\tau$ . |
| $c(t,\tau)$ [36]  | Complex envelope of the channel response at the time $t$ due to an impulse applied at the $t-\tau$   |
| C(f,t) [36]   | Transfer function of $c(t, \tau)$ in $\tau$  |
| $\alpha(t,\tau)$ [36]                                       | Attenuation of $c(t,\tau)$ , i.e., $c(t,\tau) = \alpha(t,\tau)e^{e\pi f_c\tau}$  |

| D ( A4) [26]  | Autocorrelation function of                                   |
|---|---|
| $R_c(\tau_1, \tau_2, \Delta t)$ [36]  |   |
|   | $c(t,\tau)$ , i.e., $R_c(\tau_1,\tau_2,\Delta t) =$           |
|   | $\mathrm{E}\left[c^*(t,\tau_1),c^*(t+\Delta t,\tau_2)\right]$ |
| $R_c(\tau, \Delta t)$ [36]  | Autocorrelation function of $c(t, \tau)$ as-                  |
|   | suming uncorrelated scattering                                |
| $R_c(\tau), R_c(\tau, \Delta t)\Big _{\Delta t=0}$ [36]   | Multipath intensity profile or delay                          |
| ·4-0  | power spectrum  |
| $R_C(\Delta f, \Delta t), R_C(f_1, f_2; \Delta t),$   | Spaced-frequency, spaced-time corre-                          |
| $\mathrm{E}\left[C(f_1,t),C(f_2,t+\Delta t)\right],$  | lation function $(\Delta f = f_2 - f_1)$                      |
| $\mathcal{F}_{\tau}\left\{R_{c}(\tau,\Delta t)\right\}$ [20]  |   |
| $R_C(\Delta f), \qquad R_C(\Delta f, \Delta t)\Big _{\Delta t=0} \qquad [36],$                              | Spaced-frequency correlation func-                            |
| $\mathcal{F}\left\{R_c(\tau)\right\}$ [20]  | tion  |
| $(\Delta f)_c$  | Coherence bandwidth of $c(t)$ , that                          |
|   | is, the frequency interval in which                           |
|   | $R_C(\Delta f)$ is nonzero [36]                               |
| $T_m$   | Multipath spread of the channel, that                         |
|   | is, the time interval in which $R_c(\tau)$ is                 |
|   | nonzero $(T_m \approx 1/(\Delta f)_c)$ [36]                   |
| $ \left. \left$         | Spaced-time correlation function [36]                         |
| $S_C(\lambda)$ [36], $\mathcal{F}\{R_C(\Delta t)\}$ [20]  | Doppler power spectrum  |
| $-(\Delta t)_c$   | Coherence time of $c(t)$ , that is, the                       |
|   | time interval in which $R_C(\Delta t)$ is                     |
|   | nonzero [36]  |
| $B_m$   | Multipath spread of the channel, that                         |
|   | is, the frequency interval in which                           |
|   | $S_c(\lambda)$ is nonzero $(B_d \approx 1/(\Delta t)_c)$ [36] |
| $S_C(\tau, \lambda)$ [36], $\mathcal{F}_{\Delta f, \Delta t} \left\{ R_C(\Delta f, \Delta t) \right\}$ [20] | Scattering function   |
| [ -]  |   |

## 7 Discrete mathematics

## 7.1 Quantifiers, inferences

| $\forall$        | For all (universal quantifier) [23]   |
|------------------|---------------------------------------|
| 3                | There exists (existential quantifier) |
|                  | [23]                                  |
| ∄                | There does not exist [23]             |
| 3!               | There exists an unique [23]           |
| ∃ <sub>n</sub> ∈ | There exists exactly n [38]           |
| €                | Belongs to [23]                       |
| ∉                | Does not belong to [23]               |
| ::               | Because [23]                          |

| <u> ,:</u>  | Such that, sometimes that parenthe-                          |
|-------------|--|
|             | ses is used [23]   |
| $,,(\cdot)$ | Used to separate the quantifier with                         |
|             | restricted domain from its scope, e.g.,                      |
|             | $\forall x < 0 (x^2 > 0) \text{ or } \forall x < 0, x^2 > 0$ |
|             | [23]   |
| :           | Therefore [23]   |

## 7.2 Propositional Logic

| $\neg a$                                    | Logical negation of $a$ [38]                                 |
|---|--|
| $a \wedge b$                                | Conjunction (logical AND) operator                           |
|   | between $a$ and $b[38]$                                      |
| $a \lor b$                                  | Disjunction (logical OR) operator be-                        |
|   | tween $a$ and $b[38]$  |
| $a \oplus b$                                | Exclusive OR (logical XOR) operator                          |
|   | between $a$ and $b[38]$                                      |
| $a \rightarrow b$                           | Implication (or conditional) state-                          |
|   | ment[38]   |
| $a \leftrightarrow b$                       | Bi-implication (or biconditional)                            |
|   | statement, i.e., $(a \rightarrow b) \land (b \rightarrow a)$ |
|   | [38]   |
| $a \equiv b, a \iff b, a \Leftrightarrow b$ | Logical equivalence, i.e., $a \leftrightarrow b$ is a        |
|   | tautology[38]  |

## 7.3 Operations

| a   | Absolute value of $a$  |
|---|--|
| log   | Base-10 logarithm or decimal loga-   |
|   | rithm  |
| ln  | Natual logarithm   |
| $\operatorname{Re}\left\{ x\right\}$        | Real part of x   |
| $\operatorname{Im}\left\{ x\right\}$        | Imaginary part of x  |
| ∠.  | Phase (complex argument)   |
| $x \mod y$                                  | Remainder, i.e., $x - y \lfloor x/y \rfloor$ , for $y \neq 0$              |
| x div y                                     | Quotient [38]  |
| $x \equiv y \pmod{m}$                       | Congruent, i.e., $m \setminus (x - y)$ [38]                                |
| $\operatorname{frac}(x)$                    | Fractional part, i.e., $x \mod 1$ [23]                                     |
| $a \ b \ [23, Section 4.1], \ a \ b \ [38]$ | b is a positive integer multiple of $a \in$                                |
|   | $\mathbb{Z}$ , i.e., $\exists ! \ n \in \mathbb{Z}_{++} \mid b = na$       |
| a \( b \) [23, Section 4.1], a \( b \) [38] | b is not a positive integer multiple of                                    |
|   | $a \in \mathbb{Z}$ , i.e., $\not\exists n \in \mathbb{Z}_{++} \mid b = na$ |

| [·] | Ceiling operation [23] |
|-----|------------------------|
| [.] | Floor operation [23]   |

## 8 Vector Calculus

| $\nabla f[40]$ , grad $f[37]$   | Vector differential operator (Nabla symbol), i.e., $\nabla f$ is the gradient of the scalar-valued function $f$ , i.e., $f$ : $\mathbb{R}^n \to \mathbb{R}$ |
|---|---|
| t,(u,v)   | Parametric variables commonly used, $t$ for one variable, $(u, v)$ for two variables [40]   |
| $\frac{1(x, y, z) [37], \mathbf{r}(x, y, z) [40], x\hat{\mathbf{i}} + y\hat{\mathbf{j}} + z\hat{\mathbf{k}}}{1(t)}$ | Vector position, i.e., $(x, y, z)$ .  |
|   | Vector position parametrized by $t$ , i.e., $(x(t), y(t), z(t))$ [37, 40]   |
| l'(t), dl/dt  | First derivative of $l(t)$ , i.e., the tangent vector of the curve $(x(t), y(t), z(t))$ [40]  |
| $\mathbf{u}(t)[31] \ \mathbf{T}(t)[40], \ \mathrm{dl}(t)[37]$   | Tangent unit vector of $\mathbf{l}(t)$ , i.e., $\mathbf{u}(t) = \mathbf{l}'(t)/ \mathbf{l}'(t) $  |
| $\mathbf{n}(t), \left(\frac{y'(t)}{ l'(t) }, -\frac{x'(t)}{ l'(t) }\right)$   | Normal vector of $\mathbf{l}(t)$ , i.e., $\mathbf{n}(t) \perp \mathbf{T}(t)[40]$  |
| C   | Contour that traveled by $\mathbf{l}(t)$ , for $a \le t \le b$ [40]   |
| L,L(C)  | Total length of the contour $C$   |
|   | (which can be defined the vector  |
|   | I, parametrized by $t$ ), i.e., $L_C = \int_a^b  \mathbf{l}'(t)  dt [40]$   |
| s(t)  | Length of the arc, which can be de-   |
|   | fined by the vector $\mathbf{l}$ and $t$ , that is,   |
|   | $s(t) = \int_{a}^{t}  \mathbf{l}'(u)  du \ (s(b) = L)[40]$  |
| $\mathrm{d}s$   | Differential operator of the length of  |
|   | the contour $C$ , i.e., $ds =  \mathbf{l}'(t)  dt$ [40]   |
| $\int_C f(\mathbf{l})  \mathrm{d}s,  \int_a^b f(\mathbf{l}(t))  \mathbf{l}'(t)   \mathrm{d}t$                       | Line integral of the function $f: \mathbb{R}^n \to$   |
|   | $\mathbb{R}$ along the contour $C$ . In the context   |
|   | of integrals in the complex plane, it is also called "contour integral"   |
| θ [37]  | Angle between the contour $C$ and the vector field $\mathbf{F}$   |
| $\int_C \mathbf{F} \cdot d\mathbf{l}, \ \int_a^b \mathbf{F}(\mathbf{l}(t)) \cdot \mathbf{l}'(t) dt \ [8, 40],$      | Line integral of vector field ${f F}$ along   |
| $\int_C \mathbf{F} \cdot \mathbf{u}  \mathrm{d}s, \int_C \mathbf{F} \cos \theta  \mathrm{d}s $ [37]                 | the contour C   |

| $\int_C \mathbf{F} \cdot d\mathbf{u} \ [37]$   | In the field of electromagnetics, it is common to apply the line integral between the vector field $\mathbf{F}$ and the unit vector $\mathbf{u}(t)$ . Therefore, this line integral may appear as well  |
|--|---|
| $\int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F}, \int_{\mathbf{a}}^{\mathbf{b}} \mathbf{F} \cdot d\mathbf{l}$ | Alternative notation to the line integral, where the parametric variable $t$ goes from $a$ to $b$ , making $r$ goes from $\mathbf{l}(a) = \mathbf{a}$ to $\mathbf{l}(b) = \mathbf{b}$ [8]   |
| $\oint_C, \oint_C$   | Line integral along the closed contour <i>C</i> . The arrow indicates the contour integral orientation, which is counterclockwise, by default. In the context of integrals in the complex plane, it is also called "closed contour integral". |
| $ \#_{S} $   | Surface integral over the closed surface $S$  |
| $\overline{1(u,v)}$  | Vector position $(x(u, v), y(u, v), z(u, v))$ parametrized by $(u, v)$  |
| $\overline{}_{l_u}$  | $\frac{\partial y}{(\partial x/\partial u, \partial y/\partial u, \partial z/\partial u)}$  |
| $\frac{1}{l_{\nu}}$  | $(\partial x/\partial v, \partial y/\partial v, \partial z/\partial v)$   |
| $\mathrm{d}A$  | Differential operator of a 2D area (denoted by $D$ or $R$ ) in the $\mathbb{R}^2$ domain. This differential operator can be solved in different ways (rectangular, polar, cylindric, etc) [40]  |
| D,R  | Integration domain in which dA is integrated, i.e., $\iint_D f  dA$ . R is preferred when the integration domain is a rectangle, while D is used when it has nonrectangular shape [40]  |
| S  | Smooth surface $S \subset \mathbb{R}^3$ , i.e., a 2D area in a 3D space   |
| $\mathrm{d}S$ , $ \mathbf{l}_u \times \mathbf{l}_v  \mathrm{d}A$   | Differential operator of a 2D area in a 3D domain (an surface). Note that $dS =  \mathbf{l}_u \times \mathbf{l}_v  dA$ should be accompanied with the change of the integration interval(from $S$ to $D$ )                                    |
| $A(S), \iint_S \mathrm{d}S, \iint_D  \mathbf{l}_u \times \mathbf{l}_v  \mathrm{d}A$                      | Area of the surface $S$ parametrized by $(u, v)$ , in which $\mathrm{d}A$ is the area defined in the $D$ domain (which is form by the $u$ -by- $v$ graph)   |

| $\mathrm{d}V$   | Differential operator of a shape vol-                             |
|---|---|
|   | ume (denoted by $E$ ) in $\mathbb{R}^3$ domain,                   |
|   | i.e., $\iiint_E dV = V$   |
| E   | Integration domain in which $dV$ is in-                           |
|   | tegrated, i.e., $\iiint_E f  \mathrm{d}V$ [40]                    |
| $V, \iint_D f  \mathrm{d}A, \iiint_E f  \mathrm{d}V$  | Volume of the function $f$ over the re-                           |
| ****  | gions $D$ (in the case of double inte-                            |
|   | grals) or $E$ (in the case of triple inte-                        |
|   | grals)  |
| $\frac{\iint_{S} f  dS, \iint_{D} f  \mathbf{l}_{u} \times \mathbf{l}_{v}   dA}{\mathbf{n}(u, v), \frac{\mathbf{l}_{u}(u, v) \times \mathbf{l}_{v}(u, v)}{ \mathbf{l}_{w}(u, v) \times \mathbf{l}_{v}(u, v) }}$ | Surface integral over $S$   |
| $\mathbf{n}(u,v), \frac{\mathbf{l}_u(u,v)\times\mathbf{l}_v(u,v)}{ \mathbf{l}_u(u,v)\times\mathbf{l}_v(u,v) }$  | Normal vector of of the smooth sur-                               |
| $ \mathbf{i}_{\mathcal{U}}(u,v)\wedge\mathbf{i}_{\mathcal{V}}(u,v) $  | face $S$  |
| $\iint_{\mathbf{S}} \mathbf{F} \cdot \mathbf{n}  \mathrm{d}S$ , $\iint_{\mathbf{S}} \mathbf{F} \cdot \mathrm{d}\mathbf{S}$ ,  | Flux integral of vector field <b>F</b> through                    |
| 66.0  | the smooth surface $S$ ( $\mathbf{n} dS \triangleq d\mathbf{S}$ ) |
| $ \frac{\iint_D \mathbf{F} \cdot (\mathbf{l}_u \times \mathbf{l}_v)  \mathrm{d}A}{\oiint_S \mathbf{F} \cdot \mathbf{n}  \mathrm{d}S, \oiint_S \mathbf{F} \cdot \mathbf{d}S,} $                                  | Flux integral of vector field $\mathbf{F}$ through                |
| $\iint_D \mathbf{F} \cdot (\mathbf{l}_u \times \mathbf{l}_v)  \mathrm{d}A$  | the smooth and closed surface $S$                                 |
| $JJD$ $\langle u \rangle$   | $(\mathbf{n}  \mathrm{d} S \triangleq \mathrm{d} \mathbf{S})$     |
| $\nabla \times \mathbf{F}$ , curl $\mathbf{F}$  | Curl (rotacional) of the vector field <b>F</b>                    |
| $\nabla \cdot \mathbf{F}, \operatorname{div} \mathbf{F}$  | Divercence of the vector field <b>F</b>                           |
| $\nabla^2 f, \nabla \cdot (\nabla f), \Delta f,$  | Scalar Laplacian operator (per-                                   |
| $\frac{\partial^2 f}{\partial x^2} + \frac{\partial^2 f}{\partial y^2} + \frac{\partial^2 f}{\partial z^2}$   | formed on a scalar-valued function                                |
|   | $f: \mathbb{R}^n \to \mathbb{R}$                                  |
| $\nabla^2 \mathbf{F}, \nabla \times \nabla \times \mathbf{F} - \nabla (\nabla \cdot \mathbf{F}), \Delta \mathbf{F},$  | Vector Laplacian operator (per-                                   |
| $(\partial^2 \mathbf{F}/\partial x^2, \partial^2 \mathbf{F}/\partial y^2, \partial^2 \mathbf{F}/\partial z^2)$  | formed on a vector field, i.e., a                                 |
|   | vector-valued function, $\mathbf{F}: \mathbb{R}^n \to$            |
|   | $\mathbb{R}^n$ ). $\nabla^2$ denotes the scalar (vector)          |
|   | Laplacian if the function is scalar-                              |
|   | valued (vector-valued). The notation                              |
|   | $\Delta$ must be avoided as it is overused                        |
|   | in many contexts  |

## 9 Electromagnetic waves

| Electric flux (scalar) (in V m)  |
|----------------------------------|
| Magnetic field vector (in A/m)   |
| Magnetic flux density vector (in |
| $Wb/m^2 = T$                     |
| Magnetic flux                    |
| Free electric charge (in C)      |
| Bound electric charge (in C)     |
| Electric charge (in C)           |
|                                  |

| $\rho_{\mathrm{f}}[1], \rho_{\mathrm{free}}$ [18]                   | Free electric charge density              |
|---|---|
| $\rho_{\rm b}[1], \rho_{\rm bound}$ [18]                            | Electric charge density                   |
| $\rho, \rho_{\rm f} + \rho_{\rm b}$                                 | Electric charge density (it can be        |
| ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,                             | in $C/m^3$ , $C/m^2$ or $C/m$ depending   |
|   | whether it is a volume, surface, or       |
|   | line shapes)                              |
| <b>f</b> [37], <b>F</b> [2]   | Electrostatic force (Coulomb force),      |
|   | $(\text{in kg m/s}^2).$                   |
| ε   | Electric permittivity(in F/m). If the     |
|   | medium is isotropic, it is a scalar. If   |
|   | it is anisotropic, it is a tensor. [37]   |
| $\varepsilon_r$   | Relative electric permittivity or di-     |
|   | electric constant (in F/m) [37]           |
| $arepsilon_0$   | Electric permittivity in vacuum,          |
|   | $8.854 \times 10^{-12} \mathrm{F/m}$ [37] |
| E   | Electric field vector (in V/m)            |
| $\sigma$  | Electric conductivity (in S/m)            |
| J   | Electric current density vector (in       |
|   | $A/m^2$ )                                 |
| $\mathbf{J}_m[14]$  | Magnetization current density vector      |
|   | $(in A/m^2)$                              |
| D   | Electric flux density, electric dis-      |
|   | placement, or electric induction vec-     |
|   | tor (in $C/m^2$ )                         |
| U   | Electric potential energy                 |
| V[3, 14], Φ[37]   | Electric potential (in voltage, V).       |
|   | However, keep in mind that there is       |
|   | a subtle difference between both def-     |
| T [40] // P 10  | initions [4]                              |
| $\Phi_E[19], \oiint_S \mathbf{E}  \mathrm{d}\mathbf{S}$             | Electric flux (in V m)                    |
| $\Phi_D[18], \varPsi[37], \oiint_S \mathbf{D} \mathrm{d}\mathbf{S}$ | Electric flux ( <b>D</b> -field flux)     |
| P   | Electric polarization of the material     |
|   | $(in C/m^2)$                              |
| $\chi_e$  | Electric susceptibility (for linear and   |
|   | isotropic materials)                      |
| μ   | Magnetic permeability                     |
| $\mu_0$   | Magnetic permeability in vacuum           |

## 10 Generic mathematical symbols

|          | Q.E.D.              |
|----------|---------------------|
| <u>_</u> | Equal by definition |

| :=, ←        | Assignment [38] |
|--------------|-----------------|
| <del>_</del> | Not equal       |
| ∞            | Infinity        |
| i            | $\sqrt{-1}$     |

#### 11 Abbreviations

| wrt. | With respect to                     |
|------|-------------------------------------|
| st.  | Subject to                          |
| iff. | If and only if                      |
| EVD  | Eigenvalue decomposition, or eigen- |
|      | decomposition [33]                  |
| SVD  | Singular value decomposition        |
| CP   | CANDECOMP/PARAFAC                   |
